Holmes, 2015-06-26 Excerpt from The Evolution of Animal Intelligence The investigations of recent years have added so much to our knowledge of the activities of animals that any adequate account of the whole field of animal behavior would require several volumes The present work is confined to certain topics which bear upon the evolution of animal intelligence and our treatment of even this part of the subject has been of necessity fragmentary It has been our aim to give a fairly clear conception of the activities upon which intelligence is based to show how intelligence is related to these activities and to sketch the general course of the evolution of intelligence in the animal kingdom No effort has been made to deal with all the classes of animals in which intelligence is manifested and some groups which were not essential to the development of our theme have received little attention I wish to express my thanks to Prof L J Cole and Prof H B Torrey for their helpful criticisms of the manuscript of this book before it went to press To Prof L T Hobhouse Prof E L Thorndike and Dr L Witmer I am indebted for permission to reproduce the figures which are attributed to these writers in the text and I am also indebted to the Macmillan Company for kindly allowing me to reproduce figures 15 and 16 from their publications My greatest debt is to my wife for help and encouragement in many ways About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *The Evolution of Animal Intelligence* Samuel Jackson Holmes, 2023-07-18 A groundbreaking study of the cognitive abilities of animals with a focus on the evolutionary adaptations that have allowed certain species to develop complex problem solving skills and social behaviors This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant **The Evolution of Animal Intelligence** S.J. Animal Life and Intelligence Conwy Lloyd Morgan, 1891 *The Evolution of Intelligence* James H. Fetzer, 2005 James Fetzer explores the nature of consciousness and cognition in human beings and other animals. He addresses the inadequacies of the computational conception and expounds on an alternative theory based on the study of signs and symbols as elements of communicative behavior. Fetzer offers a new theory of intelligence by which machines can be intelligent without possessing minds

The Human Evolutionary Transition Magnus Enquist, Stefano Ghirlanda, Johan Lind, 2023-02-28 A major new theory of why human intelligence has not evolved in other species. The Human Evolutionary Transition offers a unified view of the evolution of intelligence presenting a bold and provocative new account of how animals and humans have followed two powerful yet very different evolutionary paths to intelligence. This incisive book shows how animals rely on robust associative mechanisms that are guided by genetic information which enable animals to sidestep complex problems in learning and decision making but ultimately limit what they can learn. Humans embody an evolutionary transition to a different kind of intelligence one that relies on behavioral and mental flexibility. The book argues that flexibility is useless to most animals because they lack sufficient opportunities to learn new behavioral and mental skills. Humans find these opportunities in lengthy childhoods and through culture. Blending the latest findings in fields ranging from psychology to evolutionary anthropology, The Human Evolutionary Transition draws on computational analyses of the problems organisms face, extensive overviews of empirical data on animal and human learning, and mathematical modeling and computer simulations of hypotheses about intelligence. This compelling book demonstrates that animal and human intelligence evolved from similar selection pressures while identifying bottlenecks in evolution that may explain why human-like intelligence is so rare

Animal Intelligence Edward Lee Thorndike, *Animal Intelligence* is a consolidated record of Edward L. Thorndike's theoretical and empirical contributions to the comparative psychology of learning. Thorndike's approach is systematic and comprehensive experimentation using a variety of animals and tasks all within a laboratory setting. When this book first appeared it set a compelling example and helped make the study of animal behavior very much an experimental laboratory science. This landmark study in the investigation of animal intelligence illustrates Thorndike's thinking on the evolution of the mind. It includes his formal statement of the influential law of effect which had a significant impact on other behaviorists. Hull's law of primary reinforcement was closely related to the law of effect and Skinner acknowledged that the process of operant conditioning was probably that described in the law of effect. The new introduction by Darryl Bruce is an in-depth study of Thorndike's legacy to comparative psychology as well as a thorough retrospective review of *Animal Intelligence*. He includes a biographical introduction of the behaviorist and then delves into his theories and work. Among the topics Bruce covers with respect to Thorndike's studies are the nature of animal intelligence, the laws of learning and connectionism, implications for comparative psychology, and relation to theories of other behaviorists. *Animal*

Intelligence is an intriguing analysis that will be of importance to psychologists and animal behaviorists Edward L Thorndike 1874-1949 had a distinguished career in psychology that spanned more than half a century Through most of his career Thorndike was a professor of psychology at Columbia University He authored more than 500 publications Darryl Bruce is professor of psychology at Saint Mary's University Halifax Nova Scotia He is the author of many articles and the co editor of Autobiographical Memory Theoretical and Applied Perspective and Eyewitness Memory Theoretical and Applied Perspectives
