Social Origins Of Modern Science:

The Social Origins of Modern Science P. Zilsel, 2013-03-07 Edgar Zilsel 1891 1944 lived through the best of times and worst of times through the renewal of scientific optimism and humane politics and through the massive social collapse into idolatrous barbarism With it all and with his personal and family crises in Vienna and later in America Zilsel was I believe a heroic indeed a model scholar of the first half of the 20 century He was widely admired as a teacher at high schools in workers education in research tutoring and seminars He was an original investigator on matters of the methodology of science and of the history of the sciences He was a social and political analyst as a critical Marxist of the turmoil of Vienna in the 20s Above all he achieved so much as a sociological historian who undertook research on two central facts of the early modern world recognition of the creative individual and the ideal of genius and the conditions and realities of the coming of science to European civilization [The Social Origins of Modern Science](#) D. Zilsel P. Raven, W. Krohn, Robert S.

Cohen, 2014-01-15 **The Scientific Revolution and the Origins of Modern Science** John Henry, 2008-06-03 This is a concise but wide ranging account of all aspects of the Scientific Revolution from astronomy to zoology The third edition has been thoroughly updated and some sections revised and extended to take into account the latest scholarship and research and new developments in historiography *A People's History of Science* Clifford D Conner, 2009-04-24 We all know the history of science that we learned from grade school textbooks How Galileo used his telescope to show that the earth was not the center of the universe how Newton divined gravity from the falling apple how Einstein unlocked the mysteries of time and space with a simple equation This history is made up of long periods of ignorance and confusion punctuated once in a while by a brilliant thinker who puts it all together These few tower over the ordinary mass of people and in the traditional account it is to them that we owe science in its entirety This belief is wrong *A People's History of Science* shows how ordinary people participate in creating science and have done so throughout history It documents how the development of science has affected ordinary people and how ordinary people perceived that development It would be wrong to claim that the formulation of quantum theory or the structure of DNA can be credited directly to artisans or peasants but if modern science is likened to a skyscraper then those twentieth century triumphs are the sophisticated filigrees at its pinnacle that are supported by the massive foundation created by the rest of us **THE TRUTH OF THE ORIGIN OF THE UNIVERSE**

Sabrie Soloman, 2024-06-12 *God's Signature in DNA The Rapture The Great Tribulation Armageddon War World War III* The concept of God's signature in DNA is a fascinating topic that explores the intricate design and complexity of the human genome Many creationists and religious believers see the complexity and precision of DNA as evidence of an intelligent designer or creator pointing to the existence of a higher power The idea that DNA contains a signature of God's handiwork is a theme often discussed in religious and philosophical circles highlighting the wonder and mystery of life itself Moving on to the topics of the Rapture the Great Tribulation and the Armageddon War these concepts are deeply embedded in Christian

eschatology or the study of end times The Rapture is believed to be the biblical event where believers are taken up to heaven to be with God before a period of tribulation and judgment on earth The Great Tribulation is a period of intense suffering and turmoil that is prophesied to occur before the final battle of Armageddon believed by the author to be World War III These apocalyptic beliefs have captured the imagination of many believers and have inspired countless books movies and religious teachings While interpretations of these events may vary among different Christian denominations the underlying message of hope redemption and faith in the face of adversity remains a central theme

The Origins of the Idea of Scientific Progress Daniel Špelda, 2024-06-21 This volume offers a new interpretation of the genesis of the idea of scientific progress in early modern science and philosophy The interpretation argues that the idea of scientific progress was not a historical category but an epistemological one The main thesis of the book posits that the idea of scientific progress was a methodological means of dealing with the contingency of nature To illustrate the novelty of the idea the individual chapters compare several features of Renaissance natural philosophy with a new regime of knowledge that included time as an inevitable factor of empirical research The temporal regime of knowledge is illustrated by the work of Bernard de Fontenelle and his colleagues at the Académie des sciences in Paris at the end of the 17th century The new interpretation remedies a gap in recent scholarship where the idea of scientific progress has been overlooked even though the early modern natural philosophers themselves used it to describe the nature of their research The book places both well known texts and less studied documents in a new light thus contributing to the lively and rich debate on the origins and nature of early modern science and philosophy It is of interest to scholars studying the history of early modern philosophy and science

Edgar Zilsel: Philosopher, Historian, Sociologist Donata Romizi, Monika Wulz, Elisabeth Nemeth, 2022-08-24 This book provides a new all round perspective on the life and work of Edgar Zilsel 1891-1944 as a philosopher historian and sociologist He was close to the Vienna Circle and has been hitherto almost exclusively referred to in terms of the so called Zilsel thesis on the origins of modern science Much beyond this thesis Zilsel's brilliant work provides original insights on a broad number of topics ranging from the philosophy of probability and statistics to the concept of genius from the issues of scientific laws and theories to the sociological background of science and philosophy and to the political analysis of the problems of his time Praised by Herbert Feigl as an outstanding brilliant mind Zilsel being as a Social Democrat of Jewish origins mostly led a life of hardship marked by emigration and coming to a sudden and tragic end by suicide in 1944 The impossibility of an academic career has hindered the reception of Zilsel's scientific work for a long time This volume is a contribution to its late reception providing new insights especially into his work during his years in Vienna moreover it shows the heuristic value of Zilsel's ideas for future scholarly research in philosophy history and sociology

Vienna Circle the Viennese roots and influences will be addressed in addition There is no doubt that contemporary philosophy of science originated mainly in Europe beginning in the 19th century and has influenced decisively the subsequent development of globalized philosophy of science esp in North America Recent research in this field documents some specific characteristics of philosophy of science covering the natural social and also cultural sciences in the European context up to the destruction and forced migration caused by Fascism and National Socialism This European perspective with the integration of history and philosophy of science and the current situation in the philosophy of science after the transatlantic interaction and transformation and the return after World War II raises the question of contemporary European characteristics in the philosophy of science The role and function of the renowned Vienna Circle of Logical Empiricism and its impact and influence on contemporary philosophy of science is on the agenda too Accordingly the general topic is dealt with in two parallel sessions representing systematic formal as well as genetic historical perspectives on philosophy of science in a European context up to the present

Shadows of the Enlightenment George E. McCarthy, 2025-08-05 *Shadows of the Enlightenment* sheds light on the deeply political agenda underlying Western science from the so called Age of Reason to the present George McCarthy uncovers the economic social and historical origins of modern science and illuminates the a priori and innate features which furnish the justifications for the technical domination and control of nature and humanity The natural sciences were born of a market economy commercial trade and industrial production and were furthermore reflective of the values and institutions of modern capitalism and its class system in the seventeenth century As such one of the central roles of Western science has been to legitimate its theoretical imperative to dominate nature and to reorganize human labor for profit property and power Breaking with the medieval scholastic tradition modern science viewed nature as a reified mechanism which could be mathematically measured empirically predicted causally explained and managed Nature itself was recast as a dead machine stripped of any inherent meaning or purpose Ultimately when applied to the production process the field of natural science led to scientific management and economic exploitation and when applied in the academy particularly to the social sciences the field of natural science led to the eclipse of reason and the twilight of social theory Building upon the radical analysis of Marx and Engels *Shadows of the Enlightenment* articulates a new liberatory postmodern science and technology grounded in

Marx's theory of social justice integrating ancient and modern traditions from classical Greece to the French Revolution from the Paris Commune to the Iroquois Confederacy In the process McCarthy invites us to move beyond the falsely mechanistic sense of reality and to break free from the sense of alienation that binds us all in order to make space for dreaming up a substantively democratic society **Handbook for the Historiography of Science** Mauro L. Condé, Marlon

Salomon, 2023-09-30 This book aims to perform a critical and broad assessment of the historiography of science produced from the late nineteenth century to the early twenty first century It presents its main authors concepts ideas conceptions and schools It also analyzes the historical circumstances of the rise of the discipline history of science and the relations of the historiography of science with related areas These chapters do not understand the historiography of science as a mere description or record of the history of science Instead they understand the historiography of science from the epistemological criteria and choices that guided the writing of the history of science in its different contexts In other words more than describing the record of the various possibilities of historiographical approaches to science the chapters carry out an epistemological reflection to assess the bases possibilities scope and limits of different historiographical conceptions authors and traditions that have established the writing of the history of science This book can be conceived as a reference work not only for professional historians and philosophers but also for academics from different backgrounds who are initiating themselves in the universe of history and philosophy of science be they scientists from different fields or young researchers from different backgrounds who want to start studying the history and philosophy of science *Locating Medical History* Frank Huisman, John Harley Warner, 2006-10-31 With diverse constitutions a multiplicity of approaches styles and aims is both expected and desired This volume locates medical history within itself and within larger historiographic trends providing a springboard for discussions about what the history of medicine should be and what aims it should serve Jacket
