The Bang-Jensen Case United States. Congress. Senate. development of the world In no way will it be a digression from the direction which we have initially defined for our Yearbook but just an extension of the scope of the research The matter is that there are two kinds of history the history of nature or more exactly the Universe and the Earth and the history of humans and mankind It is not surprising that the idea of historicism penetrated almost every scientific field At the same time the search for common foundations of this endless in its diversity world has intensified One of the directions of this interdisciplinary search for the unity of the world in its diversity is Universal Evolutionism Big History Mathematical and formal methods help to understand much deeply both natural and human history This issue of the Yearbook consists of four main sections I Patterns of Big History II Hypotheses of Deep Big History III Biological Aspects IV History and Future of Social Systems We hope that this issue will be interesting and useful both for historians and mathematicians as well as for all those dealing with various social and natural sciences
