The Environment Preserving The Future:

The Human Right to a Green Future Richard P. Hiskes, 2009 This book presents an argument for establishing environmental human rights as the legitimate possession of both present and future generations It uses these rights to clean air water and soil to make an argument for justice across generations that is for recognizing the obligation that present generations have to preserve the environment and natural resources for future generations **Protecting future generations through commons** Saki Bailey, Gilda Farrell, Ugo Mattei, 2014-01-09 The recent austerity measures currently adopted in numerous European countries assume that a rise in public debt should automatically result in cuts to social programmes and the privatisation of inefficiently managed resources This type of reasoning is being used to justify the destruction of social rights of citizens for the profit of the private sector resulting in more limited access to the most fundamental resources such as water nature housing culture knowledge and information mainly for the most vulnerable members of society Such a view informed solely by short term growth and profit cycles is endangering access to those resources not only for current generations but for future ones as well This book is an attempt to go beyond liberal approaches to intergenerational and distributive justice It emphasises the role of commons and communities of the commons driven by the desire to defend and perpetuate those fundamental resources under the threat of expropriation by the state and the market This book also offers policy makers and citizens who wish to accept their political responsibility by being active and refusing corporate ideology some best practices as well as methods and solutions for renewing the configurations of societal relationships through commons thereby integrating the interests of future generations in the European Community s decision making processes and institutions This is a contribution by the Council of Europe and the International University College of Turin to the protection of the dignity of every person especially of those who even though unable to enjoy existing social rights have the right to benefit from choices and policies that ensure that human life remains unspoiled **Climate Change and Future Eco-Friendly Schools for Sustainable Development of the Environment** Dr. Priyanka Jha, Mr. Ashish Kumar Jha, 2025-02-26 Revolutionizing Indian Law: Trends, Challenges And Future Directions Ms. Sangeeta Aarya, 2025-05-03 This book provides a comprehensive exploration of the Indian legal system tracing its historical evolution and the influence of colonial rule It delves into the structure of India s judiciary legislature and Constitution highlighting fundamental rights judicial review and legal reforms Covering contemporary trends it examines technological advancements in law corporate regulations environmental legislation and human rights protections The book also addresses key challenges such as corruption gender justice and access to legal education With discussions on emerging legal fields landmark cases and policy reforms it serves as a valuable resource for students professionals and policymakers shaping India s legal future *Multicultural and Religious Perspectives on Protecting the Environment, the Biosphere, and Biodiversity* Joseph Tham, John Lunstroth, Sameer Advani, 2025-09-30 This thought provoking volume unites bioethics experts from seven major

world religions Buddhism Christianity Confucianism Daoism Hinduism Islam and Judaism alongside secular thinkers to explore environmental protection through the lens of the UNESCO Declaration on Bioethics and Human Rights It foregrounds the power of diverse perspectives in addressing one of humanity's most pressing challenges the ecological crisis The contributions provide rich and distinct religious and cultural viewpoints as they confront the anthropological ethical and social dimensions of this crisis Showcasing dialogue where traditions and philosophies collide they offer unique insights into global bioethics and human rights that should inspire new ways of thinking and foster meaningful collaboration in the fight for our planet's future The book is valuable reading for researchers scholars and students in bioethics environmental ethics religious studies and beyond

Environmental Rights Steve Vanderheiden, 2017-07-05 The essays selected for this volume present critical viewpoints from the debate about the need to establish rights on behalf of greater environmental protection Three main areas for developing environmental rights are surveyed including extensionist theories that link existing rights for example to subsistence or territory to threats of harm from exacerbated resource scarcity pollution or rapid environmental change proposals for rights to specified environmental goods or services such as rights to a safe environment and the capacity to assimilate greenhouse gas emissions and rights that protect the interests of parties not currently recognized as having rights including nonhuman subjects natural objects and future generations This volume captures the potential for and primary challenges to the development of rights as instruments for safeguarding the planet's life support capacities and features proposals and analyses which argue the need to create an avenue of recourse against ecological degradation whether on behalf of human or nonhuman right holders Economy & Ecology: Towards Sustainable Development F. Archibugi, Peter Nijkamp, 2013-03-09 After a period of relative silence recent years have been marked by an upswing of interest in environmental issues The publication of the report of the World Commission on Environment and Development on Our

Common Future 1987 has acted as a catalyst for a revival of the environmental awareness not only regarding local and daily pollution problems but also and in particular regarding global environmental decay and threats to a sustainable development. In a recent study by W M Stigliani et al on Future Environments for Europe Executive Report 15 IIASA Laxenburg 1989 the environmental implications of various alternative socioeconomic development pathways with respect to eleven environmental issues that could become major problems in the future are analysed. These issues include Managing water resources in an era of climate change Acidification of soils and lakes in Europe Long term forestry management and the possibility of a future shortfall in wood supply Areas of Europe marginalized by mainstream economic and agricultural development Sea level rise Chemical pollution of coastal waters Toxic materials buildup and the potential for chemical time bombs Non point source emissions of potentially toxic substances Transportation growth versus air quality Decreasing multifunctionality of land owing to urban and suburban land development Increasing summer demand for electricity and the impact on air quality.
