Speech Improvement Merritt Jones, Mary Pettas, 1969 **Speech Enhancement, Modeling and Recognition- Algorithms and Applications** S. Ramakrishnan, 2012-03-14 This book on Speech Processing consists of seven chapters written by eminent researchers from Italy Canada India Tunisia Finland and The Netherlands The chapters covers important fields in speech processing such as speech enhancement noise cancellation multi resolution spectral analysis voice conversion speech recognition and emotion recognition from speech The chapters contain both survey and original research materials in addition to applications This book will be useful to graduate students researchers and practicing engineers working in speech processing Thesaurus of ERIC Descriptors ,1972 *DFT-Domain Based Single-Microphone Noise Reduction for Speech Enhancement* Richard C. Hendriks, Timo Gerkmann, Jesper Jensen, 2022-05-31 As speech processing devices like mobile phones voice controlled devices and hearing aids have increased in popularity people expect them to work anywhere and at any time without user intervention However the presence of acoustical disturbances limits the use of these applications degrades their performance or causes the user difficulties in understanding the conversation or appreciating the device A common way to reduce the effects of such disturbances is through the use of single microphone noise reduction algorithms for speech enhancement The field of single microphone noise reduction for speech enhancement comprises a history of more than 30 years of research In this survey we wish to demonstrate the significant advances that have been made during the last decade in the field of discrete Fourier transform domain based single channel noise reduction for speech enhancement Furthermore our goal is to provide a concise description of a state of the art speech enhancement system and demonstrate the relative importance of the various building blocks of such a system This allows the non expert DSP practitioner to judge the relevance of each building block and to implement a close to optimal enhancement system for the particular application at hand Table of Contents Introduction Single Channel Speech Enhancement General Principles DFT Based Speech Enhancement Methods Signal Model and Notation Speech DFT Estimators Speech Presence Probability Estimation Noise PSD Estimation Speech PSD Estimation Performance Evaluation Methods Simulation Experiments with Single Channel Enhancement Systems Future Directions **Audio Source Separation and Speech Enhancement** Emmanuel Vincent, Tuomas Virtanen, Sharon Gannot, 2018-07-24 Learn the technology behind hearing aids Siri and Echo Audio source separation and speech enhancement aim to extract one or more source signals of interest from an audio recording involving several sound sources These technologies are among the most studied in audio signal processing today and bear a critical role in the success of hearing aids hands free phones voice command and other noise robust audio analysis systems and music post production software Research on this topic has followed three convergent paths starting with sensor array processing computational auditory scene analysis and machine learning based approaches such as independent component analysis respectively This book is the first one to provide a comprehensive overview by presenting

the common foundations and the differences between these techniques in a unified setting Key features Consolidated perspective on audio source separation and speech enhancement Both historical perspective and latest advances in the field e g deep neural networks Diverse disciplines array processing machine learning and statistical signal processing Covers the most important techniques for both single channel and multichannel processing This book provides both introductory and advanced material suitable for people with basic knowledge of signal processing and machine learning Thanks to its comprehensiveness it will help students select a promising research track researchers leverage the acquired cross domain knowledge to design improved techniques and engineers and developers choose the right technology for their target application scenario It will also be useful for practitioners from other fields e g acoustics multimedia phonetics and musicology willing to exploit audio source separation or speech enhancement as pre processing tools for their own needs
