The Erasers:

The Erasers Alain Robbe-Grillet, 2015-06-23 The first book from the French avant gardist and author of *Jealousy* Robbe Grillet is the forerunner of a revolution in the novel Claude Mauriac cultural critic for *Le Figaro* Alain Robbe Grillet is internationally hailed as the chief spokesman for the nouveau roman and one of the great novelists of the twentieth century *The Erasers* his first novel reads like a detective story but is primarily concerned with weaving and then probing a complete mixture of fact and fantasy The narrative spans the twenty four hour period following a series of eight murders in eight days presumably the work of a terrorist group After the ninth murder the investigation is turned over to a police agent who may in fact be the assassin Both an engrossing mystery and a sinister deconstruction of reality *The Erasers* intrigues and unnerves with equal force as it pulls us along to its ominous conclusion On the surface and surface is the key word with this author *The Erasers* is a mystery story where a police agent named Wallas stalks an unknown assassin through a nameless puzzleboard Flemish town Nothing is certain The only thing the reader can be sure of is the laser precise detail in which all that isn't clear is described catalogued and analyzed *The Millions* A haunting mystifying evocation of a murder that will keep your attention riveted *The Dallas Morning News* Praise for Alain Robbe Grillet I can think of no other writer who can render the banal so fearfully fantastic *Books and Bookmen* I doubt that fiction as art can any longer be seriously discussed without Robbe Grillet *The New York Times*

Erasers Alain Robbe-Grillet, 2018-06-21 After a failed attempt on his life by an unknown terrorist cell Professor Daniel Dupont decides to fake his own death The government authorities believing that the attack is part of a series of political assassinations send Wallas a recently promoted special investigator to the provincial town where the crime took place As he wanders the confusing streets of the town he finds himself increasingly lost in a web of conspiracies doppelgaengers and memories Cleverly deconstructing the detective genre *The Erasers* Alain Robbe Grillet's first published novel shifts between various characters and time frames while maintaining the suspense of a conventional thriller The result is an engrossing examination of consciousness and reality which is also one the founding texts of the nouveau roman school

Readers and Mythic Signs Debra Modellmog, 1993 Some literary scholars view myth criticism as passe an approach to literature that enjoyed a heyday in the 1950s and 1960s before being replaced by approaches that are considered to be more theoretically sophisticated and satisfying such as feminism new historicism and deconstruction Modellmog argues that there are many good reasons not to cast out myth criticism from the community of critical approaches Most obvious among them is that myth has attracted many writers of this century from James Joyce to Thomas Pynchon Virginia Woolf to Flannery O'Connor Thomas Mann to Alain Robbe Grillet William Faulkner to Alberto Moravia and that to ignore myth is to dismiss an essential part of their work Modellmog suggests that by reconstruing the relationship between myth and literature we will find that mythic approaches are frequently not only necessary but also highly stimulating engaging readers in many varieties of questions quests and conclusions Publisher description [The Celestial](#)

Memory in the Ontopoiesis of Life Anna-Teresa Tymieniecka,2009-09-30 From Aristotle to the present memory has

been grasped as a trace or impression of lost reality bridging physiological experience and consciousness Philosophers have vainly sought the nature of this bridge The present day physiologizing naturalizing of consciousness is not resolving their congenital continuity in which the very existence and practice of life is rooted We have to change our approach Erwin Straus The Aristotelian congenital ties between memory and temporality acquire crucial significance in our primogenital onto-poiesis of life Tymieniecka It reveals memory to be the factor that carries this coalescence and the becoming of life itself This can be the fruit only of the generative springs of life first phenomenology philosophy the onto-poietic logos of life In this collection we explore memory in the constitution of reality remembering and interpretation consciousness action facts imagination history myths self realization metamorphosis

Relativism in the Arts Betty Jean Craige,2010-12-01 In a world where the acceptance of relativism has caused erosion in the tradition of Cartesian dualism representationalism in the arts has come under serious questioning The contributors to this book seek new standards for defining and evaluating works of art Relativism in the Arts brings together thinkers in the fields of music art criticism literary criticism philosophy and the history of consciousness to confront the problems of relativist aesthetics Their essays range from theoretical discussions of the definition of art in our times to close examinations of particular artworks or art forms The introduction by Betty Jean Craige presents reasons for the cultural self reflectivity that gives rise to the peculiarities of modern art **The American School Board Journal** ,1916 *What Determines Social Behavior? Investigating the Role of Emotions, Self-Centered Motives, and Social Norms* Corrado Corradi-Dell'Acqua, Leonie Koban, Susanne Leiberg, Patrik Vuilleumier, Ernst Fehr,2016-09-28 Human behavior and decision making is subject to social and motivational influences such as emotions norms and self other regarding preferences The identification of the neural and psychological mechanisms underlying these factors is a central issue in psychology behavioral economics and social neuroscience with important clinical social and even political implications However despite a continuously growing interest from the scientific community the processes underlying these factors as well as their ontogenetic and phylogenetic development have so far remained elusive In this Research Topic we collect articles that provide challenging insights and stimulate a fruitful controversy on the question of what determines social behavior Indeed

over the last decades research has shown that introducing a social context to otherwise abstract tasks has diverse effects on social behavior. On the one hand it may induce individuals to act irrationally for instance to refuse money but on the other hand it improves individuals reasoning in that formerly difficult abstract problems can be easily solved. These lines of research led to distinct although not necessarily mutually exclusive models for socially driven behavioral changes. For instance a popular theoretical framework interprets human behavior as a result of a conflict between cognition and emotion with the cognitive system promoting self interested choices and the emotional system triggered by the social context operating against them. Other theories favor social norms and deontic heuristics in biasing human reasoning and encouraging choices that are sometimes in conflict with one's interest. Few studies attempted to disentangle between these as well as other models. As a consequence although insightful results arise from specific domains tasks a comprehensive theoretical framework is still missing. Furthermore studies employing neuroimaging techniques have begun to shed some light on the neural substrates involved in social behavior implicating consistently although not exclusively portions of the limbic system the insular and the prefrontal cortex. In this context a challenge for present research lies not only in further mapping the brain structures implicated in social behavior or in describing in detail the functional interaction between these structures but in showing how the implicated networks relate to different theoretical models. This is Research Topic hosted by members of the Swiss National Center of Competence in Research Affective Sciences Emotions in Individual Behaviour and Social Processes. We collected contributions from the international community which extended the current knowledge about the psychological and neural structures underlying social behavior and decision making. In particular we encouraged submissions from investigators arising from different domains psychology behavioral economics affective sciences etc implementing different techniques behavior electrophysiology neuroimaging brain stimulations on different populations neurotypical adults children brain damaged or psychiatric patients etc. Animal studies are also included as the data reported are of high comparative value. Finally we also welcomed submissions of meta analytical articles mini reviews and perspective papers which offer provocative and insightful interpretations of the recent literature in the field.
