The Evolution of Institutional Economics Geoffrey M Hodgson, 2004-03-04 This exciting new book from Geoffrey Hodgson is eagerly awaited by social scientists from many different backgrounds This book charts the rise fall and renewal of institutional economics in the critical analytical and readable style that Hodgson s fans have come to know and love and that a new generation of readers will surely come to appreciate

The Evolution of Cognition Cecilia M. Heyes, Ludwig Huber, 2000 In the last decade evolutionary psychology has come to refer exclusively to research on human mentality and behavior motivated by a nativist interpretation of how evolution operates This book encompasses the behavior and mentality of nonhuman as well as human animals and a full range of evolutionary approaches Rather than a collection by and for the like minded it is a debate about how evolutionary processes have shaped cognition The debate is divided into five sections Orientations on the phylogenetic ecological and psychological comparative approaches to the evolution of cognition Categorization on how various animals parse their environments how they represent objects and events and the relations among them Causality on whether and in what ways nonhuman animals represent cause and effect relationships Consciousness on whether it makes sense to talk about the evolution of consciousness and whether the phenomenon can be investigated empirically in nonhuman animals and Culture on the cognitive requirements for nongenetic transmission of information and the evolutionary consequences of such cultural exchange Contributors Bernard Balleine Patrick Bateson Michael J Beran M E Bitterman Robert Boyd Nicola Clayton Juan Delius Anthony Dickinson Robin Dunbar D P Griffiths Bernd Heinrich Cecilia Heyes William A Hillix Ludwig Huber Nicholas Humphrey Masako Jitsumori Louis Lefebvre Nicholas Mackintosh Euan M Macphail Peter Richerson Duane M Rumbaugh Sara Shettleworth Martina Siemann Kim Sterelny Michael Tomasello Laura Weiser Alexandra Wells Carolyn Wilczynski David Sloan Wilson

The Evolution of Memory Systems Elisabeth A. Murray, Steven P. Wise, Kim S. Graham, 2016-10-27 Current theories about human memory have been shaped by clinical observations and animal experiments This doctrine holds that the medial temporal lobe subserves one memory system for explicit or declarative memories while the basal ganglia subserves a separate memory system for implicit or procedural memories including habits Cortical areas outside the medial temporal lobe are said to function in perception motor control attention or other aspects of executive function but not in memory The Evolution of Memory Systems advances dramatically different ideas on all counts It proposes that several memory systems arose during evolution and that they did so for the same general reason to transcend problems and exploit opportunities encountered by specific ancestors at particular times and places in the distant past Instead of classifying cortical areas in terms of mutually exclusive perception executive or memory functions the authors show that all cortical areas contribute to memory and that they do so in their own ways using specialized neural representations The book also presents a proposal on the evolution of explicit memory According to this idea explicit declarative memory depends on interactions between a phylogenetically ancient navigation

system and a representational system that evolved in humans to represent one's self and others. As a result, people embed representations of themselves into the events they experience and the facts they learn, which leads to the perception of participating in events and knowing facts.

The Evolution of Memory Systems is an important new work for students and researchers in neuroscience, psychology, and biology. [The Evolution of Parental Care](#) Mathias Kölliker, 2012-08-09. Parental care includes a wide variety of traits that enhance offspring development and survival. It is taxonomically widespread and is central to the maintenance of biodiversity through its close association with other phenomena such as sexual selection, life history, evolution, sex allocation, sociality, cooperation, and conflict, growth and development, genetic architecture, and phenotypic plasticity. This novel book provides a fresh perspective on the study of the evolution of parental care based on contributions from some of the top researchers in the field. It provides evidence that the dynamic nature of family interactions and particularly the potential for co-evolution among family members has contributed to the great diversity of forms of parental care and life histories across as well as within taxa. **The Evolution of Parental Care** aims to stimulate students and researchers alike to pursue exciting new directions in this fascinating and important area of behavioural and evolutionary biology. It will be of relevance and use to those working in the fields of animal behaviour, ecology, evolution, and genetics, as well as related disciplines such as psychology and sociology.

The Evolution of Agency Michael Tomasello, 2022-09-06. A leading developmental psychologist proposes an evolutionary pathway to human psychological agency. Nature cannot build organisms biologically prepared for every contingency they might possibly encounter. Instead, Nature builds some organisms to function as feedback control systems that pursue goals, make informed behavioral decisions about how best to pursue those goals in the current situation, and then monitor behavioral execution for effectiveness. Nature builds psychological agents. In a bold new theoretical proposal, Michael Tomasello advances a typology of the main forms of psychological agency that emerged on the evolutionary pathway to human beings. Tomasello outlines four main types of psychological agency and describes them in evolutionary order of emergence. First was the goal-directed agency of ancient vertebrates, then came the intentional agency of ancient mammals, followed by the rational agency of ancient great apes, ending finally in the socially normative agency of ancient humans. Each new form of psychological organization represented increased complexity in the planning, decision making, and executive control of behavior. Each also led to new types of experience of the environment and, in some cases, of the organism's own psychological functioning, leading ultimately to humans' experience of an objective and normative world that governs all of their thoughts and actions. Together, these proposals constitute a new theoretical framework that both broadens and deepens current approaches in evolutionary psychology.

[Technological Change and the Evolution of Corporate Innovation](#) Birgitte Andersen, 2001-01-01. Birgitte Andersen revisits in a modern context the ideas of Kuznets on technological growth paths but emphasises the structural variety in patenting, where earlier authors focused on aggregate trends. This is an important contribution for scholars interested in the interface between the recent history of

The Evolution of Massive Stars Chūshirō Hayashi, Robert C. Cameron, 1962 Computations are made for the evolution of a population I star of 15.6 solar masses and an age zero composition of hydrogen concentration $X = 0.90$ helium concentration $Y = 0.08$ and the concentration of the remaining elements $Z = 0.02$ through four phases 1 hydrogen exhaustion in the convective core 2 gravitational contraction of the core 3 helium burning 4a the onset of carbon burning 4b the onset of neon burning in the absence of a preceding carbon burning phase This discussion builds upon the model treated by Sakashita Ono and Hayashi It is assumed there is no mass loss from the stellar surface no mixing except in the convective core and the opacity of the star is due entirely to electron scattering Radiation pressure is taken fully into account

The Evolution of Mammalian Characters D. M. Kermack, 2013-03-09 This book is not intended to give a full and comprehensive account of the Mesozoic mammals and nor is it intended as a handbook for research workers studying pre Tertiary mammals Our intention is to give an account of the origin and evolution of certain of the characters of the Mammalia We have tried to portray the fossils we describe as the living animals they once were not as dead bones Our account ends with the end of the Lower Cretaceous since by that time the major characters of the mammals had become established There exist a number of characters which at the present day are confined to the Mammalia These include 1 a jaw articulation formed by the squamosal and the dentary 2 a chain of three bones malleus incus and stapes connecting the tympanic membrane to the inner ear 3 the presence of hair or fur 4 the presence of milk glands in the female 5 the left aortic arch is the systemic arch 6 the phalangeal formula in both manus and pes is 2 3 3 3 7 some of the teeth have more than one root Of these characters 1 or 2 are sufficient by themselves to define a mammal characters 6 and 7 are known to have been already in existence in some of the mammal like reptiles the ancestors of the mammals

The Evolution of Exudativory in Primates Anne M. Burrows, Leanne T Nash, 2010-09-11 I first became involved in research into primate behavior and ecology in 1968 over 40 years ago driven by a quest for a better understanding of the natural context of primate evolution At that time it was virtually unknown that primates can exploit exudates as a major food source I was certainly unaware of this myself By good fortune I was awarded a postdoctoral grant to work on lemurs with Jean Jacques Petter in the general ecology division of the Muséum National d'Histoire Naturelle in Brunoy France This provided the launching pad for my first field study of lesser mouse lemurs in Madagascar during which I gained my initial inklings of exudate feeding It was also in Brunoy that I met up with Pierre

Charles Dominique who introduced me to pioneering observations of exudate feeding he had made during his field study of five loriform species in Gabon This opened my eyes to a key feeding adaptation that has now been reported for at least 69 primate species in 12 families Smith Chap 3 almost 20% of extant primate species So exudativory is now firmly established as a dietary category for p mates alongside the long recognized classes of faunivory including insectivory frugivory and folivory Soon after I encountered Charles Dominique he published the first synthetic account of his Gabon field study in a French language journal Charles Dominique 1971 *The Evolution of Technology* George Basalla,1988 Three emerging themes challenge the popular notion that technology advances through the efforts of a few who produce a series of revolutionary inventions that owe little or nothing to the technological past *The Evolution of Religion* Edward Caird,1893
