Specialty Fiber Optic Systems For Mobile:

Specialty Fiber Optic Systems for Mobile Platforms and Plastic Optical Fibers Luis Figueroa, 1993 **Specialty Fiber Optic Systems for Mobile Platforms** Norris Lewis, Emery L. Moore, 1991 **Specialty Fiber Optic Systems for Mobile Platforms** Norris Lewis, Emery L. Moore, Society of Photo-Optical Instrumentation Engineers, 1991 **Electromechanical Sensors and Actuators** Ilene J. Busch-Vishniac, 2012-12-06 Mechanical engineering an engineering discipline borne of the needs of the industrial revolution is once again asked to do its substantial share in the call for industrial renewal The general call is urgent as we face profound issues of productivity and competitiveness that require engineering solutions among others The Mechanical Engineering Series features graduate texts and research monographs intended to address the need for information in contemporary areas of mechanical engineering The series is conceived as a comprehensive one that covers a broad range of concentrations important to mechanical engineering graduate education and research We are fortunate to have a distinguished roster of consulting editors on the advisory board each an expert in one of the areas of concentration The names of the consulting editors are listed on the facing page of this volume The areas of concentration are applied mechanics biomechanics computational mechanics dynamic systems and control energetics mechanics of materials processing thermal science and tribology I am pleased to present this volume in the Series Electromechanical Sensors and Actuators by Ilene Busch Vishniac The selection of this volume under scores again the interest of the Mechanical Engineering series to provide our readers with topical monographs as well as graduate texts in a wide variety of fields *Infrared Fiber Optics* Jas Sanghera, Ishwar D. Aggarwal, 1998-05-14 In the past 10 years there have been many developments in the field of infrared transmitting fiber optics This is highlighted by the many different fiber compositions that have been studied around the world for numerous practical applications This book reviews different fiber systems describing material properties techniques used to prepare the fibers and fiber properties with particular emphasis on optical properties These fibers possess unique optical mechanical and physical properties enabling many technologies Examples of applications are described within given chapters allowing an engineer or scientist to choose the most appropriate fiber for a desired application The introduction gives the reader an overview of transmission theory so that the basic concepts are clearly understood by someone new to the field The next several chapters describe the different types of infrared transmitting fibers including glass fibers such as those based on silica fluoride and chalcogenide glasses the crystalline fibers based on single or polycrystalline materials and hollow waveguides The commercial chemical sensing applications of some of these new fibers are described The final chapter summarizes the properties of the fibers and highlights future prospects **Fiber Optics Yellow Pages** , **NASA Technical Memorandum** , 1994 *Integrated Optics, Microstructures, and Sensors* Massood Tabib-Azar, 1995-09-30 Controlling the mechanical electrical magnetic and optical properties of materials by advanced fabrication methods Le Molecular Beam Epitaxy and Metal Organic Chemical Vapor Deposition has become the new

paradigm in our research era Sensors being the most vital part of the electronic data processing and decision making machines stand to gain the most from engineering of the properties of materials Microfabrication technology has already contributed significantly to the batch fabrication of micro sensors with higher over all qualities compared to their counterparts that are fabricated using other methods Batch fabrication of micro sensors i results in more uniform properties of co fabricated devices ii nearly eliminates the need for characterization of individual sensors and iii eliminates a need for laborious alignment procedures A less obvious benefit of using microfabrication methods is the possibility of precise control over the dimensions of the sensor This control enables engineering of some of the properties of the material which affect the sensor s operation There are many examples of this in the literature Optical sensors are known to have superior properties over their counterparts that use other i e electrostatic and magnetic means of detection To name a few these advantages are i immunity to electromagnetic interferences ii higher sensitivities compared to the other types of sensors iii simplicity of operation principles and iv simplicity of overall construction
