Social Security Reforms, Retirement and Sectoral Decisions Bruno Delalibera, Pedro Cavalcanti Ferreira, Rafael Machado Parente, 2025-01-31 In many countries the regulations governing pension systems hiring procedures and job contracts differ between the public and private sectors Public sector employees tend to have longer tenures and higher wages compared to workers in the private sector As such social security reforms can affect both retirement decisions and sectoral choices We study the effects of social security reforms on retirement and sectoral behavior in an economy with multiple pension systems We develop a general equilibrium life cycle model with heterogeneous agents three sectors private formal private informal and public and endogenous retirement We quantitatively assess the long run effects of reforms being discussed and implemented around the world Among them we study the unification of pension systems and increasing the minimum retirement age We calibrate our model to Brazil where several of the retirement conditions resemble those of other countries We find that these reforms lower the likelihood of individuals to apply to a public job and increase the profile of savings over the life cycle In the long run these reforms lead to higher output and capital reduced informality and average welfare gains They also drastically reduce the social security deficit
