

ability to directly measure key engineering parameter values limit the applicability of performance specifications for geotechnical applications. Over time, advancements in measurement technologies will ideally reduce this obstacle.

Earthwork and Pavement Foundation Systems

Recent developments and improvements to in situ testing devices and integrated machine sensors (e.g., intelligent compaction rollers with accelerometer-based measurements of ground stiffness) have provided opportunities to develop more performance-oriented specifications in the areas of embankment and pavement subgrade and subbase construction.

Two specifications related to pavement foundation systems were prepared under the SHRP 2 R07 project and are included in Appendix C of the final report. The first, and perhaps easiest to implement, entails substituting traditional forms of proof rolling with roller-integrated compaction monitoring (RICM) proof mapping to verify that pavement subgrade support conditions are satisfactory. Compared with traditional proof rolling, proof mapping can provide

- Geospatially referenced documentation of an RICM measurement value (MV);
- Real-time information to the contractor during the construction process; and
- Results that can be correlated to subgrade support values, such as bearing capacity and stiffness.

The second specification represents a more comprehensive attempt to specify the construction of embankment and pavement foundation materials in terms of performance measures and quality statements. Key features of this specification include the following:

- Use of RICM technology to provide 100% sampling coverage to identify areas needing further work;
- Acceptance and verification testing, using performance measures and parameters—such as elastic modulus testing, shear strength, and permeability—that relate to design assumptions;
- Protocols for establishing target values for acceptance;
- Quality statements and assessment methods that require achievement of at least some overall minimal value during construction and achievement of a minimum level of spatial uniformity in a given lot area; and
- Protocols for data analysis and reporting such that the construction process is field-controlled in an efficient manner to ensure the final product meets design assumptions.

The specification contains two different implementation options.

1. RICM-MV maps to target locations for QA performance point measurements. RICM-MV georeferenced maps are used in this specification option to identify “weak” areas on which to focus QA point measurements. Proper QC measures

Specification Writers Handbook

Jonathan F. Hutchings

Specification Writers Handbook:

Spec Writers' Handbook John A. Weyl, 1989 *The Specifications Writer's Handbook* H. Leslie Simmons, 1985 *The Specification Writer's Handbook* H. Leslie Simmons, 1985-03-07 Covers the basic steps involved in preparing construction specifications Shows practitioners how to set up specifications writing departments within an architecture or engineering office and how to handle the day to day problems associated with writing specifications Describes necessary office equipment emphasizing computers and word processors **The Elements of Specification Writing** Richard Shelton Kirby, 1927 **Handbook of Quality Integrated Circuit Manufacturing** Robert Zorich, 2012-12-02 Here is a comprehensive practical guide to entire wafer fabrication process from A to Z Written by a practicing process engineer with years of experience this book provides a thorough introduction to the complex field of IC manufacturing including wafer area layout and design yield optimization just in time management systems statistical quality control fabrication equipment and its setup and cleanroom techniques In addition it contains a wealth of information on common process problems How to detect them how to confirm them and how to solve them Whether you are a new engineer or technician just entering the field a fabrication manager looking for ways to improve quality and production or someone who would just like to know more about IC manufacturing this is the book you are looking for Provides a readable practical overview of the entire wafer fabrication process for new engineers and those just entering this complex field Enables engineers and managers to improve production raise quality levels and solve problems that commonly occur in the fabrication process Presents the latest techniques and gives special attention to Japanese IC manufacturing techniques showing how they obtain outstanding quality

Construction Specifications Writing Mark Kalin, Robert S. Weygant, Harold J. Rosen, John R. Regener, 2011-09-13 Updated edition of the comprehensive rulebook to the specifier's craft With this latest update *Construction Specifications Writing* Sixth Edition continues to claim distinction as the foremost text on construction specifications This mainstay in the field offers comprehensive practical and professional guidance to understanding the purposes and processes for preparation of construction specifications This new edition uses real world document examples that reflect current writing practices shaped by the well established principles and requirements of major professional associations including the American Institute of Architects AIA the Engineers Joint Contract Documents Committee EJCDC and the Construction Specifications Institute CSI Also included are guidelines for correct terminology product selection organization of specifications according to recognized CSI formats and practical techniques for document production Fully revised throughout this Sixth Edition includes Updates to MasterFormat 2004 as well as SectionFormat PageFormat 2007 and Uniformat End of chapter questions and specification writing exercises Samples of the newly updated construction documents from the AIA New chapter on sustainable design and specifications for LEED projects Updated information on the role of specifications in Building Information Modeling BIM
