Abstract. The DECOVALEX Task SAFENET is dedicated to advancing the understanding of fracture nucleation and evolution processes in crystalline rocks, with applications in nuclear waste management and geothermal reservoir engineering. Further improvement of fracture mechanics models is required in two distinct areas. Firstly, there is a need to enhance numerical methods for fracture mechanics under varying thermo-hydro-mechanical (THM) conditions. Secondly, there is a requirement to develop applied tools for performance and safety assessment in the context of nuclear waste management, as well as for reservoir optimisation in geothermal applications. Building on the achievements of SAFENET, which concentrated on benchmarking fracture models and experimental laboratory analyses, SAFENET-2 is dedicated to extending and validating models from the laboratory to the field scale.

This paper gives a detailed description of the work plan for SAFENET-2 of the experimental program and the modeling exercises. The experiments will be carried out at the rock mechanics laboratories of the Universities of Edinburgh and Chongqing. For field data, the STIMTEC experiment at the Reiche Zeche teaching and research mine (Technische Universität Bergakademie Freiberg) is used. The paper gives a detailed description of the individual steps of the task. As a result of SAFENET, the benchmark suite will be made available as interactive exercises via a web portal, thus promoting the concept of open science. The paper will help the teams to organize their work efficiently and also provide an overview and insight to the community.

The Evolution Of The Crystalline Rocks:

The Evolution of the Crystalline Rocks David Kenneth Bailey, R. Macdonald, 1976 In 1928 a new landmark in petrology appeared with the publication of Bowen's *The Evolution of the Igneous Rocks*. There has been an increasing need for a sequel especially to take into account the developments and consequences of high pressure experimentation as the gap between Bowen's book and modern experimental petrology grew apace. This volume treats selected areas in depth and the authors have tried to follow Bowen in producing a perspective view of the subject advances made relating the experiments to geological observations and avoiding as much unfamiliar terminology as possible. This book is a basic text in experimental petrology intended for earth scientists from the undergraduate level onwards.

Hydrogeology of Crystalline Rocks I. Stober, Kurt Bucher, 2013-04-18 Hydrogeology of Crystalline Rocks deals with deep groundwater in the granite and gneiss basement of the continents. It has become evident during the past years that highly mineralized water is present in an interconnected fracture network of the basement. Thus the upper part of the crust of the continents can be viewed as an aquifer and investigated with tools common in hydrogeology. This book presents accounts on water conducting features of crystalline rocks and summarizes the hydraulic properties of the basement. The volume includes reviews, new data and research on the often remarkable chemical composition of deep groundwater. Microbial processes in the deep basement aquifer are probably more important than previously thought. Two contributions focus on this recent extension of research of the biosphere to greater depth in the Earth. This book represents the first multidisciplinary and integrated account of deep groundwater hydrology in crystalline basement. It is of interest to hydrologists and hydrogeologists working with water in crystalline rocks but also to solid earth geophysicists, geochemists and petrologists with an interest in fluids in the crust. Scientists involved in nuclear waste disposal programs and geothermal energy development will find a wealth of stimulating ideas in this volume.
