Structure Determination By Spectroscopic Methods Raul SanMartin, Maria Teresa Herrero, 2020-11-26

The authors travel with the reader through the challenging maze of structure determination showing how to distinguish between valuable and deceiving data from IR NMR and MS spectra extracting structural conclusions and putting all the pieces together to solve the structure elucidation puzzle Indeed human reasoning is key to combining the information contained in those bands signals and peaks by a rationale that enables the makeup of a chemical structure A number of increasingly more complex problems will act as trip segments and in addition to the spectra themselves each chapter is supplemented with figures and tables that decipher the above data and serve as maps for the journey

Organic Spectroscopy Workbook Tom Forrest, Jean-Pierre Rabine, Michel Rouillard, 2011-07-08 Spectroscopy is used in physical and analytical chemistry for the identification of substances through the spectrum emitted from or absorbed by them The derivation of structural information from spectroscopic data is now an integral part of many courses in chemistry and related subjects at most universities This workbook Features exercises to help develop the student s understanding of how structures are determined from spectra and to promote the student s own interpretation of different spectra Covers a large range of spectroscopic data including mass spectrometry infrared and ¹H and ¹³C nuclear magnetic resonance typically used in the routine analysis of small sized organic molecules Presents in full color in a workbook friendly format the spectra for interpretation with explanations and analyses on the facing page Related to the workbook the authors have an online resource of the problems featured in the workbook available at <http://spectros.unice.fr> By using the print edition alongside the online spectra students will be able to enhance their understanding of the interpretation of multiple spectra
