Early Palaeozoic Biogeography and Palaeogeography D.A.T. Harper, T. Servais ,2014-01-27 The Early Palaeozoic was a critical interval in the evolution of marine life on our planet Through a window of some 120 million years the Cambrian Explosion Great Ordovician Biodiversification Event End Ordovician Extinction and the subsequent Silurian Recovery established a steep trajectory of increasing marine biodiversity that started in the Late Proterozoic and continued into the Devonian Biogeography is a key property of virtually all organisms their distributional ranges mapped out on a mosaic of changing palaeogeography have played important roles in modulating the diversity and evolution of marine life This Memoir first introduces the content some of the concepts involved in describing and interpreting palaeobiogeography and the changing Early Palaeozoic geography is illustrated through a series of time slices The subsequent 26 chapters compiled by some 130 authors from over 20 countries describe and analyse distributional and in many cases diversity data for all the major biotic groups plotted on current palaeogeographic maps Nearly a quarter of a century after the publication of the Green Book Geological Society London Memoir12 edited by McKerrow and Scotese improved stratigraphic and taxonomic data together with more accurate digitized palaeogeographic maps have confirmed the central role of palaeobiogeography in understanding the evolution of Early Palaeozoic ecosystems and their biotas *The Carboniferous Timescale* S.G. Lucas, J-W. Schneider, X. Wang, S. Nikolaeva,2022-04-26 The print edition is published as 2 hardback volumes parts A and B and sold as a set The Carboniferous was the time of the assembly of Pangaea by the collision of the Gondwanan and Larussian supercontinents and the principal interval of the late Paleozoic ice ages These tectonic and climatic events caused dramatic sea level fluctuations and climate changes and produced a Carboniferous world that was diverse topographically and climatologically perhaps only rivalled in that diversity by the late Cenozoic world Furthermore the Carboniferous was a time of the accumulation of vast coal deposits of great economic and societal significance The temporal ordering of

geological and biotic events during Carboniferous time thus is critical to the interpretation of some unique and pivotal events in Earth history This temporal ordering is based on the Carboniferous timescale which has been developed and refined for nearly two centuries This book reviews the history of the development of the Carboniferous chronostratigraphic scale and includes comprehensive analyses of Carboniferous radioisotopic ages magnetostratigraphy isotope based correlations cyclostratigraphy and timescale relevant marine and non marine biostratigraphy and biochronology

Fossil Behavior Compendium Arthur J. Boucot, George O. Poinar Jr., 2010-04-12 In this complete and thorough update of Arthur Boucot's seminal work *Evolutionary Paleobiology of Behavior and Coevolution* Boucot is joined by George Poinar who provides additional expertise and knowledge on protozoans and bacteria as applied to disease Together they make the *Fossil Behavior Compendium* wider in scope covering all relevant animals

Sedimentary Basins and Crustal Processes at Continental Margins G.M. Gibson, F. Roure, G. Manatschal, 2015-10-19 Continental margins and their fossilized analogues are important repositories of natural resources With better processing techniques and increased availability of high resolution seismic and potential field data imaging of present day continental margins and their embedded sedimentary basins has reached unprecedented levels of refinement and definition as illustrated by examples described in this volume This in turn has led to greatly improved geological geodynamic and numerical models for the crustal and mantle processes involved in continental margin formation from the initial stages of rifting through continental rupture and break up to development of a new ocean basin Further informing these models and contributing to a better understanding of the features imaged in the seismic and potential field data are observations made on fossilized fragments of exhumed subcontinental mantle lithosphere and ocean continent transition zones preserved in ophiolites and orogenic belts of both Palaeozoic and Mesozoic age from several different continents including Europe South Asia and Australasia
