Memory and Affect in Development Charles A. Nelson, 2014-02-25 As in recent years a thematic concept was selected over a general one for the 26th annual Minnesota Symposium on Child Psychology In this case the relation between memory and affect was targeted for two reasons The first concerned the a priori theoretical relation between these content areas The second concerned the observation that memory and affect have historically been studied as separate content areas an unfortunate decision considering the potential of each area to inform the other To redress this investigators working on the relation between memory and affect were identified Their presentations are also anchored by one or two presentations on either memory or affect Those familiar with the broader domain of developmental psychology will readily identify this volume in the series as filling the void left by the lack of integration across domains of study Infant Social Cognition Michael E. **Child Effects on Adults** Richard Q. Bell, Lawrence V. Harper, 2020-09-10 It is usual to consider the effects parents have on children this title originally published in 1977 reverses the focus and reveals a subject every bit as important and interesting The authors both professional psychologists present their findings under three major headings History Theories and Research Approaches and Concepts and Findings that discuss the social psychological and biological influences children exert on parents Bell and Harper oppose the intellectual apartheid that prevents behavioural scientists from investigating the continuity of interaction processes from other animals to man and include substantial research findings in mammalian biology to show more precisely the reciprocal relations between parents and their offspring Their bidirectional approach to the study of child rearing is meant to offset empirical prejudices that had so far dominated child care sciences at the time
