We believe that this book will serve as a useful source of knowledge for both academia and industry for all those faculty members, research scientists, scholars, Ph.D. students and practitioners who are interested in fundamental and applied facets of intelligent interactive multimedia. Information and Communication Technology for Intelligent Systems (ICTIS 2017) - Volume 1 Suresh Chandra Satapathy, Amit Joshi, 2017-08-07 This volume includes 74 papers presented at ICTIS 2017, Second International Conference on Information and Communication Technology for Intelligent Systems. The conference was held on 25th and 26th March 2017 in Ahmedabad, India, and organized jointly by the Associated Chambers of Commerce and Industry of India (ASSOCHAM) Gujarat Chapter, the G. R. Foundation, the Association of Computer Machinery Ahmedabad Chapter, and supported by the Computer Society of India Division IV Communication and Division V Education and Research. The papers featured mainly focus on information and communications technology (ICT) for computation, algorithms and data analytics. The fundamentals of various data analytics and algorithms discussed are useful to researchers in the field. *Service Computing: Concept, Method and Technology* Zhaohui Wu, 2014-12-06 Service computing is a cross-disciplinary field that covers science and technology and represents a promising direction for distributed computing and software development methodologies. It aims to bridge the gap between business services and IT services by supporting the whole lifecycle of services innovation.

Over the last ten years applications in industry and academic research have produced considerable progress and success. Service Computing: Concept, Method and Technology presents the concept of service computing and a proposed reference architecture for service computing research before proceeding to introduce two underlying technologies: Web services and service-oriented architecture. It also presents the authors' latest research findings on hot topics such as service discovery, recommendation, composition, verification, service trust, dynamic configuration, and big data service. Some new models and methods are proposed, including three service discovery methods based on semantics and skyline technologies, two service recommendation methods using graph mining and QoS prediction, two service composition methods with graph planning, and one service verification method using π -calculus and so on. Moreover, this book introduces JTang, an underlying platform supporting service computing, which is a product of the authors' last ten years of research and development. Systematically reviews all the research on service computing. Introduces state-of-the-art research works on service computing and provides a road map for future directions. Bridges the gap between service computing theory and practice. Provides guidance for both industry and academia. *Sale of Naval Petroleum Reserve No.1(Elk Hills), Kern County, 1997* **Skylines and Other**

Dominance-Based Queries Apostolos N. Papadopoulos, Eleftherios Tiakas, Theodoros Tzouramanis, Nikolaos Georgiadis, Yannis Manolopoulos, 2022-06-01 This book is a gentle introduction to dominance-based query processing techniques and their applications. The book aims to present fundamental as well as some advanced issues in the area in a precise but easy-to-follow manner. Dominance is an intuitive concept that can be used in many different ways in diverse application domains. The concept of dominance is based on the values of the attributes of each object. An object dominates another object if it is better than it. This goodness criterion may differ from one user to another. However, all decisions boil down to the minimization or maximization of attribute values. In this book, we will explore algorithms and applications related to dominance-based query processing. The concept of dominance has a long history in finance and multi-criteria optimization. However, the introduction of the concept to the database community in 2001 inspired many researchers to contribute to the area. Therefore, many algorithmic techniques have been proposed for the efficient processing of dominance-based queries such as skyline queries, dominant queries, and top dominating queries, just to name a few. *Climatological Data*, **Database Systems for Advanced Applications** Selçuk Candan, Lei Chen, Torben Bach Pedersen, Lijun Chang, Wen Hua, 2017-03-20 This two-volume set LNCS 10177 and 10178 constitutes the refereed proceedings of the 22nd International Conference on Database Systems for Advanced Applications DASFAA 2017 held in Suzhou, China, in March 2017. The papers are organized around the following topics: semantic web and knowledge management, indexing and distributed systems, network embedding, trajectory and time series data processing, data mining, query processing and optimization, text mining, recommendation, security, privacy, sensor and cloud, social network analytics, map matching, and spatial keywords query.
