Measurements in the Social Sciences Hubert M. Blalock, 1974 Among the frustrations constantly confronting the social scientist are those associated with the general process of measurement The importance of good measurement has long been recognized in principle but it has often been neglected in practice in many of the social sciences Now that the methodological tools of multivariate analysis simultaneous equation estimation and causal modeling are diffused more widely into the social sciences and now that the very serious implications of random and non random measurement errors are being systematically investigated it is all the more important that social scientists give top priority to the quality of their data and the clarity of their theoretical conceptualizations as well as to methods for analyzing fallible data This book deals with selected problems of measurement and is written for graduate students and professional social scientists particularly in the technically less developed fields of sociology political science and anthropology The book is organized so that in general one proceeds from problems of data

collection to those of data analysis It is not intended to be a complete work covering all types of measurement problems that have arisen in the social sciences Instead it represents a series of studies of topics that are deemed to be crucial for the advancement of social science research but which have not received sufficient attention in most of the social sciences The basic purpose is to stimulate further methodological research on measurement and to study the ways in which knowledge that has been accumulated in some fields may be generalized so that it may be applied to others The book is divided into three major parts Part I is concerned with applying scaling approaches developed in psychometrics to problems that arise in other social sciences The focus is on finding better ways to ask questions of respondents so as to raise the level of measurement above that of simple ordinal scales Part II focuses on multiple indicator theory and strategies as applied to relatively complex models and to change data In this section the emphasis shifts to how one analyzes fallible data through the construction of explicit measurement error models Part III deals with the statistical analysis of ordinal data including the interpretation and empirical behaviors of various ordinal measures of association The final chapter written by the editor discusses how ordered metric assumptions may be used to make more powerful predictions than those characterizing much of contemporary social science

H M Blalock Jr 1926 1991 was Professor Department of Sociology the University of Washington Seattle He was recipient of the 1973 ASA Samuel Stouffer Prize and was a Fellow of the American Statistical Association and the American Academy of Arts and Sciences and is a member of the National Academy of Sciences He was the 70th president of the American Sociological Association

Sociology and Its Publics Terence C. Halliday, Morris Janowitz, 1992-10-15 Sociology faces troubling developments as it enters its second century in the United States A loss of theoretical coherence and a sense of disciplinary fragmentation a decline in the quality of its recruits the cooptation of its clients a muted public voice and sinking prestige in governmental circles these are only a few of the trends signalling a need for renewed debate about how sociology is organized In this volume some of the most authoritative voices in the field confront these conditions offering a variety of perspectives as they challenge sociologists to self examination The Problem of Solidarity Patrick Doreian, Thomas J. Fararo, 2012-10-12

Presently the world is undergoing tremendous social cultural and economic transformation For sociologists the challenge is

arriving at a sound mapping of this tumultuous world stage In this book the contributing authors consider solidarity as a cognitive problem of basic science They examine how solidarity is produced and reproduced how it is related to social processes and how such processes can be formalized and create conditions for productively studying their properties Mathematical models and representations are presented by the authors as a coherent set of tools for understanding many social phenomena
