The Exocrine Pancreas:

The Exocrine Pancreas Stephen J. Pandol, 2011-02-01 The secretions of the exocrine pancreas provide for digestion of a meal into components that are then available for processing and absorption by the intestinal epithelium. Without the exocrine pancreas, malabsorption and malnutrition result. This chapter describes the cellular participants responsible for the secretion of digestive enzymes and fluid that in combination provide a pancreatic secretion that accomplishes the digestive functions of the gland. Key cellular participants: the acinar cell and the duct cell are responsible for digestive enzyme and fluid secretion respectively of the exocrine pancreas. This chapter describes the neurohumoral pathways that mediate the pancreatic response to a meal as well as details of the cellular mechanisms that are necessary for the organ responses including protein synthesis and transport and ion transports and the regulation of these responses by intracellular signaling systems. Examples of pancreatic diseases resulting from dysfunction in cellular mechanisms provide emphasis of the importance of the normal physiologic mechanisms.

Exocrine Pancreatic Insufficiency J. -Matthias Löhr, 2007 The exocrine pancreas synthesizes and secretes more than ten enzymes and proenzymes. Impairment or loss of pancreatic functions results in either partial or complete loss of compensation for most nutrients although a healthy gland secretes ten times the necessary amount of enzymes. Thus as a rule exocrine pancreatic insufficiency manifests itself at a late stage nevertheless it can develop into a clinically significant problem but one which is difficult to diagnose and treat. This compendium presents a summary of the latest state of the art knowledge available concerning the diagnosis and therapy of exocrine pancreatic insufficiency competently and with a view to practical applications. The result is a well balanced and practice oriented reference book which reflects the current state of knowledge on this subject.

Exocrine Insufficiency - ECAB Pramod Kumar Garg,2010-09-29 The exocrine pancreatic function can be impaired by many different pancreatic disease as well as diseases that do not appear to be directly linked to the exocrine pancreas Hormones stimulating exocrine function e g CCK might be reduced in diseases affecting the intestinal mucosa IBD celiac disease AIDS resulting in decreased exocrine secretion The function of digestive enzymes might be affected by post cibal asynchrony or by a decreased intraduodenal pH as in Zollinger Ellison syndrome ZE An atrophy of pancreatic tissue might be caused by a lack of trophic factors as may occur in IDDM and pancreatic damage might occur due to drugs used for the treatment of other diseases While some of these conditions appear to be rather rare and of minor clinical relevance exocrine pancreatic involvement is very frequent in patients with diabetes mellitus The diagnosis of the condition can be made by the exploration of the exocrine pancreatic secretion which has been mainly used for the diagnosis of chronic pancreatitis and detection of pancreatic exocrine insufficiency of any etiology Thus diagnosis of the disease is classically based on the demonstration of either the morphological and or the functional changes that typically develop over time in the course of the disease Exocrine

pancreatic function impairs progressively as chronic pancreatitis develops Thus exocrine pancreatic dysfunction refers to a mild moderate or severe reduction of the exocrine pancreatic secretion Finally pancreatic function becomes insufficient to maintain a normal digestive process Pancreatic exocrine insufficiency refers to the stage of maldigestion and malabsorption of nutrients as a consequence of a primarily and or secondarily impaired exocrine pancreatic function Pancreatic enzymes remain as the cornerstone for the effective treatment of various disease pathologies resulting in pancreatic exocrine insufficiency The rigid criteria set forth by the FDA in the USA will ensure that effective pancreatic enzyme preparations will be available and allow the clinician to successfully treat maldigestion malabsorption vitamin deficiencies protein calorie malnutrition and in selected patients the abdominal pain associated with chronic pancreatitis and PEI Pancreatic enzymes are particularly underused in chronic pancreatitis patients with PEI post gastric and intestinal surgery patients who develop an asynchrony of enzyme delivery to the intestine and pancreatic cancer patients Earlier use of potent pancreatic enzymes will enhance the quality of life for these patients This clinical update has been designed to update the readers on the important aspects of the pancreatic exocrine insufficiency resulting from different conditions and its impact on the patient The book has stressed upon the various aspects of the condition like its etiology diagnosis evaluation and management approach to the patient Overall the book presents to the readers an excellent compilation of clinically applicable literature sourced from the most acclaimed physicians across globe
