The Expanding Circle The Ethics And Sociobiology:

The Expanding Circle Peter Singer, 1982 The Expanding Circle Peter Singer, 2011-04-18 What is ethics Where do moral standards come from Are they based on emotions reason or some innate sense of right and wrong For many scientists the key lies entirely in biology especially in Darwinian theories of evolution and self preservation But if evolution is a struggle for survival why are we still capable of altruism In his classic study *The Expanding Circle* Peter Singer argues that altruism began as a genetically based drive to protect one's kin and community members but has developed into a consciously chosen ethic with an expanding circle of moral concern Drawing on philosophy and evolutionary psychology he demonstrates that human ethics cannot be explained by biology alone Rather it is our capacity for reasoning that makes moral progress possible In a new afterword Singer takes stock of his argument in light of recent research on the evolution of morality *The Expanding Circle* Peter Singer, 1983 **The Expanding Circle** Peter Singer, 2011 **Peter Singer Under Fire** Jeffrey A. Schaler, 2011-09-30 One of the leading ethical thinkers of the modern age Peter Singer has repeatedly been embroiled in controversy Protesters in Germany closed down his lectures mistakenly thinking he was advocating Nazi views on eugenics Conservative publisher Steve Forbes withdrew generous donations to Princeton after Singer was appointed professor of bioethics His belief that infanticide is sometimes morally justified has appalled people from all walks of life Peter Singer Under Fire gives a platform to his critics on many contentious issues Leaders of the disability rights group Not Dead Yet attack Singer's views on disability and euthanasia Economists criticize the effectiveness of his ideas for solving global poverty Philosophers expose problems in Singer's theory of utilitarianism and ethicists refute his position on abortion Singer's engaging Intellectual Autobiography explains how he came by his controversial views while detailed replies to each critic reveal further surprising aspects of his unique outlook **Refuting Peter Singer's Ethical Theory** Susan Krantz, 2002-01-30 Krantz provides a defense of traditional human centered ethics against Peter Singer's ethical theory Singer favors a Copernican revolution in ethics because he thinks our traditional ethics has collapsed under pressure from medical technology and from advances in the biological understanding of our fellow animals For nearly thirty years he has argued that the boundaries of the human lifespan and of the human species are so unclear that we must abandon our views that human beings have a special dignity and that the taking of innocent human life is always wrong Against this Krantz argues that in today's world human life has been cheapened and the values of the marketplace have begun to govern medical care and organ donation birth and death In fact this is just a foretaste of the world to come if Singer's ethical theory succeeds in replacing traditional human centered ethics What is required is not the abandonment of human dignity and of the sanctity of human life but rather a renewed understanding of how principles based on these ideas can be applied in the twenty first century Scholars students and general readers involved with ethical and contemporary philosophy issues will find this book interesting **Independent Offices and Department of Housing and Urban Development Appropriations**

for 1971 United States. Congress. House. Committee on Appropriations. Subcommittee on Independent Offices and Department of Housing and Urban Development,1990 **The Embers and the Stars** Erazim Kohák,1987-11-15 It is hard to put this profound book into a category Despite the author s criticisms of Thoreau it is more like Walden than any other book I have read The book makes great strides toward bringing the best insights from medieval philosophy and from contemporary environmental ethics together Anyone interested in both of these areas must read this book Daniel A Dombrowski The Thomist Those who share Koh k s concern to understand nature as other than a mere resource or matter in motion will find his temporally oriented interpretation of nature instructive It is here in particular that Koh k turns moments of experience to account philosophically turning what we habitually overlook or avoid into an opportunity and basis for self knowledge This is an impassioned attempt to see the vital order of nature and the moral order of our humanity as one Ethics

Handbook of Evolutionary Thinking in the Sciences Thomas Heams,Philippe Huneman,Guillaume Lecointre,Marc Silberstein,2014-11-23 The Darwinian theory of evolution is itself evolving and this book presents the details of the core of modern Darwinism and its latest developmental directions The authors present current scientific work addressing theoretical problems and challenges in four sections beginning with the concepts of evolution theory its processes of variation heredity selection adaptation and function and its patterns of character species descent and life The second part of this book scrutinizes Darwinism in the philosophy of science and its usefulness in understanding ecosystems whilst the third section deals with its application in disciplines beyond the biological sciences including evolutionary psychology and evolutionary economics Darwinian morality and phylolinguistics The final section addresses anti Darwinism the creationist view and issues around teaching evolution in secondary schools The reader learns how current experimental biology is opening important perspectives on the sources of variation and thus of the very power of natural selection This work examines numerous examples of the extension of the principle of natural selection and provides the opportunity to critically reflect on a rich theory on the methodological rigour that presides in its extensions and exportations and on the necessity to measure its advantages and also its limits Scholars interested in modern Darwinism and scientific research its concepts research programs and controversies will find this book an excellent read and those considering how Darwinism might evolve how it can apply to the human sciences and other disciplines beyond its origins will find it particularly valuable Originally produced in French Les Mondes Darwiniens the scope and usefulness of the book have led to the production of this English text to reach a wider audience This book is a milestone in the impressive penetration by Francophone scholars into the world of Darwinian science its historiography and philosophy over the last two decades Alex Rosenberg R Taylor Cole Professor of Philosophy Duke University Until now this useful and comprehensive handbook has only been available to francophones Thanks to this invaluable new translation this collection of insightful and original essays can reach the global audience it deserves Tim Lewens University of Cambridge **Philosophy After Darwin** Michael Ruse,2009 An anthology of essential

writings that cover some of the most influential ideas about the philosophical implications of Darwinism since the publication of *On the Origin of Species* *Why Gould Was Wrong* Nils K. Oeijord, 2003 Stephen Jay Gould 1941 2002 was a leading critic of human behavioral genetics human sociobiology evolutionary psychology and the modern evolutionary synthesis *Why Gould Was Wrong* explains why Gould's claims were horribly wrong *Evolution Science and Ethics in the Third Millennium* Robert Cliquet, Dragana Avramov, 2018-01-10 The book aims to revitalise the interdisciplinary debate about evolutionary ethics and substantiate the idea that evolution science can provide a rational and robust framework for understanding morality It also traces pathways for knowledge based choices to be made about directions for future long term biological evolution and cultural development in view of adaptation to the expected probable and possible future and the ecological sustainability of our planetary environment The authors discuss ethical challenges associated with the major biosocial sources of human variation individual variation inter personal variation inter group variation and inter generational variation This book approaches the long term challenges of the human species in a holistic way Researchers will find an extensive discussion of the key theoretical scientific aspects of the relationship between evolution and morality Policy makers will find information that can help them better understand from where we are coming and inspire them to make choices and take actions in a longer term perspective The general public will find food for thoughts **Equality and the Family** Don S. Browning, 2007 In *Equality and the Family* Don Browning pulls together essays he has published in the past in order to shed light on the path we should take in the future He contends that practical theology can be envisioned as a practical research program and he uses the very concrete example of the family to illustrate how this works Though it may sound unlikely that equality in the family can be based on Christian ideas Browning insists that it can and that it should His desire is to be pro family and pro marriage in ways that create justice and equality within the family Based on this goal he argues for the church's ideal model of the mother father partnership to be balanced with an understanding and acceptance of the pluralism of family forms as a part of modern life including church life A brief introduction of each essay is included to help the reader understand the original context of the piece **Darwin, God and the Meaning of Life** Steve Stewart-Williams, 2010-09-30 If you accept evolutionary theory can you also believe in God Are human beings superior to other animals or is this just a human prejudice Does Darwin have implications for heated issues like euthanasia and animal rights Does evolution tell us the purpose of life or does it imply that life has no ultimate purpose Does evolution tell us what is morally right and wrong or does it imply that ultimately nothing is right or wrong In this fascinating and intriguing book Steve Stewart Williams addresses these and other fundamental philosophical questions raised by evolutionary theory and the exciting new field of evolutionary psychology Drawing on biology psychology and philosophy he argues that Darwinian science supports a view of a godless universe devoid of ultimate purpose or moral structure but that we can still live a good life and a happy life within the confines of this view **Exploring Wild Law** Peter Burdon, 2011 From cover Wild law is a groundbreaking approach to

law that stresses human interconnectedness and dependence on nature. It critiques existing law for promoting environmental harm and seeks to establish a mutually enhancing human Earth relationship. For the first time this volume brings together voices from the leading proponents of wild law around the world. It introduces readers to the idea of wild law and considers its relationship to environmental law, the rights of nature, science, religion, property law, and international governance.

Gaia Connections Alan S. Miller, 2003. *Gaia Connections* addresses several arenas of concern as humankind faces an escalating ecological and moral crisis in this new millennium. Beginning with an overview of the history of philosophy and the importance of traditional thinking on modern day ethical reflection, the book then looks at the development of theories of justice, the problems of equity in global human relations, the inability of existing economic systems to resolve our human and environmental dilemmas, the unnatural connections now obtaining between genuine human need and the technological drift of science, the new genetics and reproductive technologies, and the nature of modern war. The study concludes with some historical perspectives on American environmental history and the urgent need for change in our ecoethical, social, and value systems. The principal focal areas of the original edition are continued: the actual state of the global environment today, the imperative for the development of sustainable economic and resource systems, the movement within much of science toward an almost universal biological determinism, and the need for a reaffirmation of an ethical value system which places the needs of people before the needs of property and profits. The revised edition not only updates these data and the concerns of the original book but also visits a number of new issues: the movement for environmental justice, the connections between global poverty and the now almost universal allegiance to a new world market and free trade system, the progress and the dilemmas of molecular biology and genetic engineering, and the growing disarray within the global systems of political economy.

Evolutionary Perspectives on Environmental Problems Dustin J. Penn, Iver Myrnes, The twenty first century presents an increasing number of environmental problems including toxic pollution, global warming, destruction of tropical forests, extinction of biological diversity, and depletion of natural resources. These environmental problems are generally due to human behavior, namely over consumption of resources and overpopulation. Designing effective policies to address these problems requires a deep understanding of human behavior as well as ecology. This in turn requires considerations of human nature and the evolutionary design of the human mind. Evolutionary research on human behavior has profound implications for the environmental sciences. The aim of this collection is to bring together a variety of chapters that show how and why. Part 1 Human Nature and Resource Conservation addresses environmental problems from different evolutionary perspectives. Part 2 The Ecological Noble Savage Hypothesis examines the notion that our environmental problems are due to Western culture and that our ancestors and people in indigenous societies lived in harmony with nature until the corrupting influences of Western culture. Part 3 The Tragedy of the Commons explores the conservation of common pool or open access natural resources such as fisheries, forests, grazing lands, freshwater, and clean air. Part 4 The Evolution of Discounting and

Conspicuous Consumption looks at the problem of explaining why people are so ecologically short sighted and why people in developed countries consume so many resources Part 5 Overpopulation and Fertility Declines addresses the evolution of human reproductive decisions Part 6 Biophilia aims to explain why people cherish nature as well as destroy it The goal of this volume is to introduce environmental thinkers to evolutionary perspectives on human behavior and the new interdisciplinary sciences of evolutionary psychology and behavioral ecology This reader aims to help bridge the artificial division between the biological and social sciences and provide a synthesis between evolutionary sciences of human behavior and environmental sciences Dustin J Penn is director Konrad Lorenz Institute Austrian Academy of Sciences Vienna Iver Myrsterud is biologist and researcher at the Department of Biology University of Oslo Norway Evolutionary Psychology Lance Workman, Will Reader, 2004-05-20 This textbook offers a comprehensive and accessible introduction to the complex but fascinating science of evolutionary psychology By focusing on the way mind and behavior have developed and adapted to evolutionary pressures the authors show the relevance of an evolutionary approach to all areas of psychology and have created a stand alone text that will also complement traditional courses Not only are standard topics such as natural selection and sexual selection covered but also areas where there has been much exciting new research such as the evolution of the emotions evolution and child development the evolution of language and Darwinian medicine The authors objective perspective will be much appreciated in this often controversial area as will their engaging style and the user friendly format Each chapter features a preview and list of key terms boxes highlighting case studies and the latest research a summary and a guide to further reading Hippocrates' Maze James Lindemann Nelson, 2003 To contain the Minotaur the ancient artificer Daedalus crafted a maze so intricate that it bewildered even its maker Contemporary medicine Hippocrates Maze is every bit as bewildering so much so that a new and distinct field bioethics has been created to help professional caregivers patients and families navigate their way through it In Nelson s typically inviting and graceful style the essays collected in Hippocrates Maze explore the labyrinth of contemporary health care and arrive at some unusual findings about death and decisionmaking justice and families cloning and kinship and organ donation and intimacy However the book s most distinctive conclusions concern bioethics itself the field is not best seen solely as a source of good advice to doctors but rather as a way of better understanding our humanity *Extraterrestrial Altruism* Douglas A. Vakoch, 2013-09-14 Extraterrestrial Altruism examines a basic assumption of the Search for Extraterrestrial Intelligence SETI that extraterrestrials will be transmitting messages to us for our benefit This question of whether extraterrestrials will be altruistic has become increasingly important in recent years as SETI scientists have begun contemplating transmissions from Earth to make contact Technological civilizations that transmit signals for the benefit of others but with no immediate gain for themselves certainly seem to be altruistic But does this make biological sense Should we expect altruism to evolve throughout the cosmos or is this only wishful thinking Is it dangerous to send messages to other worlds as Stephen Hawking has suggested or might humankind benefit from an

exchange with intelligence elsewhere in the galaxy Would extraterrestrial societies be based on different ethical principles or would we see commonalities with Earthly notions of morality Extraterrestrial Altruism explores these and related questions about the motivations of civilizations beyond Earth providing new insights that are critical for SETI Chapters are authored by leading scholars from diverse disciplines anthropology astronomy biology chemistry computer science cosmology engineering history of science law philosophy psychology public policy and sociology The book is carefully edited by Douglas Vakoch Director of Interstellar Message Composition at the SETI Institute and professor of clinical psychology at the California Institute of Integral Studies The Foreword is by Frank Drake This interdisciplinary book will benefit everybody trying to understand whether evolution and ethics are unique to Earth or whether they are built into the fabric of the universe
