Is God a Reality? Carmel Paul Attard,2017-02-10 Why is there something rather than nothing Was there a beginning to our universe or was it always there Everything around us winds down was the universe wound up Is there evidence of design in our universe or was it the result of dumb luck Are there other universes besides ours Is life common in our universe Did life on earth start spontaneously from inanimate matter Is there evidence of intelligence in the living cell Is there enough evidence for evolution Did all life have a universal common ancestor Does thinking emerge from brain complexity Does the self exist or is it just an illusion Can science explain our consciousness Can the soul or self be separated from the body Is there any evidence for an afterlife Is there any positive evidence for the existence of God or is it all inferred Is proposing the existence of a creator pseudoscience Does survival of the fittest imply a malevolent creator Why all this pain and suffering in life Is there any meaning to life Do heaven hell and purgatory exist where are they Is God a Reality is a lifetime study of these questions by a scientist

Shapes of Time in British Twenty-First Century Quantum Fiction Sonia Front,2015-09-04 This book addresses the notion of time and temporality and its various conceptualizations in the theories of the new physics utilized as a thematic and formal framework in the British novel of the twenty first century As the Newtonian conception of reality does not provide a reliable framework within which to situate human experience and generate meaning fiction writers have recognized quantum mechanics as a potent source from which to draw in search of new metaphors The quantum has become a part of the understanding of reality and its concepts and assumptions have been absorbed into the textual structure and content of literary fiction Shapes of Time in British Twenty First Century Quantum Fiction examines human temporality as mediated by the timeshapes imagined within the context of the new physics and explores the philosophical implications for human temporality and identity of situating an individual within the realm of physical time Its chapters deal with various concepts of the new physics connected with temporality and their appropriation in a selected novel parallel universes in Andrew Crumey s Sputnik Caledonia 2008 eternal recurrence and Poincar s theorem in David Mitchell s Cloud Atlas 2004 chaos theory in Samantha Harvey s The Wilderness 2009 and the end of time in Scarlett Thomas s The End of Mr Y 2006 Each of them corresponds to a different conceptual shape of time tree concertina spiral and snapshot respectively which is enacted on the formal level Analyzing the new time constructs in a narrative this book thus uncovers passages between scientific and humanistic standpoints and reveals quantum fiction to be an effective tool for visualizing the subjective non homogenous experience of private time

Ordaining Reality in Brief Joseph E. Donlan,2009 Many people

believe in the Power of Positive Thinking but no one had succeeded in credibly explaining how mere thoughts can tangibly influence future occurrences To explain the connection Joseph Donlan presented highly plausible theories in two preceding books Each of these books presents a new paradigm of nature and couples it with a convincing explanation of how our right brain hemispheres have a unique ability to tap into the hidden domain of the metaphysical This final book in the series also supports these premises however it does so at a higher more condensed level so that readers with no background in science can gain enough information to appreciate the divergent worlds of physics and metaphysics and gain a view of nature that undeniably links mind to matter Dialectics of the Big Bang and the Absolute Existence of the Multiverse Gregory

Phipps,2024-06-11 This interdisciplinary book develops a dialectical narrative about the beginning of the universe by combining Hegel's philosophy with texts about the Big Bang theory Scientific accounts of the Big Bang indicate that the first second of existence was an eventful period in which the universe progressed through six different epochs Bringing together cosmological narratives and Hegel's writings particularly The Science of Logic Gregory Phipps reads this movement as a dialectical progression a sequence of transitions among interlinked concepts like being and nothing finitude and infinitude and space and time Phipps also draws upon Hegel's conception of absolutes to outline a model of the multiverse In doing so he argues that Hegelian readings of the first second offer speculative snapshots of a hypothetical multiverse that contains the full and probably infinite scope of existence Acknowledging the profound impact that the Big Bang theory can produce on understandings of age old philosophical concerns this study importantly brings Hegel's philosophy into dialogue with contemporary science tracing intersections in his speculative thought and the more creative and imaginative dimensions of cosmology For scholars and readers interested in Hegelianism and in the crosscurrents between philosophy science and narrative **The Technological Construction of Reality** Dionysios S. Demetis,Ian O. Angell,2024-07-05 This visionary

When the Son of Man Didn't Come Christopher M. Hays, 2016-06-01 The delay of the Parousia the second coming of Christ has vexed Christians since the final decades of the first century This volume offers a critical constructive and interdisciplinary solution to that dilemma The argument is grounded in Christian tradition while remaining fully engaged with the critical insights and methodological approaches of twenty first century scholars The authors argue that the deferral of Christ's prophesied return follows logically from the conditional nature of ancient predictive prophecy Jesus has not come again because God's people have not yet responded sufficiently to Christ's call for holy and godly action God in patient mercy remains committed to cooperating with humans to bring about the consummation of history with Jesus return Collaboratively written by an interdisciplinary and ecumenical team of scholars the argument draws on expertise in biblical studies systematics and historical theology to fuse critical biblical exegesis with a powerful theological paradigm that generates an apophatic and constructive Christian eschatology The authors however have done more than tackle a daunting theological problem as the group traverses issues from higher criticism through doctrine and into liturgy and ethics they present an innovative approach for how to do Christian theology in the twenty first century academy

The Boundless Sea Gary Y. Okihiro, 2019-09-24 The last book in a trilogy of explorations on space and time from a preeminent scholar *The Boundless Sea* is Gary Y Okihiro's most innovative yet Whereas Okihiro's previous books *Island World* and *Pineapple Culture* sought to deconstruct islands and continents tropical and temperate zones this book interrogates the assumed divides between space and time memoir and history and the historian and the writing of history Okihiro uses himself from Okinawan roots growing up on a sugar plantation in Hawai'i researching in Botswana and teaching in California to reveal the historian's craft involving diverse methodologies and subject matters Okihiro's imaginative narrative weaves back and forth through decades and across vast spatial and societal differences theorized as historical

formations to critique history's conventions Taking its title from a translation of the author's surname *The Boundless Sea* is a deeply personal and reflective volume that challenges how we think about time and space notions of history Elementary Cosmology James J Kolata, 2015-12-01 Cosmology is the study of the origin size and evolution of the entire universe Every culture has developed a cosmology whether it be based on religious philosophical or scientific principles In this book the evolution of the scientific understanding of the Universe in Western tradition is traced from the early Greek philosophers to the most modern 21st century view After a brief introduction to the concept of the scientific method the first part of the book describes the way in which detailed observations of the Universe first with the naked eye and later with increasingly complex modern instruments ultimately led to the development of the Big Bang theory The second part of the book traces the evolution of the Big Bang including the very recent observation that the expansion of the Universe is itself accelerating with time Lawless Universe Joe Rosen, 2010-08-01 In this provocative reassessment of science a physicist questions whether it can ever fully comprehend the entire material universe There is no question that modern science has radically advanced our understanding of nature the universe and even reality itself But in *Lawless Universe* theoretical physicist Joe Rosen takes the scientific method down a peg In his estimation people like Stephen Hawking and Richard Dawkins are wrong to declare that science is on the verge of unlocking all the secrets of the universe Perhaps without realizing it they have crossed into the realm of metaphysics in an attempt to explain the unexplainable Rosen considers the separate but entangled domains of science and metaphysics and examines the all too often ignored boundary between the objective and the subjective He asserts that any understanding of the whole universe if it is to be found at all must come from nonscientific modes of comprehension and insight *Reality and Accounting* Richard Mattessich, 2013-07-31 This book discusses and summarizes the revived interest in reality issues ontology within accounting economics and the information sciences with a view to informing scholars from these different disciplines about each other's endeavours in ontological research Even more importantly the book aims at familiarizing scholars from various disciplines with an evolutionary approach for examining questions about reality in the social sciences The book is based on a partly pluralistic approach that assures unity in diversity Unity because all existence arises from physical reality diversity because emergent properties create biological and social realities that cannot be reduced to physical phenomena Hence the book recognizes not only concrete but also abstract entities It shows however that the actualization of these abstract entities requires objectification and concrete manifestation This pluralistic approach is central to this book It also is a challenge to those who reject abstract entities as socially real as well as to those who defend a non realist position The major task of this book is to explore proposals towards a uniform ontological basis This uniform and universal presentation extends beyond traditional ontology asking what is real to such questions as on which reality level is something real and in which temporal and modal way is it real Such an extended analysis is relevant to accountants economists information scientists other social scientists as well as philosophers
