Operations Research and Environmental Management Carlo Carraro,Alain Haurie,2012-12-06 The activities of the Fondazione ENI Enrico Mattei cover a broad spectrum of research topics ranging from economics to engineering from environmental management at the industry or regional level to basic mathematical modeling research It is the combination of the activities on these last two topics that led the Fondazione to organise with the University of Geneva a work shop where operation research tools were designed with the aim to provide national and local policy makers with appropriate analytical and policy instruments for environmental management In the recent past attention has often been devoted to global environmental issues in which the level of policy making is either international through multi country agreements on emission control or national when environmental policies are designed to control domestic pollution Many environmental problems however have a local or regional dimension Even when their dimension is global e g in the case of the greenhouse gas effect relevant decisions on emission control such as the adoption of energy saving utilities are taken at the local level In many countries the current legislation imposes the local authorities to prepare plans and adopt measures to control energy consumption or to reduce waste of natural resources It is therefore important to analyze the way in which local or regional authorities optimise their environmental management

The idea of ecological modernisation originated in Western Europe in the 1980s gaining attention around the world by the late 1990s At the core of this social scientific and policy oriented approach is the view that contemporary societies have the capability of dealing with their environmental crises Experiences in some countries demonstrate that modern institutions can incorporate environmental interests into their daily routines Elsewhere economic and political interests dominate development trajectories and environmental deterioration continues challenging the premises of ecological modernisation This volume brings together research on ecological modernisation practices around the world Studies on Western Central and Eastern Europe the USA and Southeast Asia examine the applicability of this approach to advanced industrial countries transitional economies and developing countries respectively Authors critically examine the premises of ecological modernisation theory assess its value for understanding past and present environmental transformations and outline paths for designing future sustainable development Taken together the studies in collected this volume offer significant refinements extensions and critiques of ecological modernisation theory and suggest important directions for future research on social and policy dimensions of environmental change **Motivating Change: Sustainable Design and Behaviour in the Built Environment** Robert Crocker,Steffen Lehmann,2013-07-24

I highly recommend this book to all economists It is well written informative and a pleasure to read The first chapter in particular Inspiring Dismal or Boring Economics should be made required reading for all graduate students in economics and even more so for their professors especially at leading universities in the United States Yew Kwang Ng Journal of Economic Literature Instead of ignoring the challenge to rational behaviour posed by several anomalies in behaviour or abandoning rationality in the face of this challenge Bruno Frey s Inspiring Economics provides a valuable extension of rational behaviour to incorporate these anomalies This is an exhilarating study that I strongly recommend to everyone including those like myself who believe that

the importance of these anomalies are sometimes exaggerated Gary S Becker Stanford University US Bruno Frey is one of a number of modern economists who believe as I do that economics should be importing rather than exporting ideas from elsewhere in the social sciences In these sparkling essays he shows that rational choice theory is enriched and sometimes revised by taking account of non monetary rewards and incentives With Frey economics once again becomes an inspiring behavioural science Mark Blaug University of London and University of Buckingham UK Economics can be inspiring often taking a stand against convention achieving challenging results discussing unorthodox viewpoints and suggesting new policies Bruno S Frey illustrates what he perceives to be the inspirational quality of economics and how this differs from the type of economics studied in many academic institutions He introduces insights into economics from a psychological perspective dealing with issues such as transformation of anomalies identification in democracy and crowding effects and focuses on intrinsic motivation and how it is undermined Inspiring Economics also looks at the integration of economics and politics covering topics including popular initiatives and referenda authoritarian nations and foreign aid and the way in which the cost of war is reflected on the capital market This groundbreaking empirical study of human motivation and behaviour will be a fascinating read for those interested in economics and economic theory **Natural Disasters** P. Public Participation and Better Environmental Decisions Frans H. J. M. Coenen, 2008-12-12

Public Participation and Better Environmental Decisions is about a specific promise that participation holds for environmental decision making Many of the arguments for public participation in inter national environmental policy documents are functional that is to say they see public participation as a means to an end Sound solutions to environmental problems require participation beyond experts and political elites Neglecting information from the public leads to legitimacy questions and potential conflicts There is a discourse in the literature and in policy practice as to whether decision making improves in quality as additional relevant information by the public is considered The promise that public participation holds has to be weighed against the limitations of public participation in terms of costs and interest conflicts The question that Public Participation and Better Environmental Decisions seeks to answer for academics planners and civil servants in all environmental relevant policy fields is What restricts and what enables information to hold the promise that public participation lead to better environmental decision making and better outcomes

Taking Sustainable Cities Seriously, second edition Kent E. Portney, 2013-01-11 A theoretically driven comparison of sustainability programs in American cities updated with the latest research and additional case studies Today most major cities have undertaken some form of sustainability initiative Yet there have been few systematic comparisons across cities or theoretically grounded considerations of what works and what does not and why In Taking Sustainable Cities Seriously Kent Portney addresses this gap offering a comprehensive overview and analysis of sustainability programs and policies in American cities After

discussing the conceptual underpinnings of sustainability he examines the local aspects of sustainability considers the measurement of sustainability and offers an index of serious sustainability for the fifty five largest cities in the country examines the relationship between sustainability and economic growth and discusses issues of governance equity and implementation He also offers extensive case studies with separate chapters on large medium size and small cities and provides an empirically grounded analysis of why some large cities are more ambitious than others in their sustainability efforts This second edition has been updated throughout with new material that draws on the latest research It also offers numerous additional case studies a new chapter on management and implementation issues and a greatly expanded comparative analysis of big city sustainability initiatives Portney shows how cities use the broad rubric of sustainability to achieve particular political ends and he dispels the notion that only cities that are politically liberal are interested in sustainability Taking Sustainable Cities Seriously draws a roadmap for effective sustainability initiatives **Taking**

Sustainable Cities Seriously Kent E. Portney, 2002-11-22 Today at least twenty five major U S cities have pursued some form of sustainability initiative Although many case studies and how to manuals have been published there has been little systematic comparison of these cities programs and initiatives In this book Kent Portney lays the theoretical groundwork for research on what works and what does not and why Distinguishing cities on the basis of population characteristics and region for his analysis Portney shows how cities use the broad rubric of sustainability to achieve particular political ends Cities that take sustainability seriously such as Portland San Francisco and Seattle use broad definitions that go well beyond concern for the physical environment or creating jobs They pursue sustainability at many levels and integrate concern for economic development the environment and quality of life across all activities of city government Cities that take sustainability less seriously such as Cleveland Boston and Orlando confine it to such issues as solid waste disposal brownfields redevelopment and neighborhood beautification Still other cities such as New Haven Brownsville and Milwaukee do considerably less to work toward sustainability Portney begins by reviewing the conceptual underpinnings of sustainable development and sustainable communities The comparisons that follow provide a foundation for assessing the range of what is possible and desirable for sustainability initiatives In the book s conclusion Portney assesses the extent to which cities can use the pursuit of sustainability either to foster change in public values or merely to reinforce values that are already reflected in systems of governance **Management of Environmental Problems and Hazards in Nigeria** Smart N.

Uchegbu, Harold Chike, C.A. Udeh, 2017-11-28 This unique collection of essays examines the environmental problems facing contemporary Nigeria The relationship between environmental degradation and such social issues as poverty and pollution growth has been impressively analyzed There is also a well researched discussion on how government and citizens can work towards achieving sustainable development with long term solutions to ecological disorders This book provides a valuable resource for academics and professionals in the general area of environmental management as well as those searching for

long term solutions to Nigeria's particular ecological disorders *Environmental Concerns and Sustainable Development*
Sakarama Somayaji, Ganesha Somayaji, 2009-01-01 At the dawn of this 21st century environmental concerns have received utmost attention from all segments of human society. The extreme abuse of nature and ruthless hunt for material happiness are the reasons for post enlightenment destruction of the environment. Many consider the issues related to environmental degradation as an environmental crisis. During the last century humans have been exploiting nature not merely for need but also for greed. Environmentally concerned individuals call for immediate action to stop being greedy and act positively. In India too this environmental awareness is fast spreading and the Honourable Supreme Court of India has directed the Central and state governments to introduce courses regarding environmental issues at all levels of education. This book is a compilation of research results pertaining to development environment and sustainable development in the form of articles.
