Heat-Engines J. Alfred Ewing, 2013-06-20 Sir James Alfred Ewing 1855 1935 was a Scottish engineer physicist and cryptographer First published in 1926 as the fourth edition of an 1894 original this book was written by Ewing to present the subject of heat engines in their mechanical as well as their thermodynamical aspects with sufficient fulness for the ordinary needs of University students of engineering The text was extensively revised for this edition taking into account developments in relation to steam turbines steam boilers and internal combustion engines Numerous illustrative figures are also provided This book will be of value to anyone with an interest in Ewing s writings steam engines and the history of engineering

Thermodynamics of Heat Engines Bernard Desmet, 2022-12-28 Optimizing the process of converting heat into mechanical power is a major challenge when it comes to meeting targets for protecting primary energy resources and minimizing our environmental impact For many years to come the use of thermal engines will continue to be necessary for transportation on land by sea and by air as well as for many industrial applications Against this background Thermodynamics of Heat Engines aims to present a comprehensive overview of the thermodynamic concepts including combustion that are necessary for understanding the phenomena governing the energy efficiency of internal and external combustion engines as well as that of gas turbines and jet propulsion engines Existing and developing industrial applications based on combined heat and power CHP or the use of staged cycles are presented with particular attention paid to the recovery of low temperature waste heat This book which is mainly intended for university and engineering students but is also useful for engineers and technicians working in the fields concerned provides a basis for reflection on the optimization of energy systems

The Origin and the Evolution of Firms J.A. Roels, 2012-03 The firms and markets of today s complex socio economic system developed in a spontaneous process termed evolution in just the same way as the universe the solar system the Earth and all that lives upon it Darwin s theory of evolution clearly demonstrated that evolution involved increasing organization As we began to explore the molecular basis of life and its evolution it became equally clear that it depended on the processing and communication of information This book develops a consistent theory of evolution in its wider sense examining the information based laws and forces that drive it Exploring subjects as diverse as economics and the theories of thermodynamics the author revisits the paradox of the apparent conflict between the laws of thermodynamics and evolution to arrive at a systems theory tracing a continuous line of evolving information sets that connect the Big Bang to the firms and markets of our current socio economic system

Carsten Herrmann-Pillath,2013-01-01 This book is an ambitious intellectual enterprise to build a naturalistic foundation for economics with amazingly vast knowledge of physical biological social sciences and philosophy Readers will discover that approaches and insights emergent in institutional studies social neuroscience network theory ecological economics bio culture dualistic evolution etc are persuasively placed in a grand unified frame It is written in a good Hayekian tradition I recommend this book particularly to young readers who aspire to go beyond a narrowly specified discipline in the age of expanding communicability of knowledge and ideas Masahiko Aoki Stanford University US Carsten Herrmann Pillath s new book is an in depth application of natural philosophy to economics that draws up an entirely new framework for economic analysis It offers path breaking insights on the interactions between human economic activity and nature and outlines a convincing solution to the long standing reductionism controversy A must read for everyone interested in the philosophical underpinnings of economics as a science Ulrich Witt Max Planck Institute of Economics Jena Germany Big picture philosophy of economics drifted into a dull cul de sac as it became obsessively focused on falsifiability and rationality In this book Carsten Herrmann Pilath pushes the field back onto the open highway by locating economics in the larger frameworks of metaphysics evolutionary dynamics and information theory This is large scale ambitious synthesis of ideas of the kind we expect from time to time to see devoted to physics and biology Why should economics merit anything less But of course this kind of intellectual tapestry must await the appearance of an unusually devoted scholar with special patience and eccentric independence from the pressure for quick returns that characterizes academic life In the person of Hermann Pilath this scholar has appeared No one who wants to examine economics whole and in its richest context should miss his virtuoso performance in this book Don Ross University of Cape Town South Africa and Georgia State University US Herrmann Pillath s work attempts to bring to bear upon the discipline of economics perspectives from other discourses which have been burgeoning recently namely thermodynamics evolutionary biology and semiotics aiming at a consilience contextualized by economic activity and problems This marks the work as a contemporary example of natural philosophy which is now at the doorstep of a revival The overall perspective is that human economic activity is an aspect of the ecology of the earth s surface viewing it as an evolving physical system mediated through distributed mentality as expressed in technology evolution Knowledge is taken to be physical with a performative function as in Peirce s pragmatism Thus the social meanings of expectations prices and credit are found to be rooted in energy flows The work draws its foundation from Hegel and C S Peirce and its immediate guidance from Hayek Veblen and Georescu Roegen The author generates an energetic theory of economic growth guided by Odum s maximum power principle Economic discourse itself is reworked in the final chapter in light of the examinations of the previous chapters naturalizing economics within an extremely powerful contemporary framework Stanley N Salthe Binghamton University US An Oscar winning performance in the theatre of consilience It s hard

to know which to praise first Carsten Herrmann Pillath's humility or his ambition He says his book is not a great intellectual feat because he pursues the humble task of putting together the ideas of others When he finally gets to economics he tries to be as simple as possible and to conceive of economics in terms of the basics at undergraduate level so to say On the other hand the scale of his ambition is to rethink the foundations of economics from first principles while at the same time holding a running dialogue between contemporary sciences and classic philosophy He's much too modest of course because Foundations is a major achievement but his modesty points to what makes it such a powerful treatise the book is not about his preferences or prejudices it is a scientific approach that aims at establishing truthful propositions about reality That is much harder to achieve than grand theories or complicated mathematics because it amounts to a new modern synthesis of the field an achievement on a par with Julian Huxley's whose own modern synthesis of evolutionary theories in the 1940s allowed for the explosive growth of the biosciences over the next decades The structure of the book is simple enough providing a framework for the naturalistic turn in economics Starting from material existence causation and evolution Herrmann Pillath takes us through four fundamental concepts individuals networks institutions and technology before coming finally to the realm of economics proper i.e. markets However Herrmann Pillath believes that the foundations of economics cannot be found within economics but only in dialogue with other sciences or what he calls the theatre of consilience It's a theatre in which various characters come and go where dialogue ebbs and flows conflicts arise and are resolved and where individual actions can be seen as concepts as leading to higher levels of meaning as the plot unfolds The magic of theatre of course is that the point of intelligibility where the characters' actions and narrative resolve into meaningfulness is projected out of the drama itself into the spectator That's you dear reader So it is with economics as a discipline Economics is a player in a much larger performance about what constitutes knowledge and how we know that It is also a player in the economy it seeks to explain To understand why money firms growth prices markets and other staples of economic thought emerge and function the way they do it is necessary to situate the analysis beyond economics and the economy and to engage with developments across the human evolutionary and complexity sciences This is what Herrmann Pillath does analyzing a breathtaking range of illuminating and sometimes challenging work along the way We are treated to new ideas about the externalized brain the evolution of knowledge in the Earth System i.e. not just among humans the role of signs and performativity in these processes as well as that of energetic transformations But Herrmann Pillath is not satisfied with the modest task of bringing the best of modern scientific thought to bear on economic concepts and performances he really does harbor a deeper purpose The clue is in his apparently quixotic desire to hang on to philosophical insights associated with pre-evolutionary thinkers like Aristotle and Hegel and his apparently eccentric desire to place the semiotic philosophy of C. S. Pierce at center stage But the patient observer will see that he is not seeking to change the facts by imposing idealist notions on them after the event Instead he is arguing for a change in the way we perform ourselves in the

face of these facts He is looking for a modern day equivalent of Confucius or Socrates one who can imagine values and beliefs that define the human species in a new way For those who have eyes to see as the drama unfolds it may be that we have found such a figure in Carsten Herrmann Pillath himself modesty ambition and all This is Cultural Science as it should be done John Hartley Curtin University Australia and Cardiff University UK

Issues in Evolutionary Epistemology Kai Hahlweg, C. A. Hooker, 1989-11-01 This book provides the fullest philosophical examination of theories of evolutionary epistemology now available Here for the first time are found major statements of new theories new applications and many new critical explorations The book is divided into four parts Part I introduces several new approaches to evolutionary epistemology Part II attempts to widen the scope of evolutionary epistemology either by tackling more traditional epistemological issues or by applying evolutionary models to new areas of inquiry such as the evolution of culture or of intentionality Part III critically discusses specific problems in evolutionary epistemology and Part IV deals with the relationship of evolutionary epistemology to the philosophy of mind Because of its intellectual depth and its breadth of coverage *Issues in Evolutionary Epistemology* will be an important text in the field for many years to come
