Stormwater Infiltration:

Stormwater Infiltration Bruce K. Ferguson, 1994-09-21 Stormwater infiltration is the most complete approach to stormwater management Only infiltration can simultaneously solve problems of water quality flood control streambank erosion aquifer recharge and maintenance of downstream base flows and wetland hydroperiods Stormwater Infiltration is the first book to explain the principles of natural science on which infiltration is based how to apply infiltration to any region of the country and what kinds of results can be expected It brings into one publication the complete range of necessary information on soils vegetation infiltration hydrology design criteria site layout construction process for surface and subsurface basins porous paving materials feasibility maintenance and performance It draws more than half a century's actual experiences from all over the United States to place stormwater management in a context of environmental balance and quality for human life *Groundwater Contamination from Stormwater Infiltration* Robert E. Pitt, 1996-03-01

Groundwater Contamination from Stormwater Infiltration examines topics such as urban runoff constituents of concern treatment combined sewage characteristics relative contributions of urban runoff flow phase salts and dissolved minerals treatment before discharge outfall pretreatment and local pretreatment Potential Groundwater Contamination from Intentional and Nonintentional Stormwater Infiltration Robert Pitt, Shirley Clark, Keith Parmer, 1994-07 Reviews the groundwater contamination literature as it relates to stormwater Potential problem pollutants were identified based on their mobility through the unsaturated soil zone above groundwater their abundance in stormwater and their treatability before discharge Possible pollutants were then identified Includes recommendations for stormwater infiltration guidelines

Stormwater Infiltration in the Highway Environment Aaron Poresky, 2019 The infiltration approach to stormwater management involves the design construction and operation of engineered systems that infiltrate stormwater runoff into soils These systems referred to as infiltration best management practices BMPs are intended to reduce the volume of stormwater runoff and associated pollutants that discharge to stormwater systems and receive waters via surface runoff The TRB National Cooperative Highway Research Program's NCHRP Research Report 922 Stormwater Infiltration in the Highway Environment Guidance Manual supports evaluation selection siting design and construction of infiltration BMPs in the highway environment It is also intended to identify limitations on the use of infiltration and determine the need for alternative non infiltration based stormwater management approaches **Storm Water Management** Petr

Hlavínek, Martina Zelenáková, 2015-11-26 This book reviews the current state of the art in managing infrastructure urban regions industrial regions and inhabited areas with respect to flooding and water damage The author is a well known expert in storm water management and this book gives a broad overview of the different manageable components that play a role in storm water risks It includes chapters on planning infrastructure and regional development modifications in urban regions and localities with buildings and historical buildings covering different city types and residential areas housing and

commercial zones as well as housing development The author then goes on to review different hydrological conditions that make areas safer or more prone to storm water threats and capture and store storm water The last part of the books covers sealed infrastructure and their role in storm water hazards including roads public spaces roofs and others Improving the EPA Multi-Sector General Permit for Industrial Stormwater Discharges National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Improving the Next-Generation EPA Multi-Sector General Permit for Industrial Stormwater Discharges, 2019-10-11 Industrial stormwater is derived from precipitation and or runoff that comes in contact with industrial manufacturing processing storage or material overburden and then runs offsite and enters drainage systems or receiving waters In 1987 Congress significantly expanded the National Pollutant Discharge Elimination System NPDES program through amendments to the Clean Water Act to include industrial stormwater runoff conveyed through outfalls directly to receiving waters or indirectly through municipal separate storm sewer systems The added regulation of stormwater in the NPDES program has been challenging Stormwater is produced throughout a developed landscape and its production and delivery are episodic In 2009 the National Research Council released a comprehensive report on the Environmental Protection Agency's Stormwater Program that covered all sectors of the program This study builds on that report with a focus on industrial stormwater monitoring and management

Maryland Standards and Specifications for Stormwater Management Infiltration Practices Maryland. Stormwater Management Division, 1984 *Using Graywater and Stormwater to Enhance Local Water Supplies* National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Water Science and Technology Board, Committee on the Beneficial Use of Graywater and Stormwater: An Assessment of Risks, Costs, and Benefits, 2016-06-30 Chronic and episodic water shortages are becoming common in many regions of the United States and population growth in water scarce regions further compounds the challenges Increasingly alternative water sources such as graywater untreated wastewater that does not include water from the toilet but generally includes water from bathroom sinks showers bathtubs clothes washers and laundry sinks and stormwater water from rainfall or snow that can be measured downstream in a pipe culvert or stream shortly after the precipitation event are being viewed as resources to supplement scarce water supplies rather than as waste to be discharged as rapidly as possible Graywater and stormwater can serve a range of non potable uses including irrigation toilet flushing washing and cooling although treatment may be needed Stormwater may also be used to recharge groundwater which may ultimately be tapped for potable use In addition to providing additional sources of local water supply harvesting stormwater has many potential benefits including energy savings pollution prevention and reducing the impacts of urban development on urban streams Similarly the reuse of graywater can enhance water supply reliability and extend the capacity of existing wastewater systems in growing cities Despite the benefits of using local alternative water sources to address water demands many questions remain that have limited the broader application of graywater and stormwater

capture and use In particular limited information is available on the costs benefits and risks of these projects and beyond the simplest applications many state and local public health agencies have not developed regulatory frameworks for full use of these local water resources To address these issues Using Graywater and Stormwater to Enhance Local Water Supplies analyzes the risks costs and benefits on various uses of graywater and stormwater This report examines technical economic regulatory and social issues associated with graywater and stormwater capture for a range of uses including non potable urban uses irrigation and groundwater recharge Using Graywater and Stormwater to Enhance Local Water Supplies considers the quality and suitability of water for reuse treatment and storage technologies and human health and environmental risks of water reuse The findings and recommendations of this report will be valuable for water managers citizens of states under a current drought and local and state health and environmental agencies
