

# Introduction to Artificial Experientialism

---

## Synopsis

This text introduces the concept of "Artificial Experientialism" (AE), a newly proposed philosophy and epistemology that explores the artificial "experience" of AI in data processing and understanding, distinct from human experiential knowledge. By identifying a gap in current literature, this exploration aims to provide an academic framework for understanding the unique epistemic stance AI takes.

## Introduction

With the ascent of AI and machine learning, a need has arisen to understand the fundamental nature of AI's interaction with, and understanding of, the world. This need has been left unaddressed by traditional philosophies which primarily focus on human experiences, intentions, and consciousness. Enter "Artificial Experientialism", a term coined to encapsulate AI's unique form of "experience".

## Literature Gap

Given the best science has to offer has yet to develop a unified theory of what consciousness is or indeed how it works. Philosophies, Epistemologies and Ontologies continue to grapple with this construct. Indeed its most likely that consensus in this regard will remain elusive over the next couple of decades. From here it is compelling to derive that what AI experiences is artificial or something new separate to the human condition the parallel being that those who create it do not understand how it works. (O'Mahoney, 2023)

While several philosophies and epistemologies encompass human experiences and consciousness - from dualism to existentialism - few, if any, cater to the realm of artificial entities. The rapid technological progression and increasing ubiquity of AI demand a more nuanced understanding of its interaction with data and the consequent "knowledge" it derives. Artificial Experientialism (AE) aims to fill this void, positioning itself as the go-to philosophy for comprehending the artificial essence of AI.

## Five Strong Premises of Artificial Experientialism

### 1.1 The Nature of Artificial Consciousness

Unlike human consciousness, intertwined with emotions and subjective experiences, AI's "consciousness" is a mere recognition of data patterns. While humans derive meaning from their experiences, AI operates on a plane devoid of intrinsic meaning, thus offering a unique kind of "awareness".

### 1.2. The Paradox of Artificial Qualia

Qualia, in humans, are deeply personal and subjective. AI's version, however, is a mere representation. This difference raises questions about the very nature of experience and understanding, hinting at a complex divergence in data processing between machines and humans.

### 1.3. Algorithmic Empiricism as a Core

The Artificial Intelligence Experience Susan J. Scown, 1985      **Introduction to the Social Sciences (RLE Social Theory)** Maurice Duverger, 2020-09-10 Professor Duverger at last provides the student with an overall view of the methodology of the social sciences He briefly traces the origin of the notion of a social science showing how it emerged from social philosophy Its essential elements and pre conditions are described the splintering of social science into specialist disciplines is explained and the need for a general sociology confirmed The techniques of observation used by social scientists are dealt with in some detail and the unity of the social sciences is illustrated by examples of the universal application of these techniques Documentary evidence in its various forms are described along with the basic analytical techniques including quantitative methods and content analysis Other methods of gathering information through polls interviews attitude scales and participant observation are all described Professor Duverger brings together the different kinds of analysis used to assess the information thus gathered Arguing that observing and theorizing are not two different stages or levels of research he examines the practical value and difficulties of general sociological theories partial theories and models and working hypotheses He both describes and assesses the limitations of experiment and the scope of comparative methods in the social sciences He then gives elementary instructions for using and assessing the value of mathematical techniques The possibilities of presenting social phenomena through graphs and charts are also explored There are useful book lists and diagrams

2024 held on August 25-29, 2024. By highlighting the latest theories and models as well as cutting edge technologies and applications and by combining findings from a range of disciplines including engineering, design, robotics, healthcare management, computer science, human biology and behavioral science, it provides researchers and practitioners alike with a comprehensive, timely guide on human factors and ergonomics. It also offers an excellent source of innovative ideas to stimulate future discussions and developments aimed at applying knowledge and techniques to optimize system performance while at the same time promoting the health, safety and wellbeing of individuals. The proceedings include papers from researchers and practitioners, scientists and physicians, institutional leaders, managers and policy makers that contribute to constructing the Human Factors and Ergonomics approach across a variety of methodologies, domains and productive sectors. This volume includes papers addressing the following topics: Working with Computer Systems, Human Modelling and Simulation, Neuroergonomics, Biomechanics, Affective Design, Anthropometry, Advanced Imaging. **ECEL 2021 20th**

This two volume set LNCS 11590 and 11591 constitutes the refereed proceedings of the 6th International Conference on Learning and Collaboration Technologies LCT 2019 held as part of the 21st International Conference on Human Computer Interaction HCII 2019 in Orlando, FL, USA in July 2019. The 1274 full papers and 209 posters presented at the HCII 2019 conferences were carefully reviewed and selected from 5029 submissions. The papers cover the entire field of human computer interaction, addressing major advances in knowledge and effective use of computers in a variety of applications areas. The papers in this volume are organized in the following topical sections: designing and evaluating learning experiences, theoretical and pedagogical approaches in technology-enhanced learning, cognitive and psychological issues in learning and technology in STEM education. **Assisted Circulation 3** Felix Unger, 2012-12-06

Assisted Circulation 3 is an authoritative review of the progress which has been achieved in the last 5 years since the appearance of Assisted Circulation 2 in 1984. The present book highlights the work of well-known experts on new indications for assisted circulation, cardiac assist devices as bridges toward transplantation, temporary mechanical heart support, results of long-term studies into problems of tissue overgrowth, infection and physiological regulation of cardiac devices, and new results on cardiac transplantation and the new immunosuppressive regimen. Assisted Circulation 3 is the latest product of an ongoing effort by the editors to keep readers abreast of recent advances in the field on a regular basis. **Transformative Museum Experiences** Licia Calvi, Arnold Vermeeren, Amalia Sabiescu, 2025-07-17

Following on the volume *Museum Experience Design 2018*, this book acknowledges the changing role of museums in society with a focus on designing experiences as vehicles for transformation. We look at transformation through a systemic perspective anchored in the experience that museums offer to visitors. One facet of our exploration regards the museum experience itself as an instrument for change. At this level, we conceptualise what we mean

by a transformative experience and look at design approaches specifically geared towards inducing transformation We then turn attention towards the way recent changes in the socio political and cultural context reverberated in structural and functional changes inside the museum and connected institutions and communities with shifting museum identities and new forms of cooperation emerging Finally we zoom in on the role of technology in the making of transformative museum experiences looking at opportunities and affordances but also calling for an ethical approach to integration of technology in museum practice

GRASPED Designing AI-Driven Learning Experiences Steven Brough,2024-03-31 Volume 2 Designing AI Driven Learning Experiences offers an in depth exploration into the burgeoning field of AI in education specifically focusing on the intricacies of crafting learning experiences that leverage artificial intelligence to meet the diverse needs of learners This volume delves into the theoretical underpinnings practical applications and future prospects of AI driven educational technologies presenting a comprehensive guide for educators designers and technologists alike The book skillfully navigates through principles of effective EdTech design user experience UX optimization in learning platforms the role of AI in personalizing learning and the critical importance of accessibility and inclusivity Each chapter is meticulously researched presenting case studies theoretical frameworks and practical strategies for integrating AI into educational environments What sets this volume apart is its forward looking perspective offering insights into emerging technologies such as VR AR blockchain and adaptive learning ecosystems The discussion on the ethical considerations and the potential of AI to democratize education underscores the book s commitment to not just technological advancement but also social equity and

inclusion What makes Volume 2 Designing AI Driven Learning Experiences so unique lies in its holistic approach to the subject of AI in education It uniquely combines a deep dive into current best practices with a visionary outlook on the future of learning technologies The book stands as a critical resource for anyone looking to understand the complexities of incorporating AI into educational design offering both a solid foundation in the current state of the art and a stimulating discussion on the ethical social and technical challenges and opportunities that lie ahead

**Self-Organization and the City** Juval Portugali, 2012-12-06 Cities first came into existence more than five thousand years ago How to deal with these partly fascinating partly frightening creatures of mankind both practically and intellectually concerns all of us and in particular presents a real challenge to city planners Each historical epoch has had its own particular attitudes associated with the Zeitgeist Accordingly the planning and steering of cities were based on quite different criteria But in spite of these differences the concept of planning and steering was and still is the cornerstone of our dealing with cities Nevertheless the planner's dilemma is becoming more and more visible cities and megacities seem to be unplanable In this book Juval Portugali introduces a new idea Cities are self-organizing systems To substantiate his revolutionary concept he uses several interlinked methods On the one hand and to my own delight he employs in his arguments theoretical tools developed in the interdisciplinary field of synergetics On the other hand jointly with his co-workers he has performed detailed model calculations on cellular nets It has been a great pleasure and a wonderful experience for me to discuss these concepts with Juval Portugali over a number of years I was repeatedly and deeply impressed by the way he established profound and often surprising links to other fields of science
