The Arts And Humanity:

The Humanities Through the Arts F. David Martin, Lee A. Jacobus, 1974 *The Arts and Humanity* Charles William Cooper, 1947 *The Arts and Humanity* Charles William Cooper, 1952 *Humanities Through the Arts* F. David Martin, Lee A. Jacobus, 2023

The Humanities through the Arts tenth edition explores the humanities with an emphasis on the arts. Examining the relationship of the humanities to values, objects, and events important to people is central to this book. We make a distinction between artists and other humanists. Artists reveal values while other humanists examine or reflect on values. We study how values are revealed in the arts while keeping in mind a basic question: What is art? Judging by the existence of ancient artifacts, we see that artistic expression is one of the most fundamental human activities. It binds us together as a people by revealing the most important values of our culture.

As digital technologies occupy a more central role in working and everyday human life, individual and social realities are increasingly constructed and communicated through digital objects which are progressively replacing and representing physical objects. They are even shaping new forms of virtual reality. This growing digital transformation, coupled with technological evolution and the development of computer computation, is shaping a cyber society whose working mechanisms are grounded upon the production, deployment, and exploitation of big data. In the arts and humanities, however, the notion of big data is still in its embryonic stage, and only in the last few years have arts and cultural organizations and institutions, artists and humanists, started to investigate, explore, and experiment with the deployment and exploitation of big data as well as understand the possible forms of collaborations based on it.

Big Data in the Arts and Humanities: Theory and Practice explores the meaning, properties, and applications of big data. This book examines the relevance of big data to the arts and humanities, digital humanities, and management of big data with and for the arts and humanities. It explores the reasons and opportunities for the arts and humanities to embrace the big data revolution. The book also delineates managerial implications to successfully shape a mutually beneficial partnership between the arts and humanities and the big data and computational digital-based sciences. Big data and arts and humanities can be likened to the rational and emotional aspects of the human mind. This book attempts to integrate these two aspects of human thought to advance decision making and to enhance the expression of the best of human life.
