The enzymes of biological membranes. 2. Biosynthesis of cell components Anthony N. Martonosi, 1976 **The Enzymes of Biological Membranes** Anthony Martonosi, 1985-02-01 *The Enzymes of Biological Membranes* Anthony Martonosi, 2011-10-05 In the first edition of *The Enzymes of Biological Membranes* published in four volumes in 1976 we collected the mass of widely scattered information on membrane linked enzymes and metabolic processes up to about 1975. This was a period of transition from the romantic phase of membrane biochemistry preoccupied with conceptual developments and the general properties of membranes to an era of mounting interest in the specific properties of membrane linked enzymes analyzed from the viewpoints of modern enzymology. The level of sophistication in various areas of membrane research varied widely: the structures of cytochrome c and cytochrome b were known to atomic detail while the majority of membrane linked enzymes had not even been isolated. In the intervening eight years our knowledge of membrane linked enzymes expanded beyond the wildest expectations. The purpose of the second edition of *The Enzymes of Biological Membranes* is to record these developments. The first volume describes the physical and chemical techniques used in the analysis of the structure and dynamics of biological membranes. In the second volume the enzymes and metabolic systems that participate in the biosynthesis of cell and membrane components are discussed. The third and fourth volumes review recent developments in active transport, oxidative phosphorylation and photosynthesis. Biomembranes Lionel A. Manson, 2012-12-06 Both science and religion are aspects of human endeavor that do not observe political constraints. It is therefore appropriate that contributions should come from many different countries for a series which attempts to chronicle developments in an interdisciplinary field such as membrane research. This volume is an excellent example of the diversity of thinking, background and approach needed by the working scientist for his research planning. From Canada comes a review by Silverman and Turner of the mechanisms by means of which the plasma membrane of the renal proximal tubule acts as a transport mediator. The two chapters that were written by American scientists are excellent examples of the comparative biochemical approach. Inoué feels he must apologize for being interested in the outer membrane of *E. coli* but it is obvious after a reading of his chapter that no apology is required. On the contrary we are grateful for his drawing our attention to this system and its unique properties. Holtzman, Gronowicz, Mercurio and Masur are also on a consciousness raising mission in

N. Martonosi, 1976-03 The romantic phase of membrane biochemistry characterized by conceptual developments and an essentially unlimited freedom of choice is gradually coming to a close. Attention is turning from the general qualitative description of membrane structure toward the specific properties of membrane linked enzymes and metabolic systems. The purpose of this series is to serve this development by collecting and evaluating the mass of interesting information that is already available widely scattered in the literature. The emphasis will be upon a comprehensive treatment of membrane linked enzymes from the viewpoint of modern enzymology. The general properties of membranes will be mentioned only to the extent that they are relevant to the discussion of the enzymes in question. The first of the four volumes will deal with the physical and chemical techniques X ray crystallography nuclear magnetic and electron spin resonance fluorescence spectroscopy immunology etc used in the characterization of membrane enzymes. Chapters are also included on artificial bilayer membranes chemical modification of membrane enzymes and on the nature of lipid protein interaction in membranes. In the next three volumes the enzyme systems participating in the biosynthesis of cell components active transport oxydative phosphorylation and photosynthesis will be analyzed. A brief discussion of hormone receptors is also included. Subsequent volumes may fill in the few but significant gaps in the coverage that for various reasons could not be avoided. **Subject**
