The Entropy Law And The Economic Process:

The Entropy Law and the Economic Process Nicholas Georgescu-Roegen, 1971 In the ultimate analysis man struggles for low entropy and economic scarcity is the reflection of the Entropy Law which is the most economic in nature of all natural laws Thermodynamics itself is presented by the author as the physics of economic value and mans economic activity as analogous though not identical to that of the purposive sorting of the famous Maxwellian demon Economic activity is in fact an extension and a complement of mans biological evolution In it man can use exosomatic organs i e organs with which he is not endowed biologically but which have evolved through a process of mutation selection and diffusion similar to that of biological evolution For wherever there is evolution the author argues there is the work of the Entropy Law with its irrevocable qualitative Change This point leads the author to an extensive examination of the limitations of arithmomorphic models in all sciences He argues that no complete description of reality no philosophical argument not even that of the ultrapositivists no creative thought can dispense with dialectical concepts and reasoning which he views somewhat differently from Hegel The tight knit excursus ends with an analysis of some general economic issues from that of the analytical representation of a process to that of social conflict The author argues that because of the very nature of exosomatic evolution the social conflict will last under any regime as long as there is a human society Publisher s description

The entropy law and the economic process Nicholas Georgescu - Roegen, **The entropy law and the economic process** Nicholas Georgescu-Roegen, 1976 **THE ENTROPY LAW AND THE ECONOMIC PROCESS. BY NICHOLAS GEORGESCU-ROEGEN.** Nicholas Georgescu-Roegen, 1974 **The Entropy Law and the Economic Process /Nicholas Georgescu-Roegen** Nicholas Georgescu-Roegen, 1971 **Ideology, Social Theory, and the Environment** William D. Sunderlin, 2003 Does human population growth threaten the environment or does it guarantee we will safeguard it Is economic growth the key ecological problem or is it in fact the solution What will be the leading force to save the planet civil society government or private enterprise This book shows that these polemical debates are governed not so much by access to facts as they are by the political ideology of the expert advancing a particular argument Moreover the thoughts of these experts tend to be based largely in just one of three competing streams of political thought the left the center or the right Drawing on social theory the author explains the philosophical origins of this tendency to rely on just one of three traditions and why this poses a serious obstacle to conceptualizing the cause nature and resolution of environmental problems Sunderlin argues that laying the foundation for a livable world involves giving conscious and dedicated attention to the core tenets of all three political traditions action against class inequality and advocacy of social justice within and among countries reformation of laws and policies emanating from the halls of power and technological innovation in centers of research and wholesale cultural change and promotion of individual initiative responsibility and creativity **Valuing the Earth, second edition** Herman E. Daly, Kenneth N. Townsend, 1992-11-24 Valuing the Earth collects more than twenty

classic and recent essays that broaden economic thinking by setting the economy in its proper ecological and ethical context. They vividly demonstrate that contrary to current macroeconomic preoccupations continued growth on a planet of finite resources cannot be physically or economically sustained and is morally undesirable. Among the issues addressed are population growth, resource use, pollution, technology, east and west, energy, and economic growth. Their common theme is the notion popular with classical economists from Malthus to Mill that an economic stationary state is more healthful to life on earth than unlimited growth. A number of essays in the first edition have become classics and have been retained for this edition which adds six new essays. Contributors: Kenneth E Boulding, John Cobb, Herman E Daly, Anne H Ehrlich, Paul R Ehrlich, Nicholas Georgescu Roegen, Garrett Hardin, John P Holdren, M King Hubbert, C S Lewis, E F Schumacher, Gerald Alonzo Smith, T H Tietenberg, Kenneth N Townsend.

The Economic Process Carmine Gorga, 2010. This book transports the reader from the world of mainstream economics in which the object of observation is The Market exchange to a world in which the object of observation is the economic process. Both producer and consumer must respectively be legitimate owners of real wealth and monetary wealth.

The Origin of Wealth Eric D. Beinhocker, 2006. Beinhocker has written this work in order to introduce a broad audience to what he believes is a revolutionary new paradigm in economics and its implications for our understanding of the creation of wealth. He describes how the growing field of complexity theory allows for evolutionary understanding of wealth creation in which business designs co evolve with the evolution of technologies and organizational innovations. In addition to giving his audience a tour of this field of complexity economics he discusses its implications for real world issues of business.

Physis, Biopower, and Biothermodynamics Enrique Leff, 2024-04-16. Building upon the idea that our current environmental question arises from the history of metaphysics which privileged thought about Being or ontology over the conditions of life, this book reinterprets Heraclitus's notion of physis as the fundamental emergent potency of life as the category to be thought by thinkers. In so doing it deconstructs the interpretation offered by Heidegger and so stresses the struggle between the creative force of life and its subjection to the human Logos or meaning. Physis understood as the pre ontological potentiality of life itself thus becomes the cornerstone of a materialist philosophy of life. Following engagements with the work of Nietzsche, Foucault, and Janicaud to explore the significance of human intervention into the realm of life via the will to power, biopower, and the power of rationality respectively, the author explores twentieth century rearticulations of the concept of physis through a range of developments in biothermodynamics thus grounding a new philosophy of life and a new bioeconomics in a revisited biothermodynamics centered on the concept of negentropy. An extensive engagement with the history and development of thought about the generative force of life on Earth. Physis, Biopower, Biothermodynamics and Bioeconomics. The Fire of Life will appeal to scholars of philosophy, social theory, and political theory with interests in environmental thought, political ecology, and questions of sustainability.

Ranking Economic Performance and Efficiency in the Global Market: Emerging Research and Opportunities Gussen, Benjamin Franklen, 2017-08-10. There

are numerous determinants that drive and influence economic efficiency in contemporary nations Critical insights can be gained from developing analytical models to understand the economies of the world Ranking Economic Performance and Efficiency in the Global Market Emerging Research and Opportunities is an innovative source of scholarly information that discusses world rankings of modern national economies Including a range of topics such as geopolitics sovereignty and jurisdictional considerations this book is ideally designed for academics researchers professionals and students interested in the relevant knowledge that can be extracted from the determinants of economic efficiency *Hearings, Reports and Prints of the Joint Economic Committee* United States. Congress. Joint Economic Committee,1975 The Barcelona School of Ecological Economics and Political Ecology Sergio Villamayor-Tomas,Roldan Muradian,2023-02-28 In this open access book ecological economics and political ecology traditions converge into a single academic school The book constitutes a common ground where multiple and critical voices are expressed covering a broad scope of urgent matters at the crossroad between society economy and the natural environment The manuscripts composing this compendium offer appealing material for both experienced and younger researchers interested in interdisciplinary exchanges in the field of the social environmental sciences It combines historical accounts with recent theoretical and empirical developments revolving around the interaction between three foundational notions of the Barcelona School social metabolism environmental justice and self reflective science *U.S. Economic Growth from 1976 to 1986: The limits to growth* ,1976 **U.S. Economic Growth from 1976 to 1986** ,1976 **Environment and Ecology in the History of Economic Thought** Vitor Eduardo Schincariol,2024-07-05 This volume proposes a reconsideration of ecological and environmental aspects of the work and ideas of various heterodox authors and traditions in the history of economic thought including the field of economic development Many of the contributors to this book focus on thinkers and works which are not typically considered as part of the ecological sphere while others consider such economists in a new light or domain Thus the book elucidates a new and useful research field of reconsidering ecological dimensions in the traditional history of economic thought as well as helping to delineate alternative views for ongoing debates on ecological themes Did Veblen Keynes Sraffa C Furtado and other key economists and schools of thought of our age have relevant and useful insights with respect to environmental issues Which aspects of their intellectual legacies should eventually be discarded in the face of our new environmental challenges On the contrary what aspects of their economic theories can be updated and adapted to a better interpretation of our present ecological concerns How do they differ and why The essays contained in this book will help to answer these questions by means of recovering analysing and updating the work of some of the most relevant heterodox economists and schools of thought of our time This book will be of great interest for readers in the history of economic thought ecological economics environmental economics and economic development **More Heat than Life: The Tangled Roots of Ecology, Energy, and Economics** Jeremy Walker,2020-07-14 This book traces the interacting histories of the disciplines of ecology and economics from their common

origin in the ancient Greek concept of oikonomia through their distinct encounters with energy physics to the current obstruction of neoliberal economics to responses to the ecological and climate crisis of the so called Anthropocene. Reconstructing their constitution as separate sciences in the era of fossil fuelled industrial capitalism the book offers an explanation of how the ecological sciences have moved from a position of critical collision with mainstream economics in the 1970s to one of collusion with the project of permanent growth in and through the thermal crisis of the biosphere.

Enlarging economic doctrine United States. Congress. House. Committee on Interstate and Foreign Commerce. Subcommittee on Energy and Power, 1976 *Marx and the Earth* John Bellamy Foster, Paul Burkett, 2016-01-12 A decade and a half ago John Bellamy Foster and Paul Burkett introduced a new revolutionary understanding of the ecological foundations of Marx's thought demonstrating that Marx's concepts of the universal metabolism of nature, social metabolism and metabolic rift prefigured much of modern systems ecology. Ecological relations were shown to be central to Marx's critique of capitalism including his value analysis. Now in *Marx and the Earth* Foster and Burkett expand on this analysis in the process of responding to recent ecosocialist criticisms of Marx. The result is a full fledged anti critique pointing to the crucial roles that dialectics, open system thermodynamics, intrinsic value and aesthetic understandings played in the original Marxian critique, holding out the possibility of a new red-green synthesis.

Energy and Economic Myths Nicholas Georgescu-Roegen, 2014-05-18 *Energy and Economic Myths: Institutional and Analytical Economic Essays* is a collection of materials that deal with various issues and concerns in economics. The title aims to clarify the misconception in economics. The first part of the text deals with the issues in natural resources and the economics of production. Next the selection tackles the problems in institutional economics. Part III covers the epistemological and methodological concerns in economics. The title also talks about economic theories. The book will be of great interest to economists and readers who want to enhance their understanding of economic concepts.
