languages existed in the past but became extinct Using a Darwinian approach this book seeks to explain this rich cultural variation There are a number of theoretical reasons to believe that cultural diversification might be tree like that is phylogenetic material and non material culture is clearly inherited by descendants there is descent with modification and languages appear to be hierarchically related There are also a number of theoretical reasons to believe that cultural evolution is not tree like cultural inheritance is not Mendelian and can indeed be vertical horizontal or oblique evidence of borrowing abounds cultures are not necessarily biological populations and can be transient and complex Here for the first time this title tackles these questions of cultural evolution empirically and quantitatively using a range of case studies from Africa the Pacific Europe Asia and America A range of powerful theoretical tools developed in evolutionary biology is used to test detailed hypotheses about historical patterns and adaptive functions in cultural evolution Evidence is amassed from archaeological linguist and cultural datasets from both recent and historical or pre historical time periods A unifying theme is that the phylogenetic approach is a useful and powerful framework both for describing the evolutionary history of these traits and also for testing adaptive hypotheses about their evolution and co evolution Contributors include archaeologists anthropologists evolutionary biologists and linguists and this book will be of great interest to all those involved in these areas
