Adaptations in the Animal Kingdom Verne A. Simon,2010-03-11 Chapter 1 Temperature Regulation in Animals There are broadly speaking two kinds of animals with regard to body temperature exothermic cold blooded and endothermic warm blooded animals The exothermic animals such as reptiles do not supply body heat by metabolic conversion of food to heat Reptiles allow their surroundings to determine their body temperature They lie out in the sun to warm their body If they are too hot they seek the shade or even burrow into the ground At night they hide from the cold in burrows or squeeze into cracks between rocks or hide in leaf cover Reptiles avoid the extremes of temperature When reptiles become cool their movements slow down and chemical processes in their bodies such as digestion are inhibited Predators such as hawks and eagles find it easier to prey on lizards and snakes in cooler weather The distribution of reptiles is somewhat limited by their exothermic character They do not thrive in cold climates¹ What are the advantages and disadvantages in being exothermic When the lizard is in a cool environment and cannot find a warmer spot its body simply cools to the temperature of the surroundings It is not necessary for the exothermic lizard to generate heat to increase its body temperature This means that the lizard uses less energy and does not have to eat as much As the lizard cools its digestion breathing rate and heart rate slow saving energy A disadvantage occurs when the cool lizard is attacked by a predator If warm he could run fast and have a much better chance of 1 St Patrick did not chase the snakes out of Ireland Ireland was already completely free of snakes St Patrick was instrumental in converting pagans to Christianity Since the snake was a symbol used in pagan rituals St Patrick was influential in ridding Ireland of the ritual use of symbolic snakes 10 Verne A Simon evading capture A warm lizard being chased by a predator can move quite fast for a short distance but like other exotherms lacks endurance and soon tires When

the exotherm is running fast its effort is anaerobic that is is not using oxygen and lactic acid is building up in its body It soon tires and is unable to exert itself It must recover by taking in oxygen to rid the body of lactic acid Another disadvantage of exothermic life is that cold climates are not available as habitat If there is a sudden climate change an exothermic animal wouldn't be able to mount the sustained effort needed to migrate to a better environment The exothermic creature might simply perish About 180 million years ago mammals appeared Mammals are endothermic warm blooded and are able to maintain a nearly constant body temperature regardless of the temperature of their surroundings within wide limits Their bodies will not tolerate too high or too low a temperature If the surroundings are too hot or cold causing the body temperature to exceed allowed limits the animal will die Mammals have furry coats to help them tolerate low temperatures Sea dwelling mammals whales seals and walrus have thick layers of blubber for insulation Birds are endothermic and have feathers to protect them from the cold Many types of birds and mammals survive in cold climates Emperor penguins even live in the Antarctic in the coldest climate on earth Under normal circumstances mammals and birds manage to keep this very nearly constant body temperature regardless of the temperature of their surroundings Mammals are characterized by having body hair and suckling their young This latter behavior gives the class its name mammals must have mammary glands A second advantage is that endothermic animals are not limited to activity only in daylight hours In many local

The Sleeping Beauty Mercedes Lackey, 2016-12-12 MERCEDES LACKEY S magical A Tale of the Five Hundred Kingdoms series continues with a captivating new adventure Heavy is the head and the eyelids of the princess who wears the crown In Rosamund's realm happiness hinges on a few simple beliefs For every princess there's a prince The King has ultimate power Stepmothers should never be trusted And bad things come to those who break with Tradition But when Rosa is pursued by a murderous huntsman and then captured by dwarves her beliefs go up in smoke Determined to escape and save her kingdom from imminent invasion she agrees to become the subject of one of her stepmother's risky incantations thus falling into a deep deep sleep When awakened by a touchy feely stranger Rosa must choose between Tradition and her future between a host of eligible princes and a handsome fair haired outsider And learn the difference between being a princess and ruling as a Queen

Psychology Around Us Ronald Comer, Elizabeth Gould, 2010-01-19 This exciting new textbook for introductory psychology helps to open students' minds to the idea that psychology is all around us Authors RON COMER and LIZ GOULD encourage students to examine what they know about human behaviour and how they know it and open them up to an appreciation of psychology outside of the classroom Psychology Around Us helps students see the big picture by stressing the interconnected nature of psychological science Almost every chapter within this first edition helps open students' minds to comprehend the big picture with sections that highlight how the different fields of psychology are connected to each other and how they connect to everyday life This text highlights human development brain function abnormal psychology and the individual differences in each area as cut across themes to demonstrate these connections Also included are two page art spreads to demonstrate exactly What Happens In The Brain When we engage in everyday activities such as eat pizza study psychology or listen to music The art featured in these spreads have been created especially for Psychology Around Us by an award winning artist with input from faculty on how it will contribute to teaching and learning Features Cut Across Connections Almost every chapter helps students comprehend the big picture with sections that highlight how the different fields of psychology are connected to each other and how they connect to everyday life What Happens in the Brain When These two page art spreads demonstrate exactly what happens in the brain when we engage in everyday activities such as eating pizza studying psychology or listening to music Chapter Opening Vignettes Every chapter begins with a vignette that shows the power of psychology in understanding a whole range of human behaviour This theme is reinforced throughout the chapter celebrating the extraordinary processes that make the everyday possible Special topics on psychology around us Each chapter highlights interesting news stories

current controversies in psychology and relevant research findings that demonstrate psychology around us The Practically Speaking box emphasizes the practical application of everyday psychology Helpful study tools Key Terms Marginal Definitions Marginal Notes Chapter Summaries **Christian Liberty Nature Reader, Book Five** Washington

Hooker,2007-02 This supplemental reader teaches youngsters about the wonders of the human body Children learn about how and why God created the systems of sight hearing breathing touching and thinking Each concept is beautifully illustrated and each lesson contains helpful comprehension questions Grade 5 **The Sleep Instinct** Ray

Meddis,2017-09-07 Most of us believe that we sleep in order to rest our tired bodies and minds Originally published in 1977 this centuries old common sense view is challenged by Ray Meddis who describes and argues for a controversial new theory of the nature and function of sleep The theory seeks to replace the old view with the idea that sleep may no longer serve any important function in modern man Whereas the sleep instinct helps animals to survive by driving them to hide away for as long as possible each day this is no longer a valuable asset in civilised surroundings Nevertheless as the author explains we still feel driven by a primeval urge beyond conscious control to crawl away every evening to the security of our beds to wait out the dangerous hours of darkness which were such a threat to our ancestors Contrary to contemporary wisdom he also argues that dreaming is a primitive and particularly valueless kind of sleep a crude a dangerous heritage from our reptilian ancestors which is kept to a bare minimum in most adult warm blooded creatures Ray Meddis writes in a non technical style and succeeds admirably in making the science of sleep and intensive research studies on sleep accessible and even exciting for the general reader as well as for the scientist He shows that not everyone is bound by a felt need for sleep in fact some human beings discussed at length in the book thrive on less than two hours sleep a night without any ill effects The implications of the research described are little short of sensational in particular Dr Meddis believes that it is well within the bounds of possibility that future research will show us how changes can be brought about in normal people to free them from the bondage of their sleep instincts This new perspective also leads directly into a radical reappraisal of the nature of insomnia and new possibilities for treatment **Eyewitness Companions: Photography** Tom Ang,2005-10-03 This title
