Feminist Philosophy of Technology Janina Loh,Mark Coeckelbergh,2019-12-31 There has been little attention to feminism and gender issues in mainstream philosophy of technology and vice versa Since the beginning of the so called second wave feminism in the middle of the 20th century there has been a growing awareness of the urgency of a critical reflection of technology and science within feminist discourse But feminist thinkers have not consistently interpreted technology and

science as emancipative and liberating for the feminist movement Because technological development is mostly embedded in social political and economic systems that are patriarchally hierarchized many feminists criticized the structures of dominance marginalization and oppression inherent in numerous technologies Therefore the question of defining and ascribing responsibility in technics and science is essential for this anthology regarding for instance the technological transformation of labor the life in the information society and the relationship between humans and machines The Oxford Handbook of the History of Eugenics Alison Bashford, Philippa Levine, 2010-09-24 Eugenic thought and practice swept the world from the late nineteenth to the mid twentieth century in a remarkable transnational phenomenon that informed social and scientific policy across the political spectrum from liberal welfare measures in emerging social democratic states to feminist ambitions for birth control to public health campaigns to totalitarian dreams of the perfectibility of man This book dispels for uninitiated readers the automatic and apparently exclusive link between eugenics and the Holocaust the popularity of eugenics in Japan for example comes as a surprise It is the first world history of eugenics and an indispensable core text for both teaching and research in what has become a sprawling but ever more important field **Biology and Manners** Regina Yung Lee, Una McCormack, 2020-06-17 This volume of essays continues the establishment of Lois McMaster Bujold as an important author of contemporary science fiction and fantasy It argues persuasively that Bujold's corpus spans the distance between two full arcs of US feminism and has anticipated or responded to several of its current concerns in ways that invite or even require theoretical exploration The fourteen essays collected here provide wide ranging scholarly analyses of Bujold's work and worlds so far covering not only the science fiction and fantasy series but taking into account the wealth of ancillary material inspired by her works such as fan fiction and role playing games Examining the major series through a range of perspectives including feminist readings queer theory and disability studies this volume aims to establish beyond doubt the seriousness of intent behind Bujold's various artistic projects and provide a set of rich readings of this engaging experimental playful and popular author The Palgrave Handbook of Infertility in History Gayle Davis, Tracey Loughran, 2017-09-01 This ground breaking interdisciplinary volume provides an overdue assessment of how infertility has been understood treated and experienced in different times and places It brings together scholars from disciplines including history literature psychology philosophy and the social sciences to create the first large scale review of recent research on the history of infertility Through exploring an unparalleled range of chronological periods and geographical regions it develops historical perspectives on an apparently transhistorical experience It shows how experiences of infertility access to treatment and medical perspectives on this condition have been mediated by social political and cultural discourses The handbook reflects on and interrogates different approaches to the history of infertility including the potential of cross disciplinary perspectives and the uses of different kinds of historical source material and includes lists of research resources to aid teachers and researchers It is an essential go to point for anyone interested in infertility and its history Chapter 19 is

Ryan McCarthy, It seems at times unthinkable that a book like this would have to be written although I am relatively sure that Aldous Huxley foresaw its necessity when he wrote *Brave New World*. But the time has arrived where babies are manufactured in sterile facilities and tested for their fitness for life in the world. While we have not yet advanced sufficiently in biological sciences to entirely forego natural gestation in favor of prenatal programming process which Huxley describes, we have reached the point where those unwanted embryos are set aside, freeze-dried and abandoned or destroyed when they do not meet the standard set for a child. This book affirms the intrinsic goodness of the life of each embryo and explores from the Catholic perspective the possibility of frozen embryo rescue by adoption. It looks at those arguments which see the elements of in vitro fertilization as so contrary to the faith and the natural law as to be irrecoverably intrinsically evil and rejects those in favor of a small and narrow path of adoption to fully re-incorporate a child through the love of a mother and a father into the society which abandoned it.

Protecting Civilians During Violent Conflict Igor Primoratz, David W. Lovell, 2016-04-15 There is almost unanimous agreement that civilians should be protected from the direct effects of violent conflict and that the distinction between combatant and non-combatant should be respected. But what are the fundamental ethical questions about civilian immunity? Are new styles of conflict making this distinction redundant? Eloquenty combining theory and practice, leading scholars from the fields of political science, law and philosophy have been brought together to provide an essential overview of some of the major ethical, legal and political issues with regard to protecting civilians caught up in modern inter and intra state conflicts. In doing so they examine what is being done and what can be done to make soldiers more aware of their responsibilities in this area under international law and the ethics of war and more able to respond appropriately to the challenges that will confront them in the field. *Protecting Civilians During Violent Conflict* presents a clear-eyed look at the dilemmas facing regular combatants as they confront enemies in the modern battlespace and especially the complications arising from the new styles of conflict where enemy and civilian populations merge.

Conceptions of Parenthood Michael W. Austin, 2016-05-23 Our parents often have a significant impact on the content of our beliefs, the values we hold and the goals we pursue and becoming a parent can also have a similar impact on our lives. In *Conceptions of Parenthood* Michael Austin provides a rigorous and accessible philosophical analysis of the numerous and distinct conceptions of parenthood. Issues considered are the nature and justification of parental rights, the sources of parental obligations, the value of autonomy and the moral obligations and tensions present within interpersonal relationships. Austin rejects the proprietarian best interests of the child and biological conceptions of parenthood as failing to

generate parental rights and obligations but considers more sympathetically the custodial relationship consent and causal conceptions of parenthood and ultimately defends a stewardship conception Finally Austin explores the stewardship view for practical and moral questions related to family life and social policy regarding the family such as the education of children the religious upbringing of children and state licensing of parents *Journalism as Practice* Sandra L. Borden,2007-01-01 Sandra Borden examines the moral and strategic implications of applying philosopher Alasdair MacIntyre's 2007 concept of a practice to journalism She believes that MacIntyre's ideas can help us to understand what is at stake for society and for those in newsrooms everywhere who have made journalism their vocation

Regulating Assisted Reproductive Technologies Amel Alghrani,2018-11-22 Reproductive science continues to revolutionise reproduction and propel us further into uncharted territories The revolution signalled by the birth of Louise Brown after IVF in 1978 prompted governments across Europe and beyond into regulatory action Forty years on there are now dramatic and controversial developments in new reproductive technologies Technologies such as uterus transplantation that may enable unisex gestation and babies gestated by dad or artificial wombs that will completely divorce reproduction from the human body and allow babies to be gestated by machines usher in a different set of legal ethical and social questions to those that arose from IVF This book revisits the regulation of assisted reproduction and advances the debate on from the now much discussed issues that arose from IVF offering a critical analysis of the regulatory challenges raised by new reproductive technologies on the horizon
