Dreaming and the Development of Consciousness David Foulkes, 2009-07-01 David Foulkes is one of the international leaders in the empirical study of children's dreaming and a pioneer of sleep laboratory research with children In this book which distills a lifetime of study Foulkes shows that dreaming as we normally understand it active stories in which the dreamer is an actor appears relatively late in childhood This true dreaming begins between the ages of 7 and 9 He argues that this late development of dreaming suggests an equally late development of waking reflective self awareness Foulkes offers a spirited defense of the independence of the psychological realm and the legitimacy of studying it without either psychoanalytic over interpretation or neurophysiological reductionism **Handbook of Behavioral State Control** Ralph

more than seventy five commentaries on those papers by nearly all of the other leading authorities in the field Topics include mechanisms of dreaming and REM sleep memory consolidation in REM sleep and an evolutionary hypothesis of the function of dreaming The papers and commentaries together with the authors rejoinders represent a huge leap forward in our understanding of the sleeping and dreaming brain The book s multidisciplinary perspective will appeal to students and researchers in neuroscience cognitive science and psychology
