Ferreira,Michele Miozzo,2014 Featuring contributions from psycholinguists cognitive neuroscientists and linguists this book provides a comprehensive multidisciplinary review of the core aspects of human language processing *An Introduction to the Nature and Functions of Language* Howard Jackson,Peter Stockwell,1996 Addressing the Language Theory section of the NEAB A Level English Language syllabus this textbook covers language and its description the linguistic system of English language change language acquisition language and society and language in use There are exercises and activities throughout the book and suggestions for project work and extended study The book assumes very little prior knowledge of the subject *Linguistics* Adrian Akmajian,Richard A. Demer,Ann K. Farmer,Robert M. Harnish,2001 *Linguistics an introduction to language and communication* **The Sound Shape of Language** Roman Jakobson,Linda R. Waugh,2002 Reading this volume transported me back to Harvard and MIT lecture halls of the 1960s where weekly Roman Jakobson would spellbind his audience this reviewer included developing his vision of language through impassioned exposition deft and devastating allusions to critical literature anecdotes with the force of parables metaphors of mythic imagery and above all else overriding verbal artistry truly in his own phrase In the poetry of grammar *The Sound Shape of Language* his collaboration with Linda R Waugh a scholar who has devoted considerable attention to an exposition and elaboration of Jakobsonian views fortunately has preserved in print the authoritative lectorial voice Michael Silverstein in *Journal of Communication* **Phonetics** Martin J Ball,Joan Rahilly,2014-02-04 In their comprehensive new introduction to phonetics Ball and Rahilly offer a detailed explanation of the process of speech production from the anatomical initiation of sounds and their modification in the larynx through to the final articulation of vowels and consonants in the oral and nasal tracts This textbook is one of the few to give a balanced account of segmental and suprasegmental aspects of speech showing clearly that the communication chain is incomplete without accurate production of both individual speech sounds segmental features and aspects such as stress and intonation suprasegmental features Throughout the book the authors provide advice on transcription primarily using the International Phonetic Alphabet IPA Students are expertly guided from basic attempts to record speech sounds on paper to more refined accounts of phonetic detail in speech The authors go on to explain acoustic phonetics in a manner accessible both to new students in phonetics and to those who wish to advance their knowledge of key pursuits in the area including the sound spectrograph They describe how speech waves can be measured as well as considering how they are heard and decoded by listeners discussing both physiological and neurological aspects of hearing and examining the methods of psychoacoustic experimentation A range of instrumentation for studying speech production is also presented The next link is acoustic phonetics the study of speech transmission Here the authors introduce the basic concepts of sound acoustics and the

instrumentation used to analyse the characteristics of speech waves Finally the chain is completed by examining auditory phonetics and providing a fascinating psychoacoustic experimentation used to determine what parts of the speech signal are most crucial for listener understanding The book concludes with a comprehensive survey and description of modern phonetic instrumentation from the sound spectrograph to magnetic resonance imaging MRI The Digital Signal Processing Handbook VIJAY MADISETTI,1997-12-29

Dissecting the function of networks underpinning language repetition
Matthew A Lambon Lambon Ralph, Marcelo L Berthier, 2014-12-17

In the 19th century ground breaking observations on aphasia by Broca and Wernicke suggested that language function depends on the activity of the cerebral cortex At the same time Wernicke and Lichtheim also elaborated the first large scale network model of language which incorporated long range and short range transcortical connections white matter pathways in language processing The arcuate fasciculus dorsal stream was traditionally viewed as the major language pathway for repetition but scientists also envisioned that white matter tracts travelling through the insular cortex ventral stream and transcortical connections may take part in language processing Modern cognitive neuroscience has provided tools including neuroimaging which allow the in vivo examination of short and long distance white matter pathways binding cortical areas essential for verbal repetition However this state of the art on the neural correlates of language repetition has revealed contradictory findings with some researchers defending the role of the dorsal and ventral streams whereas others argue that only cortical hubs Sylvian parieto temporal cortex Spt are crucially relevant An integrative approach would conceive that the interaction between these structures is essential for verbal repetition For instance different sectors of the cerebral cortex e g Spt inferior frontal gyrus anterior insula act as hubs dedicated to short term storage of verbal information or articulatory planning and these areas in turn interact through forward and backward white matter projections Importantly white matter pathways should not be considered mere cable like connections as changes in their microstructural properties correlate with focal cortical activity during language processing tasks Despite considerable progress many outstanding questions await response The articles in this Research Topic tackle many different and critical new questions including 1 how white matter pathways instantiate dialogues between different cortical language areas 2 what are the specific roles of different white matter pathways in language functions in normal and pathological conditions 3 what are the language consequences of discrete damage to branches of the dorsal and ventral streams 4 what are the consequences e g release from inhibition of damage to the left white matter pathways in contralateral ones and viceversa 5 how these pathways are reorganised after brain injury 5 can the involvement sparing of white matter pathways be used in outcome prediction and treatment response and 5 can the microstructure of white matter pathways be remodelled with intensive rehabilitation training or biological approaches This Research Topic includes original studies and opinion and review articles which describe new data as well as provocative and insightful interpretations of the recent literature on the role of white matter pathways in verbal repetition in normal and pathological conditions A brief highlight summary of each is provided below
