The Book of New York Firsts Henry Moscow, 1995-04-01 Everything you wanted to know about the unusual arcane and fascinating in the life of New York City The term only in New York takes on new meaning in page after page of this intriguing survey of firsts in one of the world's greatest cities from extraordinary people to ghosts and graves from troubles and aspirations to crimes and disasters For six years the City had a governor who dressed in his wife's

clothes and paraded along Broadway until his soldiers dragged him home The City's first subway dug in secret under Broadway in 1870 had elegant cars propelled by wind from a big fan The City's first settlers were not Dutchmen but French speaking Protestant Belgians in 1624 who were followed by African Blacks in 1625 The first City Hall had a tavern on the premises to quench the thirst of City Fathers with beer and schnapps The City's first bagel was produced in Clinton Street in 1896 but its ancestors date back to fourteenth century German boar hunts Shipbuilding and Shipping Record ,1913

Introduction to Statistical Modelling and Inference Murray Aitkin, 2022-09-30

The complexity of large scale data sets

Big Data has stimulated the development of advanced computational methods for analysing them

There are two different kinds of methods to aid this

The model based method uses probability models and likelihood and Bayesian theory while the model free method does not require a probability model

likelihood or Bayesian theory

These two approaches are based on different philosophical principles of probability theory espoused by the famous statisticians Ronald Fisher and Jerzy Neyman

Introduction to Statistical Modelling and Inference covers simple experimental and survey designs and probability models up to and including generalised linear regression models and some extensions of these including finite mixtures

A wide range of examples from different application fields are also discussed and analysed

No special software is used beyond that needed for maximum likelihood analysis of generalised linear models

Students are expected to have a basic mathematical background in algebra coordinate geometry and calculus

Features Probability models are developed from the shape of the sample empirical cumulative distribution function cdf or a transformation of it

Bounds for the value of the population cumulative distribution function are obtained from the Beta distribution at each point of the empirical cdf

Bayes's theorem is developed from the properties of the screening test for a rare condition

The multinomial distribution provides an always true model for any randomly sampled data

The model free bootstrap method for finding the precision of a sample estimate has a model based parallel the Bayesian bootstrap based on the always true multinomial distribution

The Bayesian posterior distributions of model parameters can be obtained from the maximum likelihood analysis of the model

This book is aimed at students in a wide range of disciplines including Data Science

The book is based on the model based theory used widely by scientists in many fields and compares it in less detail with the model free theory popular in computer science machine learning and official survey analysis

The development of the model based theory is accelerated by recent developments in Bayesian analysis

Cancer Institute ,1983 The Syren & Shipping Illustrated ,1904 Rutter's Child and Adolescent Psychiatry

Anita Thapar, Daniel S. Pine, James F. Leckman, Stephen Scott, Margaret J. Snowling, Eric A. Taylor, 2017-12-26 Rutter's Child and Adolescent Psychiatry is the leading textbook in its field. Both interdisciplinary and international, it provides a coherent appraisal of the current state of the field to help researchers, trainees, and practicing clinicians in their daily work. Integrating science and clinical practice, it is a comprehensive reference for all aspects of child and adolescent psychiatry. New to this full color edition are expanded coverage on classification including the newly revised Diagnostic and Statistical Manual of Mental Disorders DSM 5 and new chapters on systems neuroscience, relationship based treatments, resilience, global psychiatry, and infant mental health. From an international team of expert editors and contributors, this sixth edition is essential reading for all professionals working and learning in the fields of child and adolescent mental health and developmental psychopathology, as well as for clinicians working in primary care and pediatric settings. Michael Rutter has contributed a number of new chapters and a Foreword for this edition. I greatly welcome this new edition as providing both a continuity with the past and a substantial new look. Professor Sir Michael Rutter, extract from Foreword. Reviews of previous editions: This book is by far the best textbook of Child Adolescent Psychiatry written to date. Dr Judith Rapoport, NIH. The editors and the authors are to be congratulated for providing us with such a high standard for a textbook on modern child psychiatry. I strongly recommend this book to every child psychiatrist who wants a reliable, up to date, comprehensive, informative, and very useful textbook. To my mind, this is the best book of its kind available today. Journal of Child Psychology and Psychiatry. *Tobacco* Charles A. Lilley, L. S. Hardin, Thomas H. Delano, Wilfred Pocklington Pond, 1929 The Tobacco Epidemic R. Loddenkemper, M. Kreuter, 2015-03-27 This completely revised and enlarged 2nd edition of The Tobacco Epidemic provides a comprehensive update of the clinical, public health, and political aspects of tobacco smoking. Since its 1st edition in 1997, knowledge on the health hazards of tobacco and nicotine addiction has increased considerably, but recent data has shown that the global problem has become more aggravated in low and middle income countries. If current trends continue, tobacco smoking will be responsible for the deaths of 1 billion people in the 21st century. Written by outstanding international experts, the book covers the history of tobacco production and use, the economics of tobacco use and control, as well as the health consequences of active and passive smoking in both adults and children. Special chapters discuss the impact of media, movies, and TV on tobacco consumption in young people, the patterns and predictors of smoking cessation in the general population, and in different social subgroups, and initiatives supported by the WHO Framework Convention on Tobacco Control. Readers will find the latest information on how nicotine dependence is treated, with nicotine replacement products, what role health care professionals play in helping smokers to quit, and what effects smoke-free environments, advertising bans, and price increases have on smoking prevalence. The potential harms and benefits of smokeless tobacco, waterpipe tobacco smoking, and electronic cigarettes are also evaluated. This book is a must-read for anyone in the medical profession who treats patients.

with smoking related diseases and for those engaged in tobacco control It will also be appreciated by interested nonmedical readers like journalists and legislators Danger Deception Devotion: A Collection of the Firsts in Series Lorhainne Eckhart,2017-09-30
