Bilingualism: introduction

Bilingualism - consider the means of acquisition - mother tongue, second language, foreign language - each circumstance affects the degree of attainment and overall proficiency.

Mother tongue - would be the language acquired from parents at home and would probably be the first one in terms of order of acquisition. (First language)

Second language - would be the language learned in the place where it is used by most speakers as a means of communication. (But which is not the native language of the learner).

Foreign language - is learned when the target language is not the language used by most speakers.

The domain influences language choice in bilingual speakers because the acquisition was domain dependent or one language is preferred in some contexts and subjected to the effects of 3 main factors:

- Location
- Role relationship among the interlocutors
- Topics involved in conversation

Bilingualism: definition and dimensions

Bilingualism - a person or group of people who can understand both languages although only in one area.

The study of bilingualism can give prominence to the social or individual side of the phenomenon:

- **Social bilingualism** - studies the social dimension of bilingual and multilingual societies. It does not mean that all speakers have a command over both languages, just implies at least some members of the speech communities are capable of using the other language.
- **Individual bilingualism** - one single person has some knowledge of two or more languages.

A large amount of research on individual bilingualism has tried to distinguish different sorts of bilingualism.

- **Coordinate bilingualism** - assumes that languages are learned in different conditions and separate contexts.
- **Compound bilingualism** - arises when acquisition takes place in a situation in which both languages are learned in the same context.
- **Sub-coordinate bilingualism** - from the learning of one language first and the learning of the other later on.

Cognitive Perspectives on Bilingualism

Monika Reif,Justyna A. Robinson,2016-04-25 Only 15 years ago bilingualism was somewhat outside the main debates in cognitive linguistics Cognitive linguistics had to a large extent taken for granted the fact that language is embodied in our experience However not much attention was given to questions of whether any changes to our language repertoire alter the way we perceive the world around us A growing body of recent research suggests that one cannot understand the cognitive foundations of language without looking at bi and multilingual speakers In this vein the present book aims to contribute to the existing debate of the relationship between language culture and cognition by assessing differences and similarities between monolingual and bilingual language acquisition and use In particular it investigates the effect of conceptual semantic and pragmatic properties of constructions on code choice and code switching as well as the impact of bilingual and bicultural education on speakers cognitive development This collective volume systematises reviews and promotes a range of theoretical perspectives and research techniques that currently inform work across the disciplines of bilingualism and code
