The Dodo and the Solitaire Jolyon C. Parish,2012-12-03

This account of two extinct bird species offers an amazing amount of history references facts maps and illustrations Library Journal The Dodo and the Solitaire is the most comprehensive book to date about these two famously extinct birds It contains all the known contemporary accounts and illustrations of the dodo and solitaire covering their history after extinction and discussing their ecology classification phylogenetic placement and evolution Both birds were large and flightless and lived on inhabited islands some five hundred miles east of Madagascar The first recorded descriptions of the dodo were provided by Dutch sailors who encountered them in 1598 and within a century the dodo was extinct So quickly did the bird disappear that there is insufficient evidence to form an entirely accurate picture of its appearance and ecology and the absence has led to much speculation This extraordinary book pieces together the story of these two lost species from the fragments that have been left behind An up to date and comprehensive review of everything we know about the dodo and solitaire Journal of Vertebrate Paleontology

Return of the Crazy Bird Clara Pinto-Correia,2006-04-18 Using the history of the concept of extinction with the dodo as a case study Pinto Correia carefully weaves together story fragments to give a cohesive eye opening view of 17th century exploration and the grave ramifications it had for the survival and extinction of many species More importantly she shows us the intellectual underpinnings of the old view that it was acceptable for some animals to die out Within this narrative we can see what the modern view of the dodo tells us about the history of our changing understanding and valuation of nature and our place in it Strong writing powered by lively historical anecdotes and sober insights into human behavior makes this beautifully illustrated book a page turner to the end

Nevermore: A Book of Hours David Day,2011 Nevermore A Book of Hours is a modern bestiary and a book of remembrance a distillation of 30 years of research and meditation by author and poet David Day an acknowledged authority on the extinction of species In its conception and approach Nevermore is unlike any other natural history It is laden with a combined sense of wonder and savagery in its vivid descriptions of first encounters with and last glimpses of long forgotten species It is beautifully illustrated by four distinguished wildlife artists and unfolds as a requiem to vanished species

Nature's Ghosts Mark V. Barrow,2011-04-15 The rapid growth of the American environmental movement in recent decades obscures the fact that long before the first Earth Day and the passage of the Endangered Species Act naturalists and concerned citizens recognized and worried about the problem of human caused extinction As Mark V Barrow reveals in Nature s Ghosts the threat of species loss has haunted Americans since the early days of the republic From Thomas Jefferson s day when the fossil remains of such fantastic lost animals as the mastodon and the woolly mammoth were first reconstructed through the pioneering

conservation efforts of early naturalists like John James Audubon and John Muir Barrow shows how Americans came to understand that it was not only possible for entire species to die out but that humans themselves could be responsible for their extinction. With the destruction of the passenger pigeon and the precipitous decline of the bison, professional scientists and wildlife enthusiasts alike began to understand that even very common species were not safe from the juggernaut of modern industrial society. That realization spawned public education and legislative campaigns that laid the foundation for the modern environmental movement and the preservation of such iconic creatures as the bald eagle, the California condor, and the whooping crane. A sweeping, beautifully illustrated historical narrative that unites the fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect them, *Nature's Ghosts* offers an unprecedented view of what we've lost and a stark reminder of the hard work of preservation still ahead.

Ecology & Environ Mgmt Roger Park, 2019-04-09. The aim of the present volume is to review the effects of human activity on physical environment processes and this is justified not only as a complement to the approach taken by G. P. Marsh in his volume *Man and Nature* (1864) but also as a sequel to the work produced since 1864 with contributions since the mid nineteenth century to the study of the Preserving Our Natural Heritage, 1977.

Threatened and Recently Extinct Vertebrates of the World Matthew Richardson, 2023-03-09. Habitat loss and degradation are currently the main anthropogenic causes of species extinctions. The root cause is human overpopulation. This unique volume provides for the very first time a comprehensive overview of all threatened and recently extinct mammals, birds, reptiles, amphibians, and fishes within the context of their locations and habitats. The approach takes a systematic examination of each biogeographic realm and region of the world, both terrestrial and marine, but with a particular emphasis on geographic features such as mountains, islands, and coral reefs. It reveals patterns useful in biodiversity conservation, helps to put it all into perspective, and ultimately serves as both a baseline from which to compare subsequent developments as well as a standardization of the way threatened species are studied.
