Guide to the Universe Richard Harshaw, 2007-09-06 This is without doubt the largest and most comprehensive atlas of the universe ever created for amateur astronomers It is the first major observing guide for amateurs since Burnham's Celestial Handbook With finder charts of large scale and unprecedented detail in both normal and mirror image views for users of the ubiquitous Meade and Celestron Schmidt Cassegrain telescope ranges and an extensive list of 14 000 objects it will provide a detailed observing guide for almost any practical amateur astronomer up to the most advanced Spanning some 3 000 pages this is a project that is possible only with Springer Extra Materials <http://extras.springer.com> The atlas covers the whole range of objects viewable by amateur astronomers with 8 to 11 inch telescopes from latitude approx 40 degrees The projected total number of objects is currently 13 238 compared with Burnham's approximately 5 000 double stars in three volumes This is much more than just a catalog of objects As planned the atlas will have about 270 double star images and sketches and 590 or so deep sky images and sketches Comparisons with other atlases are invidious but Tirion's atlas and Uranometria for example don't go as deep in magnitude and the scale is unsuitable for star hopping in the eyepiece where the action REALLY takes place The charts in the Complete CD Atlas of the Universe and the scale they are on allow the user to get enough detail to easily find the objects described In addition mirror image charts are supplied for instruments with reverse fields all SCTs This is also much more than planetarium software Many planetarium programs do not have good object databases and those that do have databases that are too large for practical field use For example TheSky one of the most popular and best programs can display the entire Washington Double Star Catalog some 120 000 doubles but 90% of these are not resolvable or even viewable from certain horizons and there is no way to determine that by looking at the screen The result is that there are more objects plotted on the screen than you can actually see and the clutter makes it very hard to find what you want The pages on Springer Extra Materials are extensively indexed and referenced for quick location of objects areas classes of objects etc The accompanying book gives an introduction to the Atlas showcases the maps thus buyers can see what they are getting without visiting Springer Extra Materials describes the Springer Extra Materials content and organization and includes various appendices **Reference Sources for Small and Medium-sized Libraries** Jovian Lang, 1992 This

classified annotated bibliography updates the standard sources needed by most small and medium sized libraries for answering reference questions and improving collections The brief succinct annotations provide complete ordering information which may make this a valuable tool for busy librarians *NASA EP*. United States. National Aeronautics and Space Administration,1982 *Best Science and Technology Reference Books for Young People* Harold Robert Malinowsky,1991 Guide lists reference books in physical applied and natural sciences and technology for readers from elementary school age to young adults Includes prices where reviewed annotations and subject terms
