Spencer Jr., M. Tomizuka, C.B. Yun, W.M. Chen, R.W. Chen, 2008-06-23 Research in smart materials and structures seeks to apply multifunctional capabilities of new and existing materials to develop structures and systems that are capable of self sensing and monitoring self diagnosis and prognosis with intelligence self healing and repair and adaptive response to prevent loss of human life and catastrophe to minimize maintenance and life cycle costs and to prolong service life This book provides the critical knowledge and technological bases required for meeting one of the ultimate engineering challenges the design and construction of smart structures and systems **Adaptronics and Smart Structures** Hartmut Janocha, 2013-11-11 Adaptronics is the term encompassing technical fields that have become known internationally under the names smart materials intelligent structures and smart structures Adaptronics contributes to the optimisation of systems and products It bridges the gap between material and system or product and incorporates the search for multi functional materials and elements and their integration in systems or structures The authors of this book have taken on the task of displaying the current state of the art in this fascinating field The system components actuators sensors and controllers technical fundamentals materials design rules and practical solutions are all described Selected sample applications are also presented and current development trends are demonstrated **Fiber Optic Smart Structures and Skins** Eric Udd, 1989 New Developments in Dam Engineering Martin Wieland, Qingwen Ren, John S.Y. Tan, 2014-05-14 The development of water resources is a key element in the socio economic development of many regions in the world Water availability and rainfall are unequally distributed both in space and time so dams play a vital role there being few viable alternatives for storing water Dams hold a prime place in satisfying the ever increasing demand for power irrigation and drinking water for protection of man property and environment from catastrophic floods and for regulating the flow of rivers Dams have contributed to the development of civilization for over 2 000 years Worldwide there are some 45 000 large dams listed by ICOLD which have a height over 15 meters Today in western countries where most of the water resources have been developed the safety of the existing dams and measures for extending their economical life are of prime concern In developing countries the focus is on

the construction of new dams The proceedings of the 4th International Conference on Dam Engineering includes contributions from 18 countries and provides an overview of the state of the art in hydropower development new type dams new materials and new technologies dam and environment Traditional areas such as concrete dams and embankment dams methods of analysis and design of dams dam foundation seismic analysis design and safety stability of dam and slope dam safety monitoring and instrumentation dam maintenance and rehabilitation and heightening are also considered The book is of special interest to scientists researchers engineers and students working in dam engineering dam design hydropower development environmental engineering and structural hydraulics
