[The Environmental Crisis and Art](#) Eva Maria R  pple, 2019-02-12 Climate change is a defining issue of our time for which the immediate as well as potential future scope causes enormous impediments to human understanding and comprehension It is argued here that humans ought to make wise use of their capacity of thinking language and communication in working on the task of responsible action Required is nothing less than moving out of thoughtlessness an unresponsiveness and ignorance in particular towards certain environmental problems As human beings we are a species on this planet that is uniquely capable to think and foresee potential consequences and hold power to induce change on our actions It is up to human beings to confront challenges such as climate change to consider what has been critically assessed in thought and reflect on potential responses Crucial in this dialog is the ability to take the standpoint of the other including that of species as well as ecosystems in human imagination It also means to develop a sensibility for the other in making sense of the world that today is largely shaped by humans Throughout history narratives stories images artistic expressions have all played a key role for imaginative ventures that allow the mind to imagine the past present and the future Language and communication can serve comprehension of an issue like climate change and provide a path in developing responsible responses to abstract problems of complex global future dimensions

Liberty and the Ecological Crisis Katie Kish, Christopher Orr, Bruce Jennings, 2019-11-27 This book examines the concept of liberty in relation to civilization s ability to live within ecological limits Freedom in all its renditions choice thought action has become inextricably linked to our understanding of what it

means to be modern citizens And yet it is our relatively unbounded freedom that has resulted in so much ecological devastation Liberty has piggy backed on transformations in human nature relationships that characterize the Anthropocene increasing extraction of resources industrialization technological development ecological destruction and mass production linked to global consumerism This volume provides a deeply critical examination of the concept of liberty as it relates to environmental politics and ethics in the long view Contributions explore this entanglement of freedom and the ecological crisis as well as investigate alternative modernities and more ecologically benign ways of living on Earth The overarching framework for this collection is that liberty and agency need to be rethought before these strongly held ideals of our age are forced out On a finite planet our choices will become limited if we hope to survive the climatic transitions set in motion by uncontrolled consumption of resources and energy over the past 150 years This volume suggests concrete political and philosophical approaches and governance strategies for learning how to flourish in new ways within the ecological constraints of the planet Mapping out new ways forward for long term ecological well being this book is essential reading for students and scholars of ecology environmental ethics politics and sociology and for the wider audience interested in the human Earth relationship and global sustainability *Environmental Education and Advocacy* Edward A. Johnson, Michael J. Mappin, 2005-03-03 Environmental education has often blurred the distinction between ecological science and environmental advocacy Growing public awareness of environmental problems and desire for action may be contributing to this blurring There is a need to clarify the distinction between the role of ecological science and the role of social and political values for the environment within environmental education This book addresses this need by examining the changing perspectives of ecology in education and the changing perspectives of education in environmental education Guidelines are provided for assessing the science and education perspectives within environmental education along with suggested frameworks for development of programs and resources that integrate current science education and action This book will be of interest to environmental educators ecologists interested in environmental education and curriculum and resource developers

Artificial Intelligence and the Environmental Crisis Keith Ronald Skene, 2019-12-19 A radical and challenging book which argues that artificial intelligence needs a completely different set of foundations based on ecological intelligence rather than human intelligence if it is to deliver on the promise of a better world This can usher in the greatest transformation in human history an age of re integration Our very existence is dependent upon our context within the Earth System and so surely artificial intelligence must also be grounded within this context embracing emergence interconnectedness and real time feedback We discover many positive outcomes across the societal economic and environmental arenas and discuss how this transformation can be delivered Key Features Identifies a key weakness in current AI thinking that threatens any hope of a better world Highlights the importance of realizing that systems theory is an essential foundation for any technology that hopes to positively transform our world Emphasizes the need for a radical new approach to AI based on ecological systems Explains why ecosystem intelligence not human intelligence offers the best framework for AI Examines how this new approach will impact on the three arenas of society environment and economics ushering in a new age of re integration

*Environmental Science , **Sustainable Work and the Environmental Crisis*** Chris Baldry, Jeff Hyman, 2021-07-20 Compared to 20 years ago the jobs many people do today are increasingly characterised by low pay and insecurity while countless others cope with workplace stress and ill health At the same time the consequences of our current model of economic activity are creating dangerous and critical changes in the planet s climate Until recently debates around these two issues have had little contact with each other This book demonstrates that there are definite and complex connections between degraded jobs and a degraded environment that neither the dominant economic model nor the rate at which we exploit the planet s resources are sustainable and that the limits for both may be reached sooner rather than later By bringing together insights from critical thinkers in a range of disciplines the book discusses the requirements and characteristics for work to be at the same time economically socially and environmentally sustainable and examines the potential for alternative routes to sustainable work in policies and actions that support both the natural environment and worker well being The book will be of interest to researchers academics and students in the fields of HRM labour studies employment relations sociology environmental studies and sustainability It is particularly relevant for those focusing on the link between labour and climate change It is also highly relevant to policymakers trade unions and NGOs looking at decent work and sustainability
