**Conceptual Foundations for Multidisciplinary Thinking** Stephen Jay Kline, 1995-01-01 Our current intellectual system provides us with a far more complete and accurate understanding of nature and ourselves than was available in any previous society This gain in understanding has arisen from two sources the use of the scientific method and the breaking up

of our intellectual enterprise into increasingly narrower disciplines and research programs However we have failed to keep these narrow specialities connected to the intellectual enterprise as a whole The author demonstrates that this causes a number of difficulties We have no viewpoint from which we can understand the relationships between the disciplines and lack a forum for adjudicating situations where different disciplines give conflicting answers to the same problem We seriously underestimate the differences in methodology and in the nature of principles in the various branches of science This provocative and wide ranging book provides a detailed analysis and possible solutions for dealing with this problem The Therapeutic Revolution Morris J. Vogel, Charles E. Rosenberg, 2017-01-30 This book is not about one glorious triumph after another nor is it a series of complaints about doctors and hospitals Rather these essays examine American medicine within its context sensitive to the role of medical knowledge practitioners and institutions in the nineteenth and twentieth centuries The selections not only cover general considerations of the social and cultural context in which American medicine developed but also analyze the relationship between science and medicine the development of mental hospitals nursing and health insurance The Excitement and Fascination of Science George H. Bishop, 1965
