Ickes, 2012-12-06 Several years ago two of my colleagues and I had the opportunity to interview Fritz Heider perhaps the most influential theorist in the field of social psychology Harvey Ickes Kidd 1976 During our interview Heider affirmed a belief that had guided his career since the 1920s the belief that the study of human relationships is the most important task in which social scientists can engage Although many social scientists would profess to share this belief it is nonetheless true that the study of human relationships has been one of the most neglected tasks in the history of the social sciences including psychology What Heider found in the 1920s that most psychologists acknowledged the importance of studying human relationships but at the same time tended to focus

their own research on more tractable topics such as memory and cognition is still very much evident in the 1980s Even within the more specific domain of social psychology a majority of researchers still choose to address those hybrid topics social cognition social categorization and stereotyping person memory etc that relate most directly to traditional areas of psychological research Still other researchers while choosing to study such important interpersonal phenomena as altruism aggression conflict and interpersonal attraction tend to focus so exclusively on these isolated and abstracted phenomena that they fail to provide a more inclusive view of the relationships in which these phenomena occur Action and Inaction in a Social World Dolores Albarracín, 2021-02-18 This book explains how actions and inactions change in social contexts connecting psychological research with problems of interest in communication public health economics organizational and consumer behavior and environmental sciences This cutting edge multi disciplinary view also informs intervention design and gauges social media effects *How People Learn II* National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Science Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on How People Learn II: The Science and Practice of Learning, 2018-10-27 There are many reasons to be curious about the way people learn and the past several decades have seen an explosion of research that has important implications for individual learning schooling workforce training and policy In 2000 *How People Learn Brain Mind Experience and School Expanded Edition* was published and its influence has been wide and deep The report summarized insights on the nature of learning in school aged children described principles for the design of effective learning environments and provided examples of how that could be implemented in the classroom Since then researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning individual and cultural variability related to learning and educational technologies In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan there have been important discoveries about influences on learning particularly sociocultural factors and the structure of learning environments *How People Learn II Learners Contexts and Cultures* provides a much needed update incorporating insights gained from this research over the past decade The book expands on the foundation laid out in the 2000 report and takes an in depth look at the constellation of influences that affect individual learning *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults **The Perception of People** Perry R. Hinton, 2015-09-16 What are other people like How do we decide if someone is friendly honest or clever What assumptions do we develop about them and what explanations do we give for their behaviour *The Perception of People* examines key topics in psychology to explore how we make sense of other people and ourselves Do our decisions result from careful consideration and a desire to produce an accurate perception Or do we jump to conclusions in our judgements and rely on expectations and stereotypes To answer these questions the book examines models of person

perception and provides an up to date and detailed account of the central psychological research in this area focusing in particular on the social cognitive approach It also considers and reflects on the involvement of culture in cognition and includes coverage of relevant research in culture and language that influence the way we think and speak about others As well as providing a valuable text in social psychology The Perception of People also offers a direction for the integration of ideas from cognitive and social psychology with those of cultural psychology anthropology sociology philosophy and social history Clear explanation of modern research is placed in historical and cultural context to provide a fuller understanding of how psychologists have worked to understand how people interpret the world around them and make sense of the people within it Ideal reading for students of social psychology this engaging text will also be useful in subject areas such as communication studies and media studies where the perception of people is highly relevant **Handbook of**
