Stock Enhancement and Sea Ranching Kenneth M. Leber, Shuichi Kitada, H. L. Blankenship, Terje Svasand, 2008-04-15
The collapse of many of the World's fisheries continues to be of major concern and the enhancement of fish stocks through techniques such as ranching is of huge importance and interest across the globe. This important book, which contains fully peer-reviewed and carefully edited papers from the 2nd International Symposium in Stock Enhancement and Sea Ranching, is broadly divided into sections covering the following areas: The present situation of stock enhancement; Seed quality and techniques for effective stocking; Health management of hatchery stocks; Methods for evaluating stocking effectiveness; Population management in stock enhancement and sea ranching; Management of stocked populations; Ecological interactions with wild stocks; Genetic management of hatchery and wild stocks; Socio-economics of stock enhancement; Case studies. Stock Enhancement and Sea Ranching has been written and edited by some of the world's foremost authorities in fisheries science and related areas and is essential reading for all fisheries scientists throughout the World. Fish biologists, marine and aquatic scientists, environmental biologists, ecologists, conservationists, aquaculture personnel and oceanographers will all find much of use and interest within this book. All libraries within universities and research establishments where these subjects are studied and taught should have copies of this book on their shelves.

Restocking and Stock Enhancement of Marine Invertebrate Fisheries Johann D. Bell, 2005-12-07
Annotation: Many of the world's fisheries are in trouble; they no longer yield the catches and potential profits they once did. The habitats that support fisheries have been damaged by pollution and other irresponsible use of coastal land. Destructive fishing methods like trawling and blast fishing have also changed fish habitats, resulting in support of fewer fish. The authors draw on more than 1000 scientific papers covering 11 groups/species of marine invertebrates. From this large literature, they distill 20 lessons for assessing and guiding the use of restocking and stock enhancement in the management of invertebrate fisheries. Written by 7 expert authors. Covers 11 groups/species of marine invertebrates. Reviews over 1000 scientific papers. Identifies 20 lessons that can be learned from past restocking and stock enhancement initiatives. Proposes a new approach to assess the potential value of hatchery releases to complement other forms of management. Assesses progress of discipline against the blueprint for a responsible approach.
