A Global Synthesis of the Ordovician System: Part 1 D.A.T. Harper, B. Lefebvre, I. G. Percival, T. Servais, 2023-06-07 The Ordovician was one of the longest of the geological periods characterized by major magmatic and tectonic activity and immense biodiversification swings in climate and sea levels and the first Phanerozoic mass extinction A Global Synthesis of the Ordovician System is presented in two volumes in The Geological Society Special Publications This first volume SP532 charts the history of the Ordovician System and explores significant advances in our understanding of its biostratigraphy including more precise calibration of its timescale with tephra chronology and regional alignments using astrochronology and cyclostratigraphy Changes in the world's oceans their shifting currents and sea levels the biogeography of their biotas and the ambient climate are described and discussed against a background of changing palaeogeography This first volume also includes syntheses of the Ordovician geology for most European countries including historical key areas such as Great Britain Baltoscandia and Bohemia The second volume SP533 provides synthetic aspects of the Ordovician geology of most other parts of the world

Evolutionary Paleobiology James W. Valentine, 1996-12-15 Representing the state of the art in evolutionary paleobiology this book provides a much needed overview of this rapidly changing field An influx of ideas and techniques both from other areas of biology and from within paleobiology itself have resulted in numerous recent advances including increased recognition of the relationships between ecological and evolutionary theory renewed vigor in the study of ecological communities over geologic timescales increased understanding of biogeographical patterns and new mathematical approaches to studying the form and structure of plants and animals Contributors to this volume a veritable who's who of eminent researchers present the results of original research and new theoretical developments and provide directions for future studies Individually wide ranging these papers all share a debt to the work of James W Valentine one of the founders of modern evolutionary paleobiology This volume's unified approach to the study of life on earth will be a major contribution to paleobiology evolution and ecology

Early Palaeozoic Biogeography and Palaeogeography D.A.T. Harper, T. Servais, 2014-01-27 The Early Palaeozoic was a critical interval in the evolution of marine life on our planet Through a window of some 120 million years the Cambrian Explosion Great Ordovician Biodiversification Event End Ordovician Extinction and the subsequent Silurian Recovery established a steep trajectory of increasing marine biodiversity that started in the Late Proterozoic and continued into the Devonian Biogeography is a key property of virtually all organisms their distributional ranges mapped out on a mosaic of changing palaeogeography have played important roles in modulating the diversity and evolution of marine life This Memoir first introduces the content some of the concepts involved in describing and interpreting palaeobiogeography and the changing Early Palaeozoic geography is illustrated through a series of time slices The subsequent 26 chapters compiled by some 130 authors from over 20 countries describe and analyse distributional and in many cases diversity data for all the major biotic groups plotted on current palaeogeographic maps Nearly a quarter of a

century after the publication of the Green Book Geological Society London Memoir¹² edited by McKerrow and Scotese improved stratigraphic and taxonomic data together with more accurate digitized palaeogeographic maps have confirmed the central role of palaeobiogeography in understanding the evolution of Early Palaeozoic ecosystems and their biotas

GEOPHYSICS

Terrestrial Ecosystems Through Time Anna K. Behrensmeyer, 1992-08-15 Breathtaking in scope this is the first survey of the entire ecological history of life on land from the earliest traces of terrestrial organisms over 400 million years ago to the beginning of human agriculture By providing myriad insights into the unique ecological information contained in the fossil record it establishes a new and ambitious basis for the study of evolutionary paleoecology of land ecosystems A joint undertaking of the Evolution of Terrestrial Ecosystems Consortium at the National Museum of Natural History Smithsonian Institution and twenty six additional researchers this book begins with four chapters that lay out the theoretical background and methodology of the science of evolutionary paleoecology Included are a comprehensive review of the taphonomy and paleoenvironmental settings of fossil deposits as well as guidelines for developing ecological characterizations of extinct organisms and the communities in which they lived The remaining three chapters treat the history of terrestrial ecosystems through geological time emphasizing how ecological interactions have changed the rate and tempo of ecosystem change the role of exogenous forcing factors in generating ecological change and the effect of ecological

factors on the evolution of biological diversity The six principal authors of this volume are all associated with the Evolution of Terrestrial Ecosystems program at the National Museum of Natural History Smithsonian Institution
