The Face of the Earth J. Donald Hughes, 2015-05-11 Although the organizing principle of virtually every world history text is development the editor of this volume maintains that this traditional approach fails to address the issue of sustainability By adopting the ecological process as their major theme the authors show how the process of human interaction with the natural environment unfolded in the past and offer perspective on the ecological crises in our world at the beginning of the 21st century Topics range from broad regional studies that examine important aspects of the global environment that affect nations to a study of the widespread influence of one important individual on his nation and beyond The authors take different approaches but all share the conviction that world history must take ecological process seriously and they all recognize the ways in which the living and non living systems of the earth have influenced the course of human affairs

The River Runs Black Elizabeth Economy, 2004 China's spectacular economic growth over the past two decades has dramatically depleted the country's natural resources and produced skyrocketing rates of pollution Environmental degradation in China has also contributed to significant public health problems mass migration economic loss and social unrest In *The River Runs Black* Elizabeth C. Economy examines China's growing environmental crisis and its implications for the country's future development Drawing on historical research case studies and interviews with officials scholars and

activists in China Economy traces the economic and political roots of China's environmental challenge and the evolution of the leadership's response. She argues that China's current approach to environmental protection mirrors the one embraced for economic development devolving authority to local officials opening the door to private actors and inviting participation from the international community while retaining only weak central control. The result has been a patchwork of environmental protection in which a few wealthy regions with strong leaders and international ties improve their local environments while most of the country continues to deteriorate sometimes suffering irrevocable damage. Economy compares China's response with the experience of other societies and sketches out several possible futures for the country. BOOK

Environmentalism under Authoritarian Regimes Stephen Brain, Viktor Pál, 2018-10-26. Since the early 2000s authoritarianism has risen as an increasingly powerful global phenomenon. This shift has not only social and political implications but also environmental implications. Authoritarian leaders seek to recast the relationship between society and the government in every aspect of public life including environmental policy. When historians of technology or the environment have investigated the environmental consequences of authoritarian regimes they have frequently argued that authoritarian regimes have been unable to produce positive environmental results or adjust successfully to global structural change if they have shown any concern for the environment at all. Put another way the scholarly consensus holds that authoritarian regimes on both the left and the right generally have demonstrated an anti-environmentalist bias and when opposed by environmentalist social movements have succeeded in silencing those voices. This book explores the theme of environmental politics and authoritarian regimes on both the right and the left. The authors argue that in instances when environmentalist policies offer the possibility of bolstering a country's domestic nationalist appeal or its international prestige authoritarian regimes can endorse and have endorsed environmental protective measures. The collection of essays analyzes environmentalist initiatives pursued by authoritarian regimes and provides explanations for both the successes and failures of such regimes looking at a range of case studies from a number of countries including Brazil China Poland and Zimbabwe. The volume contributes to the scholarly debate about the social and political preconditions necessary for effective environmental protection. This book will be of great interest to those studying environmental history and politics environmental humanities ecology and geography. **China Review 2000** Chung-Ming Lau, Jianfa Shen, 2000.
