Simple Heuristics that Make Us Smart Gerd Gigerenzer, Peter M. Todd, ABC Research Group, 2000-10-12 Simple Heuristics That Make Us Smart invites readers to embark on a new journey into a land of rationality that differs from the familiar territory of cognitive science and economics Traditional views of rationality tend to see decision makers as possessing superhuman powers of reason limitless knowledge and all of eternity in which to ponder choices To understand decisions in the real world we need a different more psychologically plausible notion of rationality and this book provides it It is about fast and frugal heuristics

simple rules for making decisions when time is pressing and deep thought an unaffordable luxury These heuristics can enable both living organisms and artificial systems to make smart choices classifications and predictions by employing bounded rationality But when and how can such fast and frugal heuristics work Can judgments based simply on one good reason be as accurate as those based on many reasons Could less knowledge even lead to systematically better predictions than more knowledge Simple Heuristics explores these questions developing computational models of heuristics and testing them through experiments and analyses It shows how fast and frugal heuristics can produce adaptive decisions in situations as varied as choosing a mate dividing resources among offspring predicting high school drop out rates and playing the stock market As an interdisciplinary work that is both useful and engaging this book will appeal to a wide audience It is ideal for researchers in cognitive psychology evolutionary psychology and cognitive science as well as in economics and artificial intelligence It will also inspire anyone interested in simply making good decisions
