In recent times he has been arguing for implementation of a Service Science which is linked to the rights and needs of mankind. A survivor of the Hiroshima atomic bomb, he majored in astrophysics at the University of Tokyo and wrote on the history of astronomy for his PhD and later on the history of science for his Harvard PhD.

Astrophysics from Spacelab P.L. Bernacca, Remo Ruffini, 2012-12-06

A meeting on Astrophysics from Spacelab was held at the International Centre for Theoretical Physics, Trieste, in the Autumn of 1976. The scope of the meeting was to bring to the attention of an increasing number of physicists and astrophysicists, including scientists from developing countries, the new facilities made available by the combination of the Shuttle and the Spacelab programmes. This book starts from that meeting and includes, together with reports presented in Trieste, duly updated, a few additional reviews on selected topics. In the first part, D.J. Shapland and G. Giampalmo describe the Shuttle and the Spacelab, present the design and the programmatic data of these advanced transportation systems and orbital laboratories. Vittorio Manno introduces the scientific programmes coordinated and led to execution by the European Space Agency (ESA). Programmes in Astronomy and Astrophysics. J.D. Rosendhal describes the NASA Programmes in Astronomy and Astrophysics, summarizes the activities in solar physics, high energy astrophysics and astronomy planned in the United States of America by the National Aeronautics and Space Administration, as well as the expected use of the space shuttle and Spacelab in their first year of operation.

Mapping the Spectrum Klaus Hentschel, 2002

Ever since the boom of spectrum analysis in the 1860s, spectroscopy has become one of the most fruitful research technologies in analytic chemistry, physics, astronomy and other sciences. This book is the first in-depth study of the ways in which various types of spectra, especially the sun's Fraunhofer lines, have been recorded, displayed and interpreted. The book assesses the virtues and pitfalls of various types of depictions, including hand sketches, woodcuts, engravings, lithographs, and from the late 1870s onwards, photomechanical reproductions. The material of a 19th-century engraver or lithographer, the daily research practice of a spectroscopist in the laboratory or a student's use of spectrum posters in the classroom, all are looked at and documented here. For pioneers of photography, such as John Herschel or Hermann Wilhelm Vogel, the spectrum even served as a prime test object for gauging the color sensitivity of their processes. This is a broad contextual portrayal of the visual culture of spectroscopy in the 19th and early 20th centuries. The illustrations are not confined to spectra; they show instruments, laboratories, people at work, and plates of printing manuals. The result is a multifaceted description focusing on the period from Fraunhofer up to the beginning of Bohr's quantum theory. A great deal of new and fascinating material from two dozen archives has been included. A must for anyone interested in the history of modern science or in research practice using visual representations.
