Parapsychology Etzel Cardeña, John Palmer, David Marcusson-Clavertz, 2015-08-14 Many people have experienced such unusual phenomena as dreams that later seem to correspond with unforeseeable events thinking of a long lost friend just before he or she unexpectedly calls or the ability to feel the presence of deceased loved ones What many do not realize is that these types of experiences have been researched for more than a century by eminent scientists including Nobel laureates Most of these researchers have concluded that some of these phenomena do occur although we are far from explaining them to everyone's satisfaction This book is the first in almost 40 years to provide a comprehensive scientific overview of research in the field of parapsychology explaining what we know and don't know about so called psi phenomena such as telepathy precognition or psychokinesis Contributors evaluate the evidence for these phenomena accounting for factors such as selective memory wish fulfillment and incorrect methods or analyses in some cases offering psychological physical and biological theories Instructors considering this book for use in a course may request an examination copy here

Neuroaesthetics: Exploring Beauty Within And Around Us Yan Bao, Ernst Poppel, Richu Wang, Semir Zeki, 2024-12-13 Neuroaesthetics has become an important new field in the sciences bringing together researchers from cognitive science as a general term including brain science psychology anthropology ethology artificial intelligence the humanities including linguistics philosophy and the arts artists from the visual arts music and poetry Thus neuroaesthetics is a prime example of successful interdisciplinarity In the book *Neuroaesthetics Exploring Beauty Within and Around Us* we distinguish and represent in several articles two different kinds of interdisciplinarity

Horizontal interdisciplinarity brings together in a complementary way different fields like as an example psychology linguistics and poetry Vertical interdisciplinarity refers to research on data generating mechanisms like as an example neural activities in the brain being associated with subjective experiences of beauty In the book articles refer to the visual arts art in space to faces in art to poetry and music art in time and to general ideas bridging art and science This is a unique collection of articles with a broad scope

The Janus-Face of Language: Where Are the Emotions in Words and the Words in Emotions? Cornelia Herbert, Thomas Ethofer, Andreas J. Fallgatter, Peter Walla, Georg Northoff, 2018-09-28 Language has long been considered independent from emotions In the last few years however research has accumulated empirical evidence against this theoretical belief of a purely cognitive based foundation of language In particular through research on emotional word processing it has been shown that processing of emotional words activates emotional brain structures elicits emotional facial expressions and modulates action tendencies of approach and avoidance probably in a similar manner as processing of non verbal emotional stimuli does In addition it has been shown that emotional content is already processed in the visual cortex in a facilitated manner which suggests that processing of emotional language content is able to circumvent in depth semantic analysis Yet this is only one side of the coin Very recent research putting words into context suggests that language may also construe emotions and that by studying word processing one can provide a window to one's own feelings All in all the empirical observations support the thesis of a close relationship between language and emotions at the level of word meaning as a specific evolutionary achievement of the human species As such this relationship seems to be different from the one between emotions and speech where emotional meaning is conveyed by nonverbal features of the voice But what does this relationship between written words and emotions theoretically imply for the processing of emotional information The present Research Topic and its related articles aim to provide answers to this question This book comprises several experimental studies investigating the brain structures and the time course of emotional word processing Included are studies examining the affective core dimensions underlying affective word processing and studies that show how these basic affective dimensions influence word processing in general as well as the interaction between words feelings and expressive behavior In addition new impetus comes from studies that on the one hand investigate how task sublexical and intrapersonal factors influence emotional word processing and on the other hand extend emotional word processing to the domains of social context and self related processing Finally future perspectives are outlined including research on emotion and language acquisition culture and multilingualism In summary this textbook offers scientists from different disciplines insight into the neurophysiological behavioral and subjective mechanisms underlying emotion and language interactions It gives new impulses to existing theories on the embodiment of language and emotion and provides new ways of looking at emotion cognition interactions

21st Century Oliver Grau,2013-08-16 Scholars from science art and humanities explore the meaning of our new image worlds and offer new strategies for visual analysis We are surrounded by images as never before on Flickr Facebook and YouTube on thousands of television channels in digital games and virtual worlds in media art and science Without new efforts to visualize complex ideas structures and systems today s information explosion would be unmanageable The digital image represents endless options for manipulation images seem capable of changing interactively or even autonomously This volume offers systematic and interdisciplinary reflections on these new image worlds and new analytical approaches to the visual Imagery in the 21st Century examines this revolution in various fields with researchers from the natural sciences and the humanities meeting to achieve a deeper understanding of the meaning and impact of the image in our time The contributors explore and discuss new critical terms of multidisciplinary scope from database economy to the dramaturgy of hypermedia from visualizations in neuroscience to the image in bio art They consider the power of the image in the development of human consciousness pursue new definitions of visual phenomena and examine new tools for image research and visual analysis The Fantastic in Modern Japanese Literature Susan Napier,2005-07-22 Modern Japan s repressed anxieties fears and hopes come to the surface in the fantastic A close analysis of fantasy fiction film and comics reveals the ambivalence felt by many Japanese towards the success story of the nation in the twentieth century The Fantastic in Modern Japanese Literature explores the dark side to Japanese literature and Japanese society It takes in the nightmarish future depicted in the animated film masterpiece Akira and the pastoral dream worlds created by Japan s Nobel Prize winning author Oe Kenzaburo A wide range of fantasists many discussed here in English for the first time form the basis for a ground breaking analysis of utopias dystopias the disturbing relationship between women sexuality and modernity and the role of the alien in the fantastic **Optical and Digital Image Processing** Gabriel Cristobal,Peter Schelkens,Hugo

Thienpont,2013-02-12 In recent years Moore s law has fostered the steady growth of the field of digital image processing though the computational complexity remains a problem for most of the digital image processing applications In parallel the research domain of optical image processing has matured potentially bypassing the problems digital approaches were suffering and bringing new applications The advancement of technology calls for applications and knowledge at the intersection of both areas but there is a clear knowledge gap between the digital signal processing and the optical processing communities This book covers the fundamental basis of the optical and image processing techniques by integrating contributions from both optical and digital research communities to solve current application bottlenecks and give rise to new applications and solutions Besides focusing on joint research it also aims at disseminating the knowledge existing in both domains Applications covered include image restoration medical imaging surveillance holography etc a very good book that deserves to be on the bookshelf of a serious student or scientist working in these areas Source Optics and Photonics News **Cutting Edge Robotics 2010** Vedran Kordic,2010-10-01 Robotics research especially mobile robotics is a young

field Its roots include many engineering and scientific disciplines from mechanical electrical and electronics engineering to computer cognitive and social sciences Each of this parent fields is exciting in its own way and has its share in different books This book is a result of inspirations and contributions from many researchers worldwide It presents a collection of a wide range of research results in robotics scientific community We hope you will enjoy reading the book as much as we have enjoyed bringing it together for you
