Advertising Research: The Internet, Consumer Behavior, and Strategy George Zinkan, 2012 Closing Methodological Divides K.R. Howe, 2006-04-18 The issues I treat in this book qualitative versus quantitative methods facts versus values science versus politics subjectivity versus objectivity postmodernism versus pragmatism to name a few are at the core of a lively sometimes divisive conversation that has been unfolding in the theory and practice of educational research for some time These issues fall squarely within the province of philosophy and thus philosophical investigation has an especially useful contribution to make But these issues are by no means the exclusive province of philosophy they are ones in which a diverse group of educational theorists have had a keen interest and about which they have had important things to say The conversation I hope to join and to move forward is this broad and inclusive one Philosophy of education is at its best when it dives headlong into the fray The book borrows liberally from my previously published work but is far from a simple compilation The ideas developed in Chapter 7 On the Threat of Epistemological Bias are new The ideas developed in Chapter 9 Toward Democratic Educational Research are a significant extension of the application of similar ideas to evaluation research The ideas developed in Chapter 4 The Persistence of the Fact Value Dogma are in a form and at a level of detail not published before Finally Chapter 1 Introduction and Overview weaves together my thinking on a large array of issues on educational research methodology that had only been loosely connected before

Compatible and Incompatible Relationships W. Ickes, 2012-12-06 Several years ago two of my colleagues and I had the opportunity to interview Fritz Heider perhaps the most influential theorist in the field of social psychology Harvey Ickes Kidd 1976 During our interview Heider affirmed a belief that had guided his career since the 1920s the belief that the study of human relationships is the most important task in which social scientists can engage Although many social scientists would profess to share this belief it is nonetheless true that the study of human relationships has been one of the most neglected tasks in the history of the social sciences including psychology What Heider found in the 1920s that most psychologists acknowledged the importance of studying human relationships but at the same time tended to focus their own research on more tractable topics such as memory and cognition is still very much evident in the 1980s Even within the more specific domain of social psychology a majority of researchers still choose to address those hybrid topics social cognition social categorization and stereotyping person memory etc that relate most directly to traditional areas of psychological research Still other researchers while choosing to study such important interpersonal phenomena as altruism aggression conflict and

interpersonal attraction tend to focus so exclusively on these isolated and abstracted phenomena that they fail to provide a more inclusive view of the relationships in which these phenomena occur The Attribution of Blame K.G.

Shaver,2012-12-06 How can we identify the causes of events What does it mean to assert that someone is responsible for a moral affront Under what circumstances should we blame others for wrongdoing The related but conceptually distinct issues of causality responsibility and blameworthiness that are the subject of this book play a critical role in our everyday social encounters As very young children we learn to assert that it wasn't my fault or that I didn't mean to do it Responsibility and blame follow us into adulthood as personal or organizational failings require explanation Although judgments of moral accountability are quickly made and adamantly defended the process leading to those judgments is not as simple as it might seem Psychological research on causality and responsibility has not taken complete advantage of a long tradition of philosophical analysis of these concepts Philosophical discussions for their part have not been sufficiently aware of the psychological realities An assignment of blame is a social explanation It is the outcome of a process that begins with an event having negative consequences involves judgments about causality personal responsibility and possible mitigation The result can be an assertion or a denial of individual blameworthiness The purpose of this book is to develop a comprehensive theory of how people assign blame **Methodology and Epistemology for Social Sciences** Donald T. Campbell,1988-10-27

Selections from the work of an influential contributor to the methodology of the social sciences He treats measurement experimental design epistemology and sociology of science each section introduced by the editor Samuel Overman

Amabile,2012-12-06 The ideas presented in this book have been incubating for over 25 years I was in the first grade I believe when the ideas that eventually developed into this social psychology of creativity first began to germinate The occasion was art class a weekly Friday afternoon event during which we were given small reproductions of the great masterworks and asked to copy them on notepaper using the standard set of eight Crayola crayons I had left kindergarten the year before with encouragement from the teacher about developing my potential for artistic creativity During these Friday afternoon exercises however I developed nothing but frustration Somehow Da Vinci's Adoration of the Magi looked wrong after I finished with it I wondered where that promised creativity had gone I began to believe then that the restrictions placed on my artistic endeavors contributed to my loss of interest and spontaneity in art When as a social psychologist I began to study intrinsic motivation it seemed to me that this motivation to do something for its own sake was the ingredient that had been missing in those strictly regimented art classes It seemed that intrinsic motivation as defined by social psychologists might be essential to creativity My research program since then has given considerable support to that notion As a result the social psychology of creativity presented in this book gives prominence to social variables that affect motivational orientation
