Humanitarian Crises and Migration Susan F. Martin, Sanjula Weerasinghe, Abbie Taylor, 2014-04-24 Whether it is the stranding of tens of thousands of migrant workers at the Libyan Tunisian border or the large scale displacement triggered by floods in Pakistan and Colombia hardly a week goes by in which humanitarian crises have not precipitated human movement While some people move internally others internationally some temporarily and others permanently there are also those who become trapped in place unable to move to greater safety Responses to these crisis migrations are varied and inadequate Only a fraction of crisis migrants are protected by existing international regional or national law Even where law exists practice does not necessarily guarantee safety and security for those who are forced to move or remain trapped

Improvements are desperately needed to ensure more consistent and effective responses This timely book brings together leading experts from multi disciplinary backgrounds to reflect on diverse humanitarian crises and to shed light on a series of exploratory questions In what ways do people move in the face of crisis situations Why do some people move while others do not Where do people move When do people move and for how long What are the challenges and opportunities in providing protection to crisis migrants How might we formulate appropriate responses and sustainable solutions and upon what factors should these depend This volume is divided into four parts with an introductory section outlining the parameters of crisis migration conceptualizing the term and evaluating its utility This section also explores the legal policy and institutional architecture upon which current responses are based Part II presents a diverse set of case studies from the earthquake in Haiti and the widespread violence in Mexico to the ongoing exodus from Somalia and environmental degradation in Alaska and the Carteret Islands among others Part III focuses on populations that may be at particular risk including non citizens migrants at sea those displaced to urban areas and trapped populations The concluding section maps the global governance of crisis migration and highlights gaps in current provisions for crisis related movement across multiple levels This valuable book brings together previously diffuse research and policy issues under the analytical umbrella of crisis migration It lays the foundations for assessing and addressing real challenges to the status quo and will be of interest to scholars policy makers and practitioners committed to seeking out improved responses and ensuring the dignity and safety of millions who move in the context of humanitarian crises

Assessing Vulnerability to Global Environmental Change Richard J. T. Klein, Anthony G. Patt, 2012-05-16 Assessing the vulnerability of human populations to global environmental change particularly climate change is now the main imperative of research and international action However much of the research into vulnerability is not designed to feed directly into decision making and policy creating a gap between the knowledge created by researchers and what is required by decision makers This book seeks to rectify this problem and bridge the gap It discusses vulnerability as the central theme and brings together many different applications from disaster studies climate change impact studies and several other fields and provides the most comprehensive synthesis of definitions theories formalization and applications to date illustrated with examples from different disciplines regions and periods and from local through to regional national and international levels Case study topics cover sea level rise vulnerability to changes in ecosystem services assessing the vulnerability of human health and double exposure to climate change and trade liberalization amongst other issues Research outcomes stress that science policy dialogues must be transparent to be effective and concentrate on a mutual understanding of the concepts used A key research finding is that the most useful information for decision makers is that which shows the separate causes and drivers of vulnerability rather than presenting vulnerability in an aggregated form The book concludes with a unifying framework for analysing integrated methodologies of vulnerability assessment and guiding how research and policy can be linked to reduce vulnerability

Writing Environments

Sidney I. Dobrin, Christopher J. Keller, 2012-02-01 *Writing Environments* addresses the intersections between writing and nature through interviews with some of America's leading environmental writers. Those interviewed include Rick Bass, Cheryl Glotfelty, Annette Kolodny, Max Oelschlaeger, Simon J. Ortiz, David Quammen, Janisse Ray, Scott Russell Sanders, Edward O. Wilson, and Ann H. Zwinger. From the standpoints of activists, scientists, naturalists, teachers, and highly visible writers, the interviewees consider how different environments have influenced them, how their writing affects environments, and the ways readers experience environments. The interviews are followed by critical responses from writing scholars. This diverse range of voices speaks lucidly and captivantly about topics such as place, writing, teaching, politics, race, and culture, and how these overlap in many complex ways.

The Sage Handbook of Peace and Conflict Studies Maia Carter Hallward, Ji Eun Kim, Cécile Mouly, Timothy Seidel, Zubairu Wai, 2025-06-07 *The Sage Handbook of Peace and Conflict Studies* offers a comprehensive exploration of the complexities of violence, conflict, and peace from a global interdisciplinary perspective. The handbook addresses the traditional Western-centric approach while emphasizing the need to integrate Global South perspectives to create a more inclusive and transformative understanding of peace and conflict. While important voices in peace and conflict studies have long stressed the need to not only address direct violence but also structural and cultural, one certain strand of the field has upheld conservative knowledge production and reinforced unequal power structures. This volume seeks to challenge these biases by foregrounding critical and decolonial approaches that emphasize gender, race, culture, global history, and political economy. Its diverse chapters invite us to question mainstream assumptions and promote a broader, more inclusive analysis of peace and conflict. The handbook explores the evolution of the field, highlighting the impact of historical events and the role of oppositional knowledge in political change. It offers a critical overview of theoretical approaches, emphasizing reflexivity, inclusivity, and the importance of local actors in peace and conflict dynamics. Additionally, it examines how cultural and disciplinary assumptions shape peacebuilding and conflict transformation and critiques traditional global narratives on issues like governance, climate change, and human rights. Finally, the handbook presents real-world case studies that integrate themes of decoloniality, race, gender, and power inequalities across diverse global contexts. By centering the Global South and integrating interdisciplinary perspectives, this handbook provides valuable insights for scholars and practitioners committed to fostering a more equitable and just world.

Christian Green,2019-05-19 A shared interest of law and religion is the advancement of human flourishing yet there is no common understanding of what it means for humans to flourish and the means by which to attain a flourishing life The concept of human flourishing is especially important for Africa where community and national development compete with forces of conflict and scarce resources In the broadest sense the concept of human flourishing focuses our attention on having a comprehensively good or worthwhile life but various religious and legal traditions suggest different norms for measuring the quality of life and designing the institutional structures that could best facilitate and preserve it *The Environmental Humanities* Robert S. Emmett,David E. Nye,2017-10-13 A concise overview of this multidisciplinary field presenting key concepts central issues and current research along with concrete examples and case studies The emergence of the environmental humanities as an academic discipline early in the twenty first century reflects the growing conviction that environmental problems cannot be solved by science and technology alone This book offers a concise overview of this new multidisciplinary field presenting concepts issues current research concrete examples and case studies Robert Emmett and David Nye show how humanists by offering constructive knowledge as well as negative critique can improve our understanding of such environmental problems as global warming species extinction and over consumption of the earth's resources They trace the genealogy of environmental humanities from European Australian and American initiatives also showing its cross pollination by postcolonial and feminist theories Emmett and Nye consider a concept of place not synonymous with localism the risks of ecotourism and the cultivation of wild areas They discuss the decoupling of energy use and progress and point to OECD countries for examples of sustainable development They explain the potential for science to do both good and harm examine dark visions of planetary collapse and describe more positive possibilities alternative practices including localization and degrowth Finally they examine the theoretical impact of new materialism feminism postcolonial criticism animal studies and queer ecology on the environmental humanities *Getting the Climate Science Facts Right* Medani P. Bhandari,2022-09-01 *Getting the Climate Science Facts Right* discusses climate change science with reference to the Intergovernmental Panel on Climate Change IPCC Addressing climate change is the most important public priority of the 21st Century Unlike many issues however this issue is being driven by both science and its interface with

politics The main institution for bridging this division between science and international politics is the IPCC As such it is the main source of the facts from which climate change policy is developed This book describes the ways in which the IPCC arrives at these facts and so can be sure they are complete and evidence based Seldom in history has science had such a direct relationship with politics The negotiation of an international policy regime requires at its outset an agreement on the facts In this case the facts are scientific complex and contentious Governments have recognized this and have by using the IPCC set up institutional machinery to provide facts from a source and in a manner that they can accept The way in which the IPCC functions is unique in that it melds the way in which science achieves consensus with the way governments do at the international level Starting with a process to examine review and debate scientific findings leading to a consensus about scientific fact usually expressed as probabilities that the findings will hold over time the IPCC then concludes by using the kind of consensus development mechanism that the United Nations typically uses to achieve agreements leading to the formation of policy regimes The book examines the structure of the IPCC its composition and its procedures in order to achieve an understanding of its role and future

Immigration Law and Policy in Brazil Luciane B. D.

Pivetta,2020-11-04 Brazilian immigration policy faced some deep changes in the last few years due to the development of a new legal system regarding this matter The previous migration law date back from the 1980s during a totalitarian civil military regime and despite the rebirth of democracy in 1988 this law remained in place for almost four decades Because of that historical moment the past immigration policy was focused on national public security and economic development In contrast the current law established human rights as one of the principles and guidelines of the Brazilian migration policy Therefore this book debates the extent to which a shift in the immigration law in Brazil has happened moving away from the perspective of immigrants as threats towards seeing them as subjects of rights
