The Mutual Construction of Statistics and Society Ann Rudinow Saetnan, Heidi Mork Lomell, Svein Hammer, 2010-09-13 Statistics are often seen as simple straightforward and objective descriptions of society However what we choose to count what we choose not to count who does the counting and the categories and values we choose to apply when counting matter This volume addresses the ways in which statistics and numbers are gathered and applied in social science research The contributors argue that we must become more aware of the power and the limitations of statistics Learning statistics needs

to be about more than simply mastering the techniques of using the tool it needs to also be about learning the dangers of that tool and learning to control it within social and ethical bounds These dangers lie in the routines through which statistics are applied the discourses from which they emerge and into which they are deployed the power relations created by those discourses and the assumptions meanings and categories statistics carry with them in those discourses This volume will be necessary reading for students and scholars using quantitative data within the social sciences

Understanding College and University Organization James L. Bess, Jay R. Dee, 2023-07-03 Now available in paperback this two volume work is intended to help readers develop powerful new ways of thinking about organizational principles and apply them to policy making and management in colleges and universities The book is written with two audiences in mind administrative and faculty leaders in institutions of higher learning and students both doctoral and Master s degree studying to become upper level administrators leaders and policy makers in higher education It systematically presents a range of theories that can be applied to many of the difficult management situations that college and university leaders encounter It provides them with the theoretical background to knowledgeably evaluate the many new ideas that emerge in the current literature and in workshops and conferences The purpose is to help leaders develop their own effective management style and approaches and feel confident that their actions are informed by appropriate theory and knowledge of the latest research in the field Without theory organizational leaders are forced to treat each problem that they encounter as unique as if it were a first time occurrence While leaders may have some experience with a particular issue their solutions are usually not informed by the accumulated wisdom of others who have already encountered and resolved similar situations The authors approach the theory of the organization and administration of colleges and universities from three quite different perspectives or paradigms each relying on different assumptions about the reality of organizational life in colleges and universities The positivist paradigm primarily an omnibus systems theory integrates the chapters into a comprehensive yet easily accessible whole Social constructionism the second paradigm is introduced in each chapter to illuminate the difficulty of seeking and finding meaningful consensus on problems and policies while also addressing important ethical issues that tend to be overlooked in leadership thought and action The third paradigm postmodernism draws attention to difficulties of logic and communication under the constraints of strictly linear thinking that authorities at all levels attempt to impose on organizations This multiple paradigm approach enables readers to become more cognizant of their own assumptions how they may differ from those of others in their organization and how those differences may both create difficulties in resolving problems and expand the range of alternatives considered in organizational decision making The book offers readers the tools to balance the real world needs to succeed in today s challenging and competitive environment with the social and ethical aspirations of all its stakeholders and society at large The authors aim is to elucidate how administration can be made more efficient and effective through rational decision making while also respecting humanistic values This approach highlights a range of phenomena

that require attention if the institution is ultimately to be considered successful Also available Volume 1 The State of the SystemTwo volume set Comparative CSR and Sustainability Gabriel Donleavy, Carlos Noronha, 2022-12-30 This book breaks new ground by providing a structured and cohesive set of contributions on the actions developments problems and theories of corporate social responsibility CSR With new case studies from the UN s Least Developed Countries LDCs contributors in this book investigate how firms in Eastern and Western countries are responding to and making use of evolving CSR guidelines The book addresses the following questions is CSR simply greenwashing or an authentic commitment to responsible corporate citizenship Has globalization drawn CSR conduct in LDCs closer to that of industrialized countries Stakeholder theory actor network theory and a new orbital theory of accountability are applied to give coherence to the case studies Other chapters address greenwashing in reports the impact of CSR in socially stigmatized occupations an analysis on what responsibility precisely entails in CSR and the interface between law and CSR The book also considers the impact of COVID 19 on the hospitality industry and includes a contribution from Ukrainian scholars one written while their city of Kharkiv was under attack by Russian forces This book will be a useful reference to those interested in discussions on crises climate change and SDGs and realizing sustainable goals through CSR
