when AI has advanced so far that it matches human intelligence in every way Human intelligence whilst slower in some respects is still more flexible than AI But once AI has caught up it will take no time at all before going on to surpass humans by a huge distance That scary prospect is termed artificial superintelligence ASI Rupert Robson argues that we are now just two conceptual hurdles away from developing ASI The first of the two hurdles is to embed consciousness in AI thereby giving us the sentient robot This will enable ASI to see the world through our eyes The second of the two hurdles is about the developmental step needed in AI design so as to achieve human level flexibility in thought A new world is about to open up before us We need to understand it and prepare for it
