Forthcoming Books Rose Arny, 2000 **Medicinal & Aromatic Plants Abstracts**, 1997 **Gazzetta Chimica Italiana**, 1996 *Advanced Technologies for the Quality Control and Standardization of Plant Based Medicines* Jiang Xu, Caroline Howard, 2020-06-18 Herbs and herbal products are of paramount importance for human health To be able to guarantee safety and quality standards and testing methods are needed Pharmacopoeias contain quality control protocols setting the standards which are then required by governments The quality traits are many including the intrinsic variables of medicinal plant e.g. the levels of the active compounds and the absence of possibly natural occurring toxic compounds On the other hand many quality traits are related to agricultural conditions and practices or to the harvesting and post harvest processing With so many variables quality control of the end product becomes extremely complex time consuming and costly To ensure the quality of medicinal plants for human consumption quality management the use of good practices at each step from seed to final product becomes a crucial aspect In general quality control includes the inspection of the product's identity purity and content based on its physical chemical or biological properties To ensure the quality of herbal medications criteria such as botanical quality type of preparation physical constants adulteration contaminants chemical constituents pesticides residues et al should be examined Meanwhile authentication of herbs is needed to avoid possible adulteration or contaminating plants even toxic herbs such as *Aristolochia* species Many of the methods are long standing such as microscopy in combination with color reactions but some 50 years ago chromatography developed as a major tool for both qualitative and quantitative analysis of herbal preparations Nowadays research is working on the improvement of these methods and on the development of novel tools For instance next generation sequencing and mass spectrometry imaging are emerging as new technologies for the quality control of herbal medicines With these technologies quick testing of herbal products and of mixed herbal powder preparations including the testing for specific plant parts botanical drugs can be achieved Also novel chemical tools such as metabolomics and Near Infrared Red NIR spectroscopy are being developed as powerful tools to identify and to link these with activity by using chemometric tools such as multivariate analysis Finally progress of informatic tools such as

machine learning helps to deal with the big data generated by sequencing or mass spectrometry. However, these new technologies like all other new born technologies should be tested and perfected for a broad range of products.
